### SUPPLY OF FILTERED WATER TO THE COSSIPUR-CHITPUR MUNICIPALITY.

#### MUNICIPAL DEPARTMENT.—MUNICIPAL.

*Dated Darjeeling, the 27th June 1895.*

RESOLUTION No. 219T.—M.

READ—

A memorandum No. 34M., dated the 23rd May 1895, from the Commissioner of the Presidency Division, forwarding a copy of a letter, No. 170, dated the 9th May 1895, from Rai Gopal Chandra Mookerjee Bahadur, c.e., Chairman of the Cossipore Chitpur Municipality, reporting the completion of the work of laying pipes for the supply of filtered water to that Municipality.

Read also—

The previous correspondence on the subject.

The project of supplying the Cossipore-Chitpur Municipality with filtered water has been under consideration since the year 1881-82, and it formed part of a general scheme of water-supply for the late Suburban Municipality, which included the area now constituted into the Cossipore-Chitpur Municipality. In that year an arrangement was concluded between the Corporation of Calcutta and the Commissioners of the Suburban Municipality for the daily supply of filtered water by the Corporation to the Suburbs to the extent of four million gallons at cost price. On the basis of this arrangement, a scheme was prepared by Mr. R. B. Buckley, Superintending Engineer, for the distribution of the water in different parts of the suburbs. The scheme was approved by Government, and in order to enable the Suburban Municipality to collect the necessary

funds to carry it out, Government relieved it of half the police charges, amounting to Rs. 38,000 a year. By June 1888 a sum of Rs. 1,20,000 was thus collected, and the Suburban Commissioners then decided to carry out Mr. Buckley's scheme in the Maniktala, Baliaghata, Ultadanga, and Cossipore-Chitpur sections of the Municipality.

2. About this time the scheme for the amalgamation of a portion of the Suburbs with Calcutta was being elaborated, and in view of this it was considered desirable that the work of laying down the pipes for the extension of the water-supply should be entrusted to the Engineer to the Calcutta Corporation. Application was accordingly made by the Suburban Commissioners for the services of that officer, but the Corporation refused to render any assistance in respect of the area which was not to be amalgamated with Calcutta, holding that the amalgamation had put an end to the arrangements for supplying water to the whole suburban area. This gave rise to considerable controversy, and the Commissioners of the Cossipore-Chitpur section of the late Suburban Municipality, which was excluded from the amalgamation scheme and constituted a separate Municipality, claimed (1) a proportionate share of the water-supply fund which had accumulated up to the date of the disintegration of the late Suburban Municipality, and (2) the supply of 500,000 gallons of water daily at cost price, this being the proportion allotted to them under Mr. Buckley's original scheme. The Calcutta Corporation refused to recognize these claims, and on the matter being referred to Government, it was decided, so far as the first claim was concerned, that the Cossipore-Chitpur Municipality was fairly entitled to one-eighth of the balance of the water-supply fund, which, after the adjustment of a claim of the Calcutta Corporation of Rs. 20,000 as interest on the outlay on a 48-inch main which was provided for the extension of the water-supply, amounted to Rs. 1,00,000. Thus the Cossipore-Chitpur Municipality received from the Corporation Rs. 12,500 as their share of the water-supply fund. As regards the second claim, a compromise was effected between the Calcutta Corporation and the Cossipore-Chitpur Municipality, the former agreeing to supply the latter with 310,000 gallons of filtered water daily, allowing 10 gallons per head per diem on an ascertained population of 31,000, to be raised to a maximum of 350,000 gallons, at the rate of 4 annas per 1,000 gallons, the rate at which the Maniktala Municipality is supplied.

3. The cost of the works which were necessary in order to bring this quantity of water from the Tallah pumping-station, and to distribute it throughout the main thoroughfares of the Cossipore-Chitpur Municipality, was estimated by Mr. Kimber, the Engineer to the Calcutta Corporation, at Rs. 93,948, of which Rs. 73,983 was for pipes, hydrants and meters, Rs. 15,492 for labour for laying and joining pipes, and Rs. 4,873 for contingencies. On the 16th November 1894, the Commissioner of the Presidency Division reported to Government the adoption, by the Commissioners of the Cossipore-Chitpur Municipality, of Mr. Kimber's plans and estimates. The Commissioners had meanwhile called for tenders for the execution of the works, and of four firms of engineers and contractors who responded to this call, that of Messrs. Martin and Company submitted the lowest tender. They offered to do the work for Rs. 80,202, and to complete it within four months. They further agreed to remain responsible for the satisfactory working of the pipes, &c., for a period of six months after completion of the works. The approval of Government, under section 79 of the Bengal Municipal Act, III of 1884, as amended by Act IV of 1894, to the plans and estimates, was communicated on the 18th December 1894, and the Commissioners of the Cossipore-Chitpur Municipality were advised, on the recommendation of the Sanitary Board, to accept Messrs. Martin and Company's tender, which they did on the 1st January 1895.

4. The Chairman of the Cossipore-Chitpur Municipality now reports that the entire work, which involved the laying of pipes along nearly  $12\frac{1}{4}$  miles of roadway, and the erection of 72 standposts, meters, &c., was completed by the contractors in 90 days, and that on the 1st April 1895 he opened the sluice which connected the Cossipore-Chitpur Municipality with the Calcutta Waterworks. Since that date no defect has been found in the pipes, though the standposts have required some alteration, and no breakdown in the works

is apprehended. In order to provide funds for the maintenance of the works and the payment of the price of the water, it is proposed to levy a water-rate at 3 per cent. on the annual value of holdings which are situated within a radius of 1,000 feet from the nearest hydrant.

5. The mere fact that it has taken fourteen years of discussion and negotiation to provide a Municipality, which practically forms part of Calcutta, with a supply of filtered water, clearly illustrates the difficulty of obtaining combined action in schemes affecting the interests of several local authorities. That the Cossipore-Chitpur project has at length become an accomplished fact is in a great measure due to the energy and perseverance of the Chairman of that Municipality, Rai Gopal Chandra Mookerjee Bahadur, c.e., who, besides strongly advocating the cause of the Municipality in this matter in his capacity as Chairman, has rendered to it and to the residents of Cossipore-Chitpur valuable service in his capacity as a professional engineer, by voluntarily undertaking the supervision of the entire works without any charge, thus saving the Municipal fund the cost of supervision, which was estimated at Rs. 3,600. It is also due to his careful administration of the affairs of the Municipality that the cost of this great undertaking has been met from the Municipal fund without the necessity of raising a loan. The Lieutenant-Governor desires to place on record his appreciation of the good work done by Rai Gopal Chandra Mookerjee Bahadur, and to express his satisfaction at the accomplishment of a sanitary work which is certain to prove of lasting benefit to the residents of the Cossipore-Chitpur Municipality.

ORDER—Ordered, that this Resolution be published in the *Calcutta Gazette*, and that copies of it be forwarded to the Commissioner of the Presidency Division for information and for communication to the Commissioners of the Cossipore-Chitpur Municipality; to the Sanitary Board; to the Sanitary Commissioner, Bengal; and to the Government of India in the Military Department, for information.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,  
Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE SANITARY COMMISSIONER,  
BENGAL, FOR 1894.

## MUNICIPAL DEPARTMENT-SANITATION.

*Calcutta, the 1st July 1895.*

RESOLUTION—No. 26078.

## READ—

The Report of the Sanitary Commissioner, Bengal, for the year 1894.

## Read again—

The Report of the Sanitary Commissioner, Bengal, for 1893, with the Resolution of Government recorded theron.

The opening paragraphs of the report review the progress of sanitation in Bengal in a tone of complacent optimism which is by no means borne out by the record of the year's administration. This note runs through the entire volume, which is further disfigured by looseness in the handling of statistical data, and a tendency to quote unconfirmed opinions in proof of doubtful propositions to an extent which seriously detracts from its value. After careful study of the materials compiled by Dr. Gregg, the Lieutenant-Governor can find no grounds for the assertion that the year 1894 is conspicuous for a great advance in the direction of sanitary reform. No doubt, more attention is paid to the subject than was the case some years ago, and local bodies are beginning to realise the value of a pure water-supply. But little more than a beginning has been made, and the bulk of the people, not excepting a large proportion of the educated classes, still regard attention to the most essential details of sanitation as an inconvenient hobby which has been forced upon them from without, and which they themselves look upon with distaste or indifference. Sir Charles Elliott fully recognises the energy which the officers of the Sanitary Department have devoted to a somewhat thankless task, but he cannot agree in thinking that the results of the past year are such as to offer any reasonable grounds for proclaiming the birth of a new era.

The chief sanitary event of the year was the opening of the Arrah water-works, for which the district is mainly indebted to the energy of the Collector, Mr. Skrine, and the liberality of Raja Rajeswari Pershad Singh of Surajpura, whose public-spirited conduct has been rewarded by His Excellency the Viceroy and Governor-General of India by the conferment of the title of Raja. The filter beds which were at first found to act imperfectly, have been reconstructed with fine sand, and the water is now believed to be excellent and popular. The Magistrate has reported that cholera prevailed in the town in August, and that in the parts of the town where the pipe-water was used, greater immunity was enjoyed than elsewhere. The evidence, however, on this point is not strong, as the water had not then come into very general use.

2. The births registered in Bengal during 1894 numbered 2,332,247, giving a birth-rate of 32·81 per mille, against Birth-rate. 2,534,859, or 35·66 per mille in 1893. The birth-

rate therefore was 2·85 less than that of the previous year, and 2·07 less than the death-rate of the year under report. The following statistics, comparing the chief provincial birth-rates for 1894, show not only that Bengal, which stood third on the list in 1893, has now fallen to fifth, but that, while the standard of all other provinces has risen, Bengal alone exhibits a marked decline in this respect:—

Punjab ... ...	43·93	Bengal ... ...	32·81
North-Western Provinces ...	39·70	Assam ... ...	31·09
Central Provinces ...	38·82	Burma ... ...	28·0
Bombay ... ...	35·08	Madras ... ...	27·7

Notwithstanding this falling off, and although the recorded birth-rate stands condemned by the mere fact that it is over two per thousand less than the death-rate, and 18·99 less than the birth-rate of 51·8 estimated for Bengal by the English actuary Mr. Hardy,\* the Sanitary Commissioner, who in 1891 himself

\*Census of India, volume II, Appendix III. estimated the normal birth-rate at something over 40 per thousand, now expresses his satisfaction at the progress made in registration, and maintains that

births were more carefully recorded than in any previous year. The only attempt made to justify this apparent paradox consists of a vague reference to the general unhealthiness of the season, as affecting the birth-rate, and of the suggestion that when malaria is prevalent, many premature births probably occur. The latter hypothesis can neither be proved nor disproved; but even if it be assumed to be correct, the alleged cause can hardly have operated on so large a scale as to reduce the recorded births by more than 200,000. As for the former, it may be observed that in his report for 1893, Dr. Gregg showed that the largest number of births occurred in the three most unhealthy months of the year, while the statistics given in paragraphs 20 and 28 of the present report, interpreted as he proposes to interpret them, fail to establish any uniform correspondence between an increase in the death-rate and a decline in the birth-rate of particular months. January, for example, with the highest increase in mortality, shows a substantial rise in the birth-rate; while October, which in 1893 had the largest increase in the ratio of births along with the highest mortality, now shows a nominal increase in mortality and a large decline in the birth-rate. It would, however, be fruitless to discuss the question further, for it is obvious that, even if it be conceded that a single unhealthy season affects fertility—an assumption which is believed to be open to doubt—the consequent reduction of births could not, in the great majority of cases, take effect before the following year. It may be added that the variations of the birth-rate in different months are probably determined to some extent by the seasons regarded as lucky or unlucky for marriage as well as by climatic conditions affecting the general health of the population.

3. In both 1893 and 1894 births were registered in 147 towns, with Registration of births—Towns. a population of 3,453,465, but the number of births recorded in 1894 was 78,644, giving a ratio of 22.77 per 1,000 of the population, as compared with 90,743, or a ratio of 26.27 per 1,000 in the previous year. Everywhere the standard of registration shows a marked falling off. The recorded birth-rate exceeded 40 per mille in the towns of Jamalpur (47.98), Chatra (46.83), Lohardaga (43.45), Bihar (41.02), and Sasaram (40.06). In seven towns it was between 35 and 40, in twenty-one between 30 and 35, and in sixty-four 20 to 30. It was below 20 in no less than fifty towns, as compared with 17 in 1893; while Jhalakati, South Barrackpore and Nasirabad showed less than ten per mille, the figures being 6.34, 7.88, and 8.39, respectively.

These results are very defective, and the Sanitary Commissioner should now take the subject up carefully, in communication with the civil authorities, and should ascertain precisely what arrangements are in force in each place which fails to register births effectively, and the reasons of the failure.

4. Births were registered in 553 rural areas with a total population of Registration of births—Rural areas. 67,616,768. The total number registered was 2,253,603, against 2,444,116 in 558 such areas, with a population of 67,616,178 in 1893. The birth-rate was 33.32 per thousand of population, as compared with 36.14 in the previous year. The highest rates for the rural areas in a district were obtained from Palamau (43.82), Backergunge (43.75), and Hazaribagh (40.27), and the lowest rates were recorded in Manbhum (25.94), Purnea (27.33), 24-Parganas (27.81), Darjeeling (28.33), Singhbhum (28.93), Jessore (28.74), Hooghly (28.83), Midnapore (29.72), and Shahabad (29.34). In all the remaining rural areas the birth-rate varied from 30.02 in the district of Burdwan to 39.33 in Lohardaga. Although births were registered all over Bengal, excepting the South Lushai Hills and the new district of Angul, the Compulsory Registration Act is only in force in towns.

5. The total male births in both urban and rural areas numbered Births according to sex. 1,202,323, and female births 1,129,925, giving a proportion of 106 male births to every 100 female births, against a proportion of 107 in the previous year. The Sanitary Commissioner observes that the proportion of male to female births is the same as has been ascertained to prevail in France and the German Empire, and refers to this correspondence as proving that the registration of births is fairly accurate. But, even if there were no independent reasons for doubting the accuracy of birth registration in Bengal, Dr. Gregg's inference is obviously unsound. Until

a sufficient body of really accurate statistics has been collected and examined, it is impossible to say that the normal proportion of male to female births in India bears any definite relation to that which prevails in Europe ; and the facts now put forward merely prove that a set of figures known to be very incomplete happens to bring out the same ratio as statistics collected elsewhere under very different conditions. This may be nothing more than an accidental coincidence, due to the well-known tendency to regard girls as less important than boys. But even if the proportion given be the true one, which is quite possible, that would only show that the number of births not reported is much the same for both male and female children. In no case could the accuracy of the birth statistics, as a whole, be inferred from the possible accuracy of the proportion of male to female births.

6. The total number of deaths registered during the year was 2,479,096

Registration of deaths. as compared with 2,005,463 in 1894, giving a rate of 34.88 to 1,000 persons living, as against 28.21 in

1893. The following statement compares the provincial death-rates for the last two years:—

	1894.	1893.
North-Western Provinces	42.51	24.10
Central Provinces	37.22	27.70
Punjab	36.52	28.13
Bengal	34.88	28.21
Bombay	32.26	27.20
Assam	30.69	30.28
Burma	24.0	21.58
Madras	20.0	19.3

Judged by these figures, the year 1894 seems to have been decidedly an unhealthy one for the whole Empire, and although the Bengal statistics of mortality are still considerably below the average death-rate of 44.8 per thousand, as estimated for Bengal by Mr. Hardy, the increase of 6.67 per thousand in the past year does no doubt in some measure correspond to the true increase of mortality, the more so as in a notably unhealthy year the reporting agency is usually more on the alert, and more closely supervised by the district and sanitary authorities. It is difficult, however, to follow the Sanitary Commissioner in his attempt to account for the unhealthiness of the year by reference to its meteorological conditions. In those parts of the Province where cholera is attributed to the defective rainfall of June, July and August, the returns show that, with a single trifling exception, the amount of rain that fell was substantially in excess of the normal quantity. Similarly, the theory that the enhanced fever mortality was caused by excessive rainfall in the last quarter of the year, seems to overlook the every-day experience that fever is a slow-acting disease, and that people who fall ill towards the end of one year, probably die in the earlier months of the next year.

7. Deaths in urban areas increased from 30.03 in 1893 to 35.34 in the year under review, the figures ranging from 82.33 in

Deaths in towns. Chaibassa to 10.57 in Jhalakati. Jagdispur (74.78),

Buxar, Bhadreswar, Dumraon, and Bansberia returned rates of more than 60 per thousand; fifteen other towns showed more than 50; and thirty more had a death-rate between 40 and 50 per thousand. Altogether 33 out of 147 towns returned a death-rate in excess of 44.8 per 1,000, the normal rate referred to above. It is observed that of the 21 towns which return a death-rate in excess of 50 per thousand, only six are situated in the unhealthy tract described by the Sanitary Commissioner at page cxxxviii of the Report.

The towns named in the margin return figures below 20 per 1,000, and in Baruipur, Darjeeling, Khulna, all of them, except perhaps Darjeeling, the registration of vital statistics demands the attention of Cossipore-Chitpur, Siriganj, Nalchitt, Pabna, Manikatala, Jhalakati. the local officers. In Darjeeling it seems probable that the actual death-rate is low, this result being due partly to the healthiness of the town, and partly to the character of the population, which is largely made up of immigrants from Nepal and from various parts of the plains of India. A large proportion of these are not permanently domiciled in Darjeeling, and the tendency is for them to leave the place and go home when they fall ill. Deaths, therefore, among this class, as among the similar class in Calcutta,

are excluded from the Darjeeling death-rate, while at the same time such quasi-residents go to swell the population on which the rate is calculated.

The death-rate of Calcutta is shown in the report to be 32·92 per thousand, a rate which, if it could be accepted without qualification, would compare favourably with 35·94, the recorded mortality for Bengal towns, especially if allowance be made for the latter figure materially understating the true facts. The Sanitary Commissioner seems to have no misgivings on either of these points, and observes :—“ Now that mufassal death registration is approximating (*sic*) accuracy, the figures begin to show the true relative mortality which is in favour of Calcutta.” But it may fairly be assumed that the record of mortality in the mufassal is at least ten per cent. below the truth, for there is no reason to suppose that Bengal towns have a death-rate lower by nearly 9 per thousand than the average estimated death-rate for the province ; it would probably be nearer the truth to put their average death-rate at 50. In the case of Calcutta, the statistics may be taken to be fairly accurate, but it is doubtful whether the recorded death-rate gives a correct idea of the healthiness or unhealthiness of the town. The aggregate death-rate is, as stated above, 32·92, but this is made up of a mortality of 28·83 among 446,746 males, and of 40·70 among 234,814 females. The male population contains a large proportion of temporary residents who have their fixed homes elsewhere, and who tend to leave Calcutta directly they fall sick, unless they are struck down by acute diseases, such as cholera or small-pox. The female population, on the other hand, is comparatively stationary, and it seems probable, therefore, that their death-rate more truly represents the mortality actually caused by the conditions of life in Calcutta. In other words, females who contract a fatal illness in Calcutta die, as a rule, in the town, and their deaths contribute to the record of mortality ; males, on the other hand, often go home to die, and their deaths are recorded elsewhere. It is believed that a more searching analysis of the mortality among different races and classes in Calcutta would confirm this conclusion ; but the data for such an examination are not given in the Sanitary Commissioner’s Report, and the Lieutenant-Governor hopes that the annual report of the Calcutta Corporation will afford materials for dealing more fully with the question.

#### 8. The death-rate in rural areas increased from 28·12 in 1893 to 34·85

##### Deaths in rural areas.

Lohardaga-Toto	...	...	76·85

healthy districts as regards rural areas were Shahabad (52·95), Gaya (46·99), Monghyr, Darjeeling, Saran, Muzaffarpur, Palamau, Patna, Champaran, and Bhagalpur.

9. The death-rate of males per thousand of population was 37·16 and of females 32·61, against 29·91 and 26·53, respectively, in the previous year.

**Deaths according to sex.** The difference is larger than in 1893, and may be partially accounted for, as in the case of birth registration, by the fact that males are deemed more important than females, and their deaths are more accurately reported. It is probable, however, that this cause does not account for the whole of the difference. In his note on age distribution and rate of mortality in India, already referred to, Mr. Hardy has shown that the death-rate is much lower among females in the first year or two after birth, but that the difference between the sexes diminishes until, between six and seven, the mortality is the same. From this point, females die more rapidly than males, especially between fifteen and twenty, after which, female

mortality again approaches the male, until, at the age of thirty-six, the rates are once more equal. After thirty-six female mortality is lower than male for the remainder of life. On the basis of these calculations, which correspond in the main to the results arrived at in Europe, Mr. Hardy estimates the death-rate for males in Bengal during the ten years 1881—1891 at 45·9 per thousand living, and for females at 43·8, showing a difference of 2·1 per thousand in favour of the latter. This difference is much the same as in England. It may be added that the jail statistics for 1894 show the death-rate of males to be 32·4 and that of females 28·1, and although in this case the great disparity of numbers (18,956 males against 1,086 females) detracts from the value of the latter figure, it is obvious that women in jail are to a great extent removed from the influence of the causes which contribute largely to female mortality during the period of sexual maturity. The following table shows the death-rate in Bengal according to age during 1894 and the previous year:—

	IN 1894.			IN 1893.	
	Deaths.	Rate per mille.		Deaths.	Rate per mille.
1	2	3	4	5	
Under one year ...	486,640	212·22	429,676	187·38	
1 year and under 5 years ...	357,810	44·80	291,959	36·56	
5 to 10 years ...	201,209	18·77	161,461	15·06	
10 to 15 "	111,906	14·43	91,352	11·78	
15 to 20 "	108,605	18·45	91,676	15·58	
20 to 30 "	242,468	20·88	189,377	16·31	
30 to 40 "	238,162	23·59	180,873	17·91	
40 to 50 "	212,684	31·13	162,684	23·81	
50 to 60 "	191,475	47·09	142,689	35·09	
60 years and upwards ...	328,137	85·48	263,716	68·70	

The statistics show a large increase in the death of infants under one year of age, the ratio being 212·22 per mille, as compared with 187·38 in 1893.

10. During the year 1,923 persons were convicted for neglect to register births and deaths at the registering circle. Result of convictions for failure to report. The amount of fines imposed was Rs. 2,657·15, and the persons warned numbered 452, against 1,000 persons convicted, with fines of Rs. 1,316, and 268 persons warned in the previous year. Amongst the persons convicted, two were imprisoned for seven days, one for ten days, and three sentenced to simple imprisonment for one month each. There appears to have been no case instituted in the districts of Chittagong, Lohardaga, and Palamau. The grand totals of the statement in Appendix III should have been made out and compared with the totals of 1893.

11. The following table shows separately the death-rate from the principal diseases during the year, compared with 1893 and the previous five years, 1889—93:—

CAUSES OF DEATH.	In 1894.			In 1893.			In 1889—93.		
	Urban.	Rural.	Combin-ed.	Urban.	Rural.	Combin-ed.	Urban.	Rural.	Combin-ed.
1	5	6	7	2	3	4	8	9	10
Cholera ...	8·88	8·29	8·82	2·18	1·76	1·78	8·48	2·60	2·65
Small-pox ...	·18	·11	·11	·19	·20	·20	·39	·20	·21
Fever ...	19·19	25·62	25·32	16·88	20·98	20·78	18·89	19·14	18·86
Dysentery and diarrhoea	3·84	·67	·82	2·98	·45	·57	2·90	·56	·67
Injury ...	·50	·42	·43	·49	·43	·44	·47	·41	·42
Other causes ...	7·73	4·70	4·85	7·28	4·27	4·42	7·13	3·56	3·74
All causes ...	35·34	34·85	34·88	30·08	28·12	28·11	27·78	26·50	26·56

It will be seen from the above that, with the exception of fever, the death-rate from all other causes is highest in urban areas. The reason assigned by Dr. Gregg is the same as was given in the year previous—that in towns the crowding of persons together leads to the fouling of air, water and soil, and to the consequent increased propagation of infectious diseases. The excessive increase under cholera and fever is especially noticeable, and is discussed at length below. The statement in paragraph 26, comparing the incidence of disease in the four chief divisions of the Province, is interesting so far as it goes, but it should be drawn up for a period of ten years, and the average death-rate should be calculated for the longest period for which approximately accurate figures are believed to be available. The same method should be applied to the statistics of the principal diseases for each district.

12. The total number of deaths from cholera recorded during 1894 was 236,150, yielding a ratio of 3.32 per thousand of Cholera population, against 126,976 deaths, or 1.78 per mille

in the previous year, while for the five years 1889—93 the average was 188,421, or 2.65 per thousand. If these figures can be trusted, the death-rate from cholera was considerably in excess of that recorded in the previous year. Allowance must, however, be made for the tendency, noticed by Dr. Crawford of Monghyr, to include cases of simple diarrhoea in the returns, and it is probable that this tendency is greater in a year when cholera is prevalent. The worst months for cholera were May, June, July and August in Bihar, May, July and August in Orissa, and June, July and August in Chota Nagpur. In Bengal proper the disease prevailed most largely in the first four months of the year. The Sanitary Commissioner observes that the cholera of June, July and August in Bihar, Chota Nagpur and Orissa "was caused by the defective rainfall in these months," adding that the high temperature favoured the growth of the cholera microbe. The latter statement takes for granted the truth of a hypothesis believed to be still under discussion; while as to the former it should be remarked that during June, July and August the rainfall in the areas referred to (except in Orissa during August) exceeded the normal amounts by proportions varying from 8 to 54. In individual districts the highest death-rates from this disease occurred in Palamau (11.16), Shahabad (9.44), Champaran (8.25), Gaya (7.64), Muzaffarpur (5.16), Balasore (4.93), Darbhanga (4.74), and Monghyr (4.49); while in Darjeeling the mortality was only .08, and in Lohardaga, Jalpaiguri, Rangpur, and Bogra it was below 1 per mille, or .09, .35, .44, and .76, respectively.

In paragraph 36 of his report, the Sanitary Commissioner gives a table comparing the death-rate from cholera in each district during 1894 with the rate for 1893, and the average rate for the five years 1889—93, and observes that "Palamau, Shahabad, Champaran, Gaya, Muzaffarpur, and Monghyr, which during the past six (? five) years have not been afflicted with a high rate of cholera mortality, suffered very severely during the year under report, whilst Puri and Purnea, which are notorious for their cholera mortality, suffered very slightly during the year under report in comparison with past years." These remarks illustrate the danger of drawing conclusions from averages calculated for comparatively short periods. In Purnea, for example, though the average for 1889—93 is 4.44, the statistics of mortality for the ten years 1884—93 yield an average death-rate of only 2.64, which compares favourably with Champaran (2.96), Shahabad (2.85), and Gaya (2.65), and certainly does not bear out the Sanitary Commissioner's remark that the district is notorious for its cholera mortality. Conversely Dinajpur, which, on the figures for ten years, shows an average mortality of 8.64, the highest in the whole province, is entered in Dr. Gregg's five-year table with a death-rate of only 1.08. The sanitary arrangements at fairs seem to have been effective, and no outbreak of disease occurred at any of these gatherings. As regards pilgrims, it is stated that District Boards and other local authorities have done a great deal to improve the water-supply along the road to Puri, by sinking wells and improving tanks. In Bankura and Midnapore no epidemic occurred, and the fall of the Puri death-rate from 6.19 (average for ten years) to 2.10 speaks for itself. The Sanitary Commissioner quotes an interesting extract from a report by the Civil Surgeon of Puri, arguing that but for deaths among pilgrims and the effect, both direct and indirect, that the influx of pilgrims has upon the health of the resident population,

the town would be among the healthiest in Bengal. Dr. Banks deserves great credit for the admirable sanitary work that he has done in Puri, and the Lieutenant-Governor hopes that the construction of closed wells along the Jagannath road, the improvement of the town conservancy, and the cleansing of the sacred Swetganga tank, which has now been vigorously taken in hand by the religious community in Puri, will result in a great diminution of preventable disease. The Magistrate of Balasore, Mr. Brajendra Nath De, writes that no "disease of any kind broke out amongst" the pilgrims passing through the district, but the Lieutenant-Governor cannot reconcile this with the fact that Balasore stands sixth in the order of cholera mortality for the province, or with the Magistrate's statement that 40 cases of cholera, of which 40 ended fatally, occurred among the pilgrims.

13. Deaths from small-pox during 1894 numbered 8,404, or .11 per mille, against 14,531, or .20 per mille in the previous year, and an average of 15,075, or .21 per thousand of

Small-pox.

population in the five years 1889—93. The mortality of the year from this cause was the lowest on record. The highest death-rates are returned from Cuttack (.88 per mille), Calcutta (.59 per mille), Monghyr (.50 per mille), and Puri (.42 per mille), while Darjeeling and Khulna reported two deaths, Rajshahi one, and Malda none. Of the total number of deaths from this disease, 5,652 were among children, of whom 1,642 were under one year. The whole subject will be reviewed at length in dealing with the Vaccination Report.

14. As is always the case, fever was the principal cause of mortality registered in the Province throughout the year. The total number of deaths recorded was 1,799,833, or 25.32 per thousand of population, against 1,477,288, or 20.78 in 1893, and an average of 16.83 in the ten years 1884—1893. The following statement compares the death rate of 1894 with the death-rate of 1893, and with the average rate for the ten years 1884—1893:—

Number.	DISTRICTS IN ORDER OF MORTALITY IN 1894.	RATIO PER 1,000 OF POPULATION OF—			Increase or decrease as compared with 1893.	Increase or decrease as compared with 1884—93.	Districts in order of average mortality for the years 1884—93.	Average death-rate, 1884—93.
		1894.	1893.	Ten years, 1884—93 (average).

Average for the Province		25.32	20.78	16.83	4.54I	8.49I		16.83

NOTE.—The districts printed in italics are those included in the "unhealthy tract" described in Appendix VI, page ccxxxviii.

The striking point is the high mortality of the Bihar districts, which represents a marked increase in relation to the death-rate of last year, and still more to the average mortality of the preceding ten years. This latter figure is no doubt somewhat understated by reason of defective registration, but this cause in so long a period has probably affected most districts to much the same extent, and may therefore be disregarded for purposes of comparison. Taking Bihar as a whole, the mortality of the year from fever was 30·66 as compared with 21·44 in 1893 and 19·09 in the five years 1889—1893. The corresponding figures for Bengal Proper are 23·12 for 1894, 21·97 for 1893, and 19·89 for 1889—1893. It is not easy to gather from the report precisely what hypothesis the Sanitary Commissioner inclines to adopt in explanation of this rise in fever mortality. In one place he quotes with approval the remark of the Civil Surgeon of Patna that the excessive late rains were the probable cause of the large increase in malarial fevers; while in the next paragraph further extracts are cited to show that the increase was due to impeded drainage and irrigation. It is likely enough, though it has not yet been proved to be the case, that the excessive use of canal water irrigation may affect the healthiness of certain areas in Shahabad, but the same cause is appealed to by the Civil Surgeon of Saran where the area irrigated by canals amounts to the minute figure of 1,568 acres in 1893-94, and 3,560 acres in 1892-93. Embankments of rivers again, where they raise the water level above the protected country, may have a similar effect, but whatever the operation of this factor may be, it must be uniform from year to year, and cannot reasonably be appealed to for the purpose of explaining variations taking place from one year to another. As for the heavy rains in the autumn of 1894, it is notorious that malaria is a slow acting cause, and excessive rains in the months of October and November of one year could hardly affect the fever mortality of that year. While so little is known about the origin of malaria, speculation as to the reasons of increased fever mortality can hardly fail to be futile. All that can be said is that throughout Bengal fever was extremely prevalent, and that the mortality was highest in Bihar. This may have been due to excessive rainfall in the autumn of 1893, but cannot have been due to the heavy rains of October and November 1894.

The following registering circles show a death-rate in excess of 40 per thousand :—

District.	Circle.	Death-rate.
Darjeeling	Siliguri	55·57
Rajshahi	Godagari	43·05
Jalpaiguri	Salbari	44·11
	Alipore	42·43
Shahabad	Jagdispur Town	51·46
	Buxar	44·59
	Mohanea	43·96
	Buxar Town	43·33
	Kharghar	41·10
	Dumraon	40·02
Muzaffarpur	Mahuwa	41·88
	Hajipur	40·52
Darbhanga	Dalsingsarai	41·08
	Nagarbasti	40·36
	Samastipur	40·02
Monghyr	Tegra	48·18
	Jamalpur	46·55
	Surajgarh	41·98
	Begusarai	41·83
Hazaribagh	Gawan	41·14
Lohardaga	Toto	45·04
Burdwan	Dainhat Town	46·85
Nadia	Santipur	42·63
	Birnogar Town	40·63
Murshidabad	Assanpur	46·80
	Manullabazar	43·23
	Gorabazar	42·93
Jessore	Bangaon	42·31
	Gaighata	41·24

The areas shown in italics are situated within the "unhealthy tract" already referred to. It is curious, however, to observe that Assanpur, Manullaba-

zar, Gorabazar and Bangaon which are singled out by Dr. Gregg as peculiarly liable to malarial fever, show lower death rates both from fever and from all causes in the unhealthy year 1894, than in the comparatively healthy year 1893.

In the divisions of Dacca, Chittagong and Orissa no registering circle recorded a death-rate of 40 per thousand. In Northern Bengal, taken as a whole, the fever mortality was 29·86, and all along the base of the Himalayas the death-rate from fever was high, the maximum (55·57) being attained in the Darjeeling Terai (Siliguri registering circle), which showed a general death-rate of 64·67 per thousand, while the Kurseong circle showed 31·07, the Darjeeling rural circle 35·37, and Darjeeling town 19·79. Efforts are being made by the Deputy Commissioner, Mr. R. T. Greer, to alleviate this inevitable evil. A new outdoor dispensary was opened in September 1894 at Naxalbari, a large village in the most unhealthy part of the Terai, and eleven centres have been started in the fever-stricken portions of the district for the sale of cheap quinine. It seems probable that the increased death-rate recorded in this part of Bengal, is due partly to the improvement in registration effected by the introduction of chaukidars, and partly to the influx of fresh settlers and labourers on tea-gardens, who are more susceptible to the local fever than the indigenous population.

15. The total number of deaths from dysentery and diarrhoea during the year was 58,812, or .82 per thousand of population, Mortality from other causes. against 41,150 or .57 per mille in 1895. Darjeeling, returned the highest death-rate (6·13), and was followed by Calcutta (4·60), Howrah (4·27), Balasore (3·80) and Puri (3·77). The same four districts headed the list in 1893. The death-rate rose in Urban areas from 2·98 to 3·84, and in rural circles from .45 to .67. Deaths from injury during 1894 numbered 30,715, or .43 per mille, against 31,311, or .44 per mille, in the previous year. The total number of deaths from causes other than cholera, small-pox, fever, dysentery and diarrhea, and injury was 345,182, or 4·85 per mille, during the year, as compared with 314,207, or 4·42, in the previous year.

16. The following table shows the total expenditure incurred by municipalities for sanitary purposes during the year :—

HEADS OF EXPENDITURE.	Total expenditure.		Difference.	
	1893.	1894.	Increase.	Decrease.
1	2	3	4	5
On conservancy, including latrine	Rs. 3,79,699	Rs. 4,06,030	Rs. 26,331	.....
Ditto establishment	3,81,946	3,91,943	9,997	.....
On drainage	1,83,190	2,74,218	91,028	.....
" water-supply	2,14,516	4,28,421	2,13,905	.....
" disposal of the dead	6,613	7,380	767	.....
" market and slaughter-houses	21,818	15,356	....	6,462
" vaccination	18,908	18,568	.....	340
" treatment of sick	2,62,426	3,07,865	45,439	.....
" other sanitary works	1,44,844	2,37,045	92,201	.....
Total	16,13,960	20,86,826	4,79,668	6,802
On construction, maintenance, and repairs of roads.	5,00,882	5,03,881	2,999	.....
Total including roads	21,14,842	25,90,707	4,82,667	6,802
Net increase	.....	.....	4,75,865	.....

As the subheads of this statement do not correspond with those of Form III annexed to the annual Resolution on the Municipal Reports, it is difficult

to say exactly what value should be attached to them. The accounts of the municipalities are kept for the financial year, and the attempt to draw up for the purposes of the Sanitary Commissioner's report, special statistics dealing with the calendar year, must inevitably lead to many mistakes and misunderstandings. The only course which will guarantee the presentation of correct figures seems to be to base this section of the report upon the last financial year, and to make no attempt to correlate the statistics with the mortality. In no case is it likely that expenditure on sanitary objects incurred during 1894, could produce any appreciable effect on the mortality of that year; while such expenditure incurred during the financial year 1893-94 might conceivably bring about an improvement which would make itself apparent during the calendar year 1894. For purposes of comparison therefore, nothing will be lost, while there will be gained the great advantage of knowing that the figures are correct. The Sanitary Commissioner should report specially on this suggestion.

The statement in paragraph 68 of Dr. Gregg's report, purporting to show the proportion of municipal income spent by each municipality on original and annually recurring sanitary works, confuses expenditure met from Capital with expenditure from Revenue, so that the figures do not lead up to the conclusion aimed at. The town of Arrah, which heads the list, as having devoted 77.73 per cent. of its municipal income to original works, in reality took a large loan from Government for the construction of its water-works. It is therefore misleading to quote Arrah as the municipality which has devoted the largest percentage of its income to sanitary works of an original nature. The value of the new statement included in paragraph 71 is greatly reduced by the doubts that must be felt as to the accuracy of the average mortality entered in column 6. In every case the figures of column 6 are based wholly or in part on statistics collected during the years when registration was conducted by municipal agencies, and was shown to be quite untrustworthy. It is, moreover, not clear how the average entered in column 5 is calculated.

17. Appendix V attached to the report contains a list showing the improvements carried out in towns and rural areas in Bengal during the year by District Boards, municipalities, and private individuals. The improvements effected were the provision of filtered water, the sinking, excavation and cleaning out of wells and tanks, the construction of urinals and latrines, and the construction and cleaning out of surface drains, &c. The total cost of the works undertaken and completed by District Boards and municipalities during 1894 is stated at Rs. 3,86,051, against Rs. 2,17,729 in 1893, while that of those in progress in towns is estimated at Rs. 93,451, against Rs. 3,79,196 in the previous year. It is impossible to check these statistics, and Dr. Gregg himself qualifies them by the statement "as far as the figures have been supplied." It is satisfactory to hear that the District Board of Backergunge is setting aside Rs. 10,000 a year for digging new tanks, and that the District Board of Burdwan proposes to undertake the drainage of a large number of villages in the unhealthy thana of Parbasthali. The cost of works carried out by private individuals during the year was Rs. 2,51,453, against Rs. 3,69,889 in 1893. These figures contradict the too sanguine conclusions put forward by the Sanitary Commissioner in paragraph 1 of his report as to the increased number of wells and tanks. With regard to the important question of the disposal of night-soil, the Lieutenant-Governor trusts that the Sanitary Commissioner may be justified in thinking that considerable improvement has taken place in the manner in which night-soil is trenched. Sir Charles Elliott's own experience leads him to entertain doubts on this point. Reports have lately been received of a very distressing character regarding the condition of some of the trenching grounds in the neighbourhood of Calcutta.

18. The Sanitary Board transacted a large amount of business during the year, and in particular the following important preliminary estimates have passed through their hands:—

- (1) A drainage scheme for the Hooghly Municipality, estimated to cost Rs. 1,00,000;

- (2) a scheme for supply of filtered water to the Berhampur Municipality, estimated to cost Rs. 2,25,000; and
- (3) schemes for the supply of filtered water to the town of Midnapore, estimated to cost Rs. 4,10,000 if the supply be at the rate of 20 gallons per head per diem, or Rs. 2,90,000 if the supply be fixed at 10 gallons.

Of the above schemes, the second ought to be carried out without much difficulty, as the Maharani Surnamoyee, c.i., has undertaken to pay for the entire cost of the scheme, on condition that it does not exceed Rs. 2,21,000. The preparation of the detailed drawings, however, has been postponed until the Board are satisfied that the river Bhagirathi will be a suitable source of supply for the scheme, and this cannot be done until the quality and quantity of water has been tested when the river is at its lowest level. The Midnapore scheme was inspected by the Lieutenant-Governor in February last, and is a promising project: the cost of water-supply per head of population will be exceptionally low if the bottom of the proposed reservoir is found capable of retaining water. This question will be decided by the results of the experiment now being carried on.

Other projects which came under the Board's consideration were those for the supply of filtered water to the municipalities of Cossipore-Chitpur and Maniktola (since completed), for extending the water-supply of Bhagalpur, for the provision of settling tanks in Darjeeling (since completed), for a drainage scheme for Comilla, and for damming the river Bhairab at Jessor to form a lake. The principal work of the Sanitary Engineer has been the preparation of the plans and estimates for the Howrah water-works. This important project is now well in hand, and it is believed that the work will be completed during the current year.

Surveys for sanitary works were made in the municipalities of Howrah, Ranaghat, Kushtia, Rajpur, Gaya, Kalna, Nadia, Santipur, and Kumarkhali, towards which more or less help has been given by the Sanitary Board. Other municipalities have applied for the services of trained surveyors, but the Sanitary Engineer has not been able to recommend suitable men in all cases, and improvements of this class are delayed for want of competent candidates for employment. Good hopes are entertained of procuring an effective water-supply for Gaya from wells sunk in the bed of the river, but the scheme is as yet only in its initial stage. The thanks of the Lieutenant-Governor are due to the President and Members of the Board, and to the Sanitary Engineer, for the useful work done by them during the year.

19. Brigade-Surgeon Lieutenant-Colonel Gregg, who was in charge of the department throughout the year, spent 155 days on tour during the year, which is less by 25 days than the prescribed period. During this time he inspected 32 municipalities and attended to various sanitary questions. In the Metropolitan and Eastern Bengal Circles, Drs. Moir and Oldham spent 181 days on tour; the officers in charge of the Western Circle were out for 192 days; and Dr. Deare, who acted as Deputy Sanitary Commissioner of the Northern Bengal Circle, and also held charge of the important Vaccination Depôt at Darjeeling, made a tour of 202 days.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,  
Secretary to the Govt. of Bengal.

**RESOLUTION ON THE ANNUAL REPORT ON EMIGRATION  
FROM THE PORT OF CALCUTTA TO BRITISH  
AND FOREIGN COLONIES FOR 1894.**

**GENERAL DEPARTMENT—EMIGRATION.**

*Darjeeling, the 25th June 1895.*

RESOLUTION—No. 188T.G.

**READ—**

The Annual Report on Emigration from the Port of Calcutta to British and Foreign Colonies for the year 1894.

Dr. R. Macleod held the appointment of Protector of Emigrants from the commencement of the year up to the 3rd April, when he proceeded on furlough for eight months; he resumed charge of the office on the 8th December, Surgeon-Major E. Dobson having officiated for him in the interval. The report was punctually submitted. As usual, it is illustrated with two maps, which are intended to show in different colours—one the districts in which emigrants were registered, and the other the districts in which they were born. But by an unfortunate error incorrect figures have been used for the district population, so that both maps are misleading.

All things considered, the Lieutenant-Governor is of opinion that these two maps, even were they correct, would not add materially to the value of the report, and directs, therefore, that they need not be furnished in future years.

2. The most important amendment made during the year in the rules framed under Act XXI of 1883, related to the administrative measures storage of water which is dealt with in rule 113.

In the rules published in 1886, the storage of water in the after-compartments of an emigrant ship (which form part of the hull of the vessel, as opposed to the hold) was permitted subject to certain conditions. Subsequently it was decided to withdraw this permission, as it was feared that the water might be rendered brackish by the leakage of the salt water. But before these orders were enforced, the question was re-opened, and it was decided during the year under review that the storage of water in such compartments should be permitted, provided, among other things, that they are divided by water-tight bulkheads into three separate divisions of a capacity not exceeding 3,000 gallons each. A notification to this effect was published on the 18th May 1894.

In addition to this, certain of the forms prescribed by the rules were amended; in one case, in order to facilitate enquiries for heirs to vacant estates of deceased emigrants by ensuring the registration of the residence of the next-of-kin; and secondly, in order to record, among the descriptive particulars of each emigrant embarked for any colony, the nature of his occupation in India.

3. Seven agencies—six British and one Dutch—were engaged in 1894 in collecting and despatching labourers to the colonies; Requisitions and despatch of labourers. In the previous year the number had been eight, but this year no emigrants were sent to St. Lucia.

The number of adult labourers indented for showed a large increase of 4,128 compared with the previous year, the figures for the two years being 10,510 and 14,638 respectively; the increase was shared by all colonies, except St. Lucia :—

NAME OF COLONY.	1893.		1894.	
	Indent.	Supply.	Indent.	Supply.
1	2	3	4	5
Demerara	...	5,450	4,959½	6,675
Trinidad	...	1,800	1,807	3,000
St. Lucia	...	150	150	Nil.
Jamaica	...	472	469½	624
Mauritius	...	465	350	470
Natal	...	361	547½	1,700
Fiji	...	700	750	950
Surinam	...	1,112	1,034½	1,219
Total	...	10,510	10,068	14,638
				14,865

(N.B.—Two children under 10 years of age are reckoned as one adult.)

The supply exceeded the demand in every case except in those of Trinidad ( $62\frac{1}{2}$ ), Mauritius (2), and Surinam ( $66\frac{1}{2}$ ). The deficiency of the last-named colony was made good in the shipment of January 1895. No emigrants were required by the colonies of Nevis, St. Kitts, St. Lucia, St. Vincent, Grenada, nor by the French colonies.

4. The terms of engagement of intending emigrants were the same as in the previous year. Certain changes were proposed Terms of engagement of intend- and agreed to in regard to the terms offered to ing emigrants. emigrants to Demerara and Trinidad, but it was decided not to give effect to them until the season of 1895-96.

5. The number of licenses granted to recruiters rose from 866 to 1,023 in the year under review, being an increase of 157. Recruiting operations. It was found necessary to cancel 6 of the licenses during the year on account of the misconduct or unfitness of the recruiters.

The number of intending emigrants registered was 26,707, so that, notwithstanding the increase in the number of recruiters, the average number of emigrants obtained by each recruiter rose from 17 in 1893 to 26. Of the total number, 26,707, 2,508, or 9·39 per cent., were registered in Bengal, 3,712, or 13·89 per cent., in Bihar, 14,167, or 53·04 per cent., in North-Western Provinces, and 6,320, or 23·66 per cent., in Oudh, the percentages in the previous year being, respectively, Bengal 16·98, Bihar 14·13, North-Western Provinces 49·60, and Oudh 19·28. The largest number of registrations were made in Faizabad (3,088), followed by Benares (2,787), Cawnpore (2,359), Allahabad (2,257), 24-Parganas (2,005), and Shahabad (1,917).

Classifying the persons registered by the locality of their birth, we find that only 12·4 per cent. of the whole are residents of Bengal and Bihar, 50·7 per cent. of North-Western Provinces, and 33·35 per cent. of Oudh, the remaining 3·5 per cent. being natives of other provinces. Taking individual districts, Basti supplies the largest number of emigrants, viz. 2,693, followed by Gonda and Azamgarh; Shahabad stands fourth with 1,500. None of the 2,482 persons registered in the 24-Parganas, in Calcutta, Burdwan or Howrah appear to have been residents of those districts.

6. Besides the 26,707 emigrants registered during the year, there were 380 remaining in the sub-depôts from the previous History of intending emigrants year, so that in all there were 27,087 to be subsequent to registration. accounted for. Of this number 3,181, or 11·74 per cent., were rejected as unfit before despatch to the Calcutta depôts. Others, numbering 1,945, died, deserted or were otherwise accounted for before starting on the journey to the depôts: 927, or 3·4 per cent., were unaccounted for, 400 remained at the sub-depôts, so that 20,634 were despatched: 3 were born on the journey, and deducting the casualties on the road, the number which actually reached the depôts in Calcutta was 20,471, or 75·5 per cent. of the original number.

The total depôt population of the year was 21,181, which represents the number who arrived there during the year, plus those pending from 1893, born in the depôts, &c. Of this number 1,602, or 7·56 per cent., were rejected at the depôts as unfit, 2,232 died, deserted or failed to proceed for other reasons, 15,924, or 75·18 per cent., were despatched to the colonies, and 1,423 were in the depôts at the close of the year. The percentage of emigrants ultimately despatched to the colonies on the number registered this year, or pending from last, was 58·78, compared with 70·52 in the previous year.

This unsatisfactory result points to injudicious and perhaps dishonest recruiting in the first place and inefficient supervision in the second place. It is the most noticeable feature in the operations of the year—a feature that causes the Lieutenant-Governor the more regret in that in previous years he has drawn attention to similar results only to find that the evil has increased rather than diminished. At a rough calculation, it took 27,000 recruits to supply 16,000 emigrants. These figures indicate not only waste of money, but also distress and discomfort among the rejected recruits, involving unsettlement and breaking up of domestic ties to no purpose. The remedy lies in more frequent inspections of the sub-depôts in the mufassal, in closer supervision over the work of the recruiters, and in devising some method of punishing recruiters for registering unsuitable or recusant coolies.

An examination of the detailed figures shows that, of the total number of registered emigrants, 18·92 per cent. were rejected before leaving the sub-depôts for their destination in Calcutta, and 14·15 per cent. were rejected or unable to proceed after their arrival at the depôts, the corresponding figures for the previous year being 13·86 and 12·80 per cent., respectively. If there are to be rejections, the earlier they take place the better, and the figures for this year (viz. 3,181 such rejections, as against 1,464 in 1,893) contain this one satisfactory element, that they indicate a more careful inspection of emigrants at the sub-depôts.

The number of registered emigrants unaccounted for has risen from 345 or 2·28 per cent. to 927 or 3·4 in the present year. The hope expressed in the Resolution on the work of 1893, that the introduction of registers in the sub-depôts would effect an improvement in this respect, has not been realized. It is obvious that there is always liable to be a small number of coolies unaccounted for, representing those who, having been registered before the close of the year under report, fail to reach any sub-depôt until the following year has commenced; but that there should be any large number points to a lack of organization and of hold over the recruiters and the managers of the sub-depôts.

7. A statement is given in paragraph 21 of the report comparing the numbers registered in certain districts of recruitment

Comparison between the recruiting for the colonies and the labour districts, in certain districts.

in the Lower Provinces for despatch to the Assam labour districts and to the colonies, respectively.

The conclusion arrived at is, that there is little or

no competition between the recruiting agents of the two labour markets. But this conclusion is vitiated by the fact that no account is taken of free emigration, which supplies the greater portion of the labour to Assam, and for which, as far as the district of origin is concerned, no exact figures are available.

8. Surgeon-Major A. W. D. Leahy, the Medical Inspector of Emigrants, Sanitation and management of Calcutta, has nothing but praise for the sanitary arrangements and management of the depôts. But the record of sickness and mortality among the coolies was not so favourable as in 1893, as can be seen from the following figures:—

YEAR.	Total strength.	Admissions into hospital.	Percentage.	Deaths.	Percentage.
1	2	3	4	5	6
1893	...	13,220	359	2·71	.10
1894	...	21,181	824	3·89	.51

The exceptional sickness and mortality is ascribed by the Medical Inspector generally to the greater unhealthiness of the past year up-country, and particularly to the excessive number of weakly children admitted into the depôts. The statistics of mortality in the jails and amongst the general population show that the year was, indeed, unhealthy, but not to such an extent as to warrant the very great rise that occurred in the death-rate in the depôts. The mortality among infants was very serious, 39 having died against 26 born in the depôts. The chief causes of sickness were malarial fevers, 285 cases and 15 deaths; dysentery 113 cases and 16 deaths; chest affections 153 cases and 40 deaths. There were 8 cases of cholera only, of which 6 ended fatally.

9. The number of emigrants embarked for the colonies during the year under report was 15,924 against 10,674 in 1893. Embarkation of emigrants The emigrants were conveyed in 28 vessels, of which 6 were steamers and 22 sailing ships. The longest time occupied on any voyage was by the ship *Arno*, which, with 711 emigrants on board, took 120 days to reach Jamaica. Reports of arrival have been received from 22 ships only up to the present. The aggregate mortality among the coolies on those ships was 210, and the percentage 1·96 compared with 129 and 1·2 respectively in the previous year. There were no deaths on board two of the steamers bound respectively for Mauritius and Natal. In the case of the ship *Sheila* bound for Demerara, the death-rate reached 4·38 per cent., chiefly owing to an outbreak of

measles, which caused 13 or more than half the number of deaths. If the emigrants were healthy when they started, it is not clear how this contagious disease broke out.

10. The attention of the Protector of Emigrants is invited to the return received on the 14th June from the Board of Revenue, showing the quantity of lime-juice taken on board for the use of emigrants. The rule is that for voyages west of the Cape the supply should be 40 gallons per hundred emigrants; east of the Cape 15 gallons per hundred. Out of 18 sailing vessels which left Calcutta between April and December, nine took less than the prescribed quantity. The worst cases were the following:—

NAME OF SHIP.	Destination.	Number of statutory adults.	Amount of lime-juice that ought to be taken in gallons.	Amount actually taken in gallons.	Deficiency.
1	2	3	4	5	6
"Jura" ... ..	Demerara ...	515	206	92	114
"Ems" ... ..	Surinam ...	652	260	Nil	260
"Bann" ... ..	Demerara ...	555	222	Nil	222

It is possible that these vessels had already a sufficient stock on board, but it seems hardly likely. It is the Protector's duty to see to this and to ensure that the supply is not only sufficiently large, but sufficiently fresh.

11. In 1894, 3,804 emigrants returned from the several colonies, as compared with 5,173 in the previous year. Except Returned emigrants. in the case of Guadeloupe and Bourbon, to which no emigrants were shipped, all the colonies returned a smaller number of emigrants than they received during the year. From Fiji, however, 1,039 returned as against 1,082 despatched. Five sailing-ships and ten steamers were engaged in bringing back the returned emigrants. The aggregate mortality among them was 82, or a percentage of 2·15 compared with 88 or 1·70 in 1893. The savings brought home aggregated Rs. 5,94,965, yielding an average of Rs. 156 per head, corresponding figures in the previous year being Rs. 7,21,986 and Rs. 139. Those who returned from Natal were, as in the previous year, the most fortunate as regards their average savings, which amounted to the considerable sum of Rs. 231-13-3 per head. Mauritius in both years has proved the least profitable field for emigrants, the average savings amounting only to Rs. 25-1-6 in 1894 and Rs. 16-13-0 in 1893.

12. During the year 498 estates, valued at Rs. 83,093, came under administration. Administration of estates. Of this number, 258 estates, valued at Rs. 29,247, were finally administered 80 of these, valued at Rs. 1,587, lapsing to Government in the absence of heirs. The heirs were traced of the remaining 178 estates, which were finally administered and of 52 others, and a sum of Rs. 52,814 was paid or was in course of payment in respect of them. Enquiry was still proceeding in regard the remaining 188 estates.

Compared with the previous year, there was a decrease of 28 in the number of estates administered, but an increase of Rs. 5,892 in their value. Prompt enquiries are said to be instituted by the Colonial authorities of Demerara, Natal and Fiji, on the decease of an emigrant, but His Honour regrets to learn that this is not the case in Mauritius, where years are sometimes allowed to elapse before the Protector of Emigrants is communicated with. The attention of the Government of India will be drawn to this neglect with a view to its being remedied. The Protector draws attention to the small number of estates that have come under administration from the Colony of Trinidad. In the past five years there have been only 17 such estates in that Colony, while in the same period there have been 540 in British Guiana; in fact, estimating the male adult immigrant population to be 25,000 and 82,000 in each

Colony, respectively, there is one estate to every 1,470 such immigrants in the former colony, and one estate to every 152 in the latter. This result clearly calls for some enquiries. The attention of the North-Western Provinces Government will be invited to the Protector's remarks on the want of village directories for ten districts in Oudh, as these have been found so useful in helping to trace the villages of residence of emigrants.

13. Owing to the large increase in the number of emigrants despatched, Financial. there was a corresponding increase in the receipts, which are derived solely from the fee of Rs. 3 charged for each emigrant. The total reached Rs. 48,456, or Rs. 18,186 in excess of that of the previous year. The expenditure was only Rs. 31,794-14, showing a petty increase over that of 1893. This total includes only the pay of Government officers, *i.e.*, the Protector of Emigrants and the medical officers, and the cost of office establishment and of fees paid to registering clerks. Nothing is known of the cost of emigration to the colonies, which includes the pay of the Agents, the cost of recruiting, and of the voyage, and many other items.

The year closed with a credit balance of Rs. 16,661-2. The Protector of Emigrants suggests that in view of the large balance, it may be possible to reduce the amount of the fee, but the fluctuations in the requisitions for labourers in past years show that the result of one year is not sufficient to justify any action being taken.

14. The Lieutenant-Governor is pleased to record his satisfaction with some branches of the working of the department during the year. The large requisitions from the colonies were fully and successfully met without increased expenditure, but he cannot pass over without particular comment the great number of rejections that occur among the registered coolies. His Honour trusts that this question will receive the personal attention of the Protector and of the Emigration Agents during the year.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,  
*Secretary to the Government of Bengal.*

FIRST FORECAST OF THE JUTE CROP IN BENGAL  
FOR 1895.

THE following is published for general information.

REV. & AGRI. DEPTS., C. E. BUCKLAND,  
*Calcutta, the 2nd July 1895. Secy. to the Govt. of Bengal.*

DEPARTMENT OF LAND RECORDS AND AGRI-  
CULTURE, BENGAL.

*First Forecast of the Jute Crop in Bengal for season 1895 (to the middle of June).*

Returns have been received from 26 districts in which jute is grown in these provinces, viz., from Burdwan, Midnapore, Hooghly, all districts of the Presidency, Rajshahi, and Dacca Divisions, Tippera, Noakhali, Bhagalpur, Purnea, Malda, Cuttack, and Balasore.

1. *Season.*—The rainfall from January to March was deficient, but the deficiency does not appear to have impeded cultivation in the more important jute-growing districts. Throughout the greater part of April rainfall was well distributed, and was generally above the normal. In the early part of the month of May rainfall was more copious over the whole Province than is usual at the beginning of the month. During the last half of May heavy rain fell in East Bengal, but in other districts there was less than the average fall. For the whole month of May Eastern Bengal has received more than the normal, while South-West Bengal, part of Northern Bengal, and Orissa received less than the normal fall. In the first half of June the rainfall was light, but fairly general.

2. *Area cultivated.*—The estimates of normal area cultivated with jute and area cultivated in 1894, as reported in the Final Report of 1894, have been modified in the present return by the Collectors of the 24-Parganas, Bogra and Bhagalpur, hence the difference between the normal and last year's areas under jute as now reported and as returned in the final report on the jute crop of Bengal for 1894 (this Department's note, dated 29th August 1894). The total area in Bengal sown with jute during the current year appears from the district returns appended to this note to amount to 2,268,200 acres against 2,264,300 acres sown in the preceding year. The differences shown in the District Officers' returns between this year's cultivation and last year's are inappreciable; and the areas cultivated are in fact probably about the same.

The six plains districts of the Rajshahi Division have about  $8\frac{1}{2}$  lakhs of acres of jute cultivation; the Dacca, Faridpur and Mymensingh districts have also over  $8\frac{1}{2}$  lakhs of acres; Tippera has over  $2\frac{1}{4}$  lakhs of acres; and Purnea returns  $\frac{3}{4}$ ths of a lakh of acre. These 11 districts together have 20 lakhs of acres out of the whole  $22\frac{1}{2}$  lakhs of acres returned.

3. *Character of the crop.*—Mymensingh, which is the largest jute-growing district, and alone returns an area equal nearly to one-fourth of the whole area under jute, shows a 16-anna crop. Rangpur and Tippera, which have the next largest areas under jute, return 18-anna crops. For the eight districts which stand next in area under jute an outturn of 13 annas to 18 annas is estimated. In the principal jute-growing districts the outturn is estimated to be either equal to or better than that of the crop of 1894. On the whole it appears to be safe to estimate the outturn of the crop of 1895 at 17 annas.

4. *Estimated exports.*—If the crop turns out to be 17 annas, as estimated, the amount available for export, including cuttings and rejections, during the jute season of 1895-96, will probably be at least 36 lakhs of bales, as in the export season which is now drawing to a close.

W. C. MACPHERSON,

*Director of the Dept. of Land Records  
and Agriculture, Bengal.*

CALCUTTA,  
*The 29th June 1895.*

## First Forecast of the Jute crop in Bengal for 1895 (to the 15th June, 1895.)

DIVISION.	DISTRICT.	Remarks by the District Officers.							Remarks by the Department of Land Records and Agriculture, Bengal.
		1	2	3	4	5	6	7	
Burdwan	Burdwan ...	Acre. 11,100	Acre. 10,900	Acres. 11 $\frac{1}{4}$	Annas. 10,900	Annas. 11 $\frac{1}{4}$	Annas. 8	In the Sadar and Kalna sub-divisions, this year's outturn will be less than last year's for want of timely rainfall. The low estimate of outturn (10 annas) in the Katwa and Raniganj sub-divisions is due to the late rainfall, for which cultivation could not be commenced in time.	
Burdwan	Midnapore ...	20,900	10,800	6,100	9 $\frac{1}{4}$	10 $\frac{1}{4}$	There being no rain in time, the area sown with jute crop falls much below that sown last year. As there has been some rain lately, a larger area is likely to be brought under cultivation. The outturn is likely to be the same as last year. In Tamluk it is likely to be better owing to good rain in May.		
Hooghly	... 24-Parganas ...	14,300	12,500	12,000	10	8	For want of periodical rains, the area cultivated is less than in the previous year. The growth of the young plant is also retarded for want of rain. Hence the outturn is also expected to be comparatively low. Serampore return was received incomplete. Hence the return is subject to revision.		
Presidency ...	Kulna ...	42,000	35,400	34,400	13	12	The difference between this year's area under jute and that of last year is due to the want of rain in the beginning of the season, and the fall in the price of jute. Owing to the continued want of rain, the yield of the jute crop is expected to be less than that of the last year.		
							The increase in area is owing to the increase in area in the Satkhira sub-division, and it is owing to timely rains. The outturn for the above reason is expected to be a little better this year than last.		

Rajshahi	...	Bogra	...	76,000	100,000	100,000	14	16	From experience gained of the jute-producing portions of the district during my last year's tour, and from report received from different quarters, it appears that the normal area under jute cultivation in this district was last year not below 100,000 acres, and it was the same this year. Timely rainfall at the time of sowing, and when the plants were little larger, did well for a good outturn.
		Pabna	...	180,900	174,500	175,500	14	17	The high price of jute has caused a slight increase of cultivation as compared with last year. Reasonable rain has caused the crop to grow well, and it appears at present that the outturn will be above the average.
		Darjeeling (plains), Jalpaiguri	...	64,000	64,200	64,900	13½	14	Better outturn is expected on account of reasonable rainfall.
		Dacca	...	219,300	211,900	212,400	13	15	Excessive rainfall during the early stages of cultivation has, it is feared, injured the plant to the extent of 3 annas.
		Faridpur	...	85,000	85,000	85,000	16	16	The increase in area sown this year, as compared with last year's area, is due to the fact that jute proved a profitable crop to the cultivators last year. Owing to favourable weather the outturn is expected to be good.
		Dacca	...	570,800	569,100	558,000	15	16	Owing to the timely rainfall, the outturn is expected to be the same as last year.
		Mymensingh	...	6,400	6,400	6,400	13	12	
		Tippera	...	285,000	212,000	231,200	18	18	There has been reasonable rain, and the crop is thriving. It is expected that this year's outturn will be better than last year's. The slight decrease in this year's area is probably due to the low profits derived from the sale of jute last year.
		Chittagong	...	9,000	9,500	9,500	13	14	Owing to timely rainfall, the outturn is expected to be better than last year.

DIVISION.	DISTRICT.	Remarks by the District Officers.							Remarks by the Department of Land Records and Agriculture, Bengal.
		1	2	3	4	5	6	7	
<i>Approximate area under jute.</i>									
Bhagalpur ...	Bhagalpur ...	Acre. 22,400	Acre. 22,400	Acres. 22,400	Acres. 22,400	Annas. 17	Annas. 13	The delay in the rai fall has interfered with sowings and growth of plants already sown. If the rainfall is not favourable, the outturn will be worse than last year.	In columns 3, 4 and 6, the Collector has changed the figures entered in the final report on the jute crop of 1894.
Purnea ...	Purnea ...	55,200	75,000	75,000	16	16	14	The rainfall has been seasonable and sufficient. If this state of things continues, the outturn is expected to be 16 annas or more.	
Madha ...	Madha ...	45,000	35,500	35,500	16	16	14	Owing to deficiency of rainfall, the area sown this year is less than the normal area, and the outturn is not expected to be more than 14 annas.	
Cuttack ...	Cuttack ...	5,500	4,500	4,500	10	10	14	For want of sufficient rain, the sowing has been retarded. There is every probability of more area being sown, if there be sufficient rain. Prospect of outturn seems better. The figures in columns 5 and 7 are subject to change on completion of sowing.	
Orissa ...	Balasore ...	3,600	2,600	2,300	10	10	12	The decrease in area is due to the want of sufficient rains in some places at the time of sowing. The increase in the outturn is principally due to good rainfall in Bhadrak sub-division at the time of sowing. The decrease as compared with the normal outturn is due to scanty rains.	
Total ...		2,301,600	2,364,300	2,368,300	163 (a)	163 (a)	17 (a)	(a) Estimated by this Department.	

N.B.—Twenty annas represent a bumper crop, 16 annas an average crop, and 12 annas three-fourths of an average crop, and so on.

## WEATHER AND CROP REPORT.

*For the week ending the 1st July, 1895.*

**Burdwan.**—Rainfall at Burdwan .89. Weather stormy. More rain wanted. Cultivation of lands for *aman* rice continues. *Aus* rice doing well. Common rice sells from 10 to 21 seers a rupee.

**Midnapore.**—Rainfall at Sadar 1.19. Weather cloudy. Transplantation of paddy seedlings commenced. Indigo, sugarcane and *til* (sesamum) doing well. More rain required in Panskura. Common rice selling from 16 to 20 seers a rupee.

**24-Parganas.**—Rainfall at Sadar 2.06. Weather seasonable. Prospects of standing crops good. Sowing of *aman* paddy continues. Preparation of lands for transplanting seedlings is in progress. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs.
Sadar	...      ...      ...      11 to 13
Barasat	...      ...      ...      14
Basirhat	...      ...      ...      19
Diamond Harbour	...      ...      ...      15 } per rupee.

**Murshidabad.**—Rainfall .43. Weather seasonable. Sowing of winter rice nearly finished. Prospects of standing crops good. Fodder available. Price of common rice 15 seers per rupee.

**Khulna.**—Rainfall 2.48, Bagerhat .55, Satkhira .85. High winds with occasional rain. Preparation of lands for *aman* rice going on. Weeding of *aus* and jute continues. Prospects of crops good. Price of common rice 17 to 23 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall .35. Weather hot and cloudy. More rain wanted. Price of common rice 15 seers a rupee. Outbreak of cattle-disease reported from Thakurgaon. No complaint for fodder or drinking water.

**Rangpur.**—Average rainfall .30. Weather hot and windy. *Aus* paddy is being harvested. Rain urgently wanted. Prospects favourable provided that rain falls. Rice selling from 10 to 15 seers a rupee.

**Pabna.**—Rainfall .55. Weather hot and cloudy. Prospects of crops good. More rain wanted. Fodder and water sufficient.

**Dacca.**—Rainfall 1.17. Weather hot with rain at intervals. *Aus* rice is being harvested. Rain much wanted. Common rice selling from 12 to 19 seers per rupee. No cattle-disease.

**Chittagong.**—Rainfall 5.37. Weather sultry and hot. Cultivation and sowing retarded in places for want of rain. Water and fodder sufficient. Cattle-disease reported. Prices have slightly risen.

**Patna.**—Rainfall .49. Paddy and *makai* are being sown; the latter has sprouted in places. *Marua* being transplanted in Bihar. Common rice selling at 17 to 18 seers per rupee.

**Gaya.**—Rainfall at Sadar 1.30, but only .31 at Nawada, where *marua* and paddy seedlings are suffering; elsewhere the *bhadoi* crops are coming up. Prices about normal. Fodder and water ample.

**Champaran.**—Rainfall at Motihari 1.37. Prospects of crops fair. Common rice sells at 15½ seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Rainfall .06. More rain urgently wanted for all crops on the ground and also for *bhadoi* sowings. Common rice selling from 16½ to 18 seers per rupee. Fodder and water sufficient.

**Bhagalpur.**—Weather cloudy with occasional light showers. It is reported from Madhipura that the *bhadoi* crops are withering for want of rain, and in Supul the sowing has been retarded. Prospects are better in Sadar and Banka, but in these subdivisions the paddy seedlings have suffered for want of rain. Common rice sells at 17 seers 10 chitaks per rupee. Fodder and water sufficient.

**Purnea.**—Rainfall 1.24. Prospects of *bhadoi* paddy and jute continue good. More rain is urgently wanted for transplantation of *aghani* paddy. Fodder and water sufficient. No cattle disease. Common rice sells from 16 to 22 seers a rupee.

**Cuttack.**—Rainfall 18.49. Sowing of paddy not completed. Lands sown are submerged in water in places on account of excessive rain and flood. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 25 seers per rupee.

**Hazaribagh.**—Weather seasonable. Sowings are in vigorous progress everywhere. Sugarcane doing well. Fodder and water sufficient. Common rice selling at 14 to 16 seers per rupee at head-quarters and 10 to 15 seers at Giridi.

**General Summary.**—The feature of the week was the unusually heavy rain in Orissa, and generally speaking the absence of heavy rain elsewhere. More rain is much wanted, especially in parts of Bihar and North Bengal, though the crops in the ground have not as yet suffered, and the cultivation of the *bhadoi* crops and winter rice continues. In Cuttack the lands sown with rice are submerged in places. *Aus* rice is being harvested in Rangpur and Dacca. An outbreak of cattle-disease is reported from Dinajpur; elsewhere the cattle are in good condition. The price of common rice continues steady.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
*The 2nd July, 1895.*

C. E. BUCKLAND,  
*Secretary to the Govt. of Bengal.*

\* Mean of 5 days.

† Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the humidity of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The arithmetical mean of amounts of rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question.

the week ending Saturday, the 29th of June 1895.

Variation from normal mean.	DISTRICT OBSERVATIONS.													DISTRICT.		
	OF WEEK.				RAINFALL.											
	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	Mean for dis- trict.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Mean for district.	Normal mean.	Variation.	Mean for district.	Normal mean.	Variation.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 29TH OF JUNE 1895.

THE unusual distribution of rainfall which was noted as a prominent feature of the weather during the previous week ending on the 22nd, has continued during the one now under review. The irregularity is even more marked, and is due to a similar arrangement of pressure, viz., relatively low pressure in the north-west of the Bay which has caused the moist sea current to take a more westerly direction instead of over East and North Bengal. The low pressure which continued throughout the week over the north of the Bay, developed into a somewhat severe cyclonic storm during the last few days, and during the existence of this disturbance very heavy rain fell over the whole of Orissa.

On the 23rd, the first day of the week, a local but rather rapid fall of pressure over Orissa resulted in a shallow depression over the north of the Bay and the adjoining land. The depression moved slowly to the westward with a cyclonic circulation of light winds, and caused heavy rain and low temperature in Orissa during its passage. On the 24th the centre of the wind circulation was not far from Chaibassa, where pressure was lowest, but the depression had become very diffused, and rainfall was light even in Orissa. On the 25th there was a slow rise of pressure in Orissa and Chota Nagpur and a slow fall in other districts—changes which, though unimportant in themselves, appear to have led to the beginning of the cyclonic storm towards the end of the week. The immediate result was that the area of lowest pressure was again over the north-west angle of the Bay. Winds were again cyclonic over that area and easterly inland. The depression on the 25th was very slight, as defect at the coast stations in Arakan, Bengal, and Orissa was very little over .05 inch, while in the south of the Bay and in the northern districts of Bengal the distribution was very nearly normal. During these days unusually fine weather prevailed over a great part of the province. The skies were lightly clouded, rainfall scattered, and temperature above the normal by about  $2^{\circ}$ .

On the 26th a fairly rapid fall of pressure prevailed in the east of the Bay, and led to defect of between .1 inch and .15 inch over the part of the Bay between Orissa and Arakan. The depression became more distinct, with its centre in the north-west angle, and cyclonic winds obtained over a considerable area, of moderate strength in the south of the Bay, but very light on its northern side. During the next two days it slowly changed its position, but steadily developed, and weather became squally over the greater part of the Bay. Wind remained south-westerly at Diamond Island, and increased daily in strength, the highest velocity being 20 miles an hour on the 27th and 28th. As the area of lowest pressure moved slowly to the north-westward, very heavy rain fell in Orissa. On the morning of the 27th, Puri reported nearly 8 inches and Cuttack 3 inches. On the 28th pressure fell rapidly at Saugor Island and Balasore, and the centre of the depression passed the coast line between these two stations some time during the day. The lowest readings of the barometer were under 29.2 inches, and the greatest defect was about a third of an inch. On the 29th the centre was near Chaibassa, moving rather rapidly towards the north-west.

While the depression was deepening in the north of the Bay, gradients became gradually steeper over Bengal. On the 26th the difference between the lowest and highest readings at Saugor Island and Jalpaiguri, respectively, was only .08 inch. On the 27th it had increased to .14 inch, on the 28th to .27 inch, and on the 29th the difference between Chaibassa and Dhubri was about .35 inch. This steady steepening of the gradient from north-east to south-west led to strong winds over the whole province. Rainfall was light in all districts except Orissa, Chota Nagpur and the adjacent part of South-West Bengal.

After the centre of the disturbance crossed the coast, strong southerly winds blew on the coast of Orissa and at Saugor Island. The squally weather, however, which followed the area of lowest pressure continued in the north-west angle for but a short time, as this pressure distribution recovered more rapidly than usual.

Pressure has been below the normal throughout the week in the southern districts, but there was a small excess in the north of the province during the early part. As the depression developed there was defect everywhere—greatest at some of the south-western stations, where it became as much as a third of an inch. Mean pressure is therefore below the normal at all stations by amounts varying from .02 inch in the north of the province to .15 inch at Cuttack.

Temperature has been low in Orissa and part of South-West Bengal and Chota Nagpur, but in the other districts, owing to the comparatively clear skies and scanty rainfall, there has been excess throughout the week. Mean defect for the whole of Orissa is  $3^{\circ}6$ , for Chota Nagpur  $2^{\circ}7$ , and for South-West Bengal nearly  $1^{\circ}$ . Elsewhere there is excess—of more than  $1^{\circ}$  in East Bengal and Bihar, and between  $2^{\circ}$  and  $3^{\circ}$  in North Bengal and Assam.

*Rainfall.*—Very heavy rain fell in Orissa on the first day of the week, and again from the 27th to the end of the week. In Chota Nagpur and the western half of South-West Bengal moderate amounts fell during the latter half of the week, while the disturbance existed. Elsewhere very little rain has fallen compared with what usually falls at this season of the year. The average fall in Orissa was 8.93 inches as compared with a normal

fall of 3·24 inches. Chota Nagpur received three quarters of an inch more than the normal, and all the other districts less. The defect in South-West Bengal was less than 1 inch, in Bihar 1·24 inches, East Bengal 2·58 inches, and North Bengal 3·46 inches.

The fall in North Bengal was very little over one-seventh part of the normal.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 29th of June 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.					
	Highest observed during week.		Lowest observed during week.		Averages for week.		Of week.		Rainy days.		Since 1st of month.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	... ... ...	°	20.88

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; p, passing temporary showers.

IRRIGATION DEPARTMENT,-BENGAL.

Sixteen thousand heights over mean sea-level and low-water in the Rivers Ganges, Bhagirathi, Jeltinghee and Brahmaputra, for the monsoon of May 1890.

### RESOLUTION ON THE ANNUAL REPORT ON INLAND EMIGRATION FOR THE YEAR 1894.

GENERAL DEPARTMENT—EMIGRATION—No. 2231.

Calcutta, the 8th July 1895.

#### RESOLUTION.

##### READ—

The Report of the Superintendent of Emigration, Calcutta, on Inland Emigration for the year 1894.

Dr. R. Macleod held the appointment of Superintendent of Emigration from the commencement of the year under review until the 3rd April, and again from the 8th December until the close of the year; Surgeon-Major E. Dobson officiated for him in the interval. The report, following the prescribed lines, traces the journey of each class of emigrants from the recruiting ground to the labour districts. As usual, there are two maps illustrating the districts in which the emigrants say they were born and those in which they were registered. Their assertions as to the district of origin are not of much weight, and the figures of the districts of registration are given on page 4 of the report. The work is practically confined to one district, that of the 24-Parganas, and, this being so, the maps are not required. They should therefore not be inserted in the report in future.

2. There are four distinct methods of recruitment recognised, namely :—

- (1) By contractors licensed under section 12 of Act I of 1882;
- (2) By local agents of the employers of labour, who have been specially authorized by the Superintendent of Emigration under section 62 of the Act to recruit;

- (3) By garden sardars who have been granted certificates by their employers under section 51 of the Act;
- (4) The free emigration system, over which only a sanitary supervision is maintained under Act I (B.C.) of 1889.

Each system is separately treated in the following paragraphs.

3. *Contractors' emigrants.*—There were five licensed contractors during 1894, but two of these closed their business before the end of the year. All the dépôts were situated in the suburbs of Calcutta. There were nineteen recruiters working under these contractors, and they registered 3,237 coolies. The figures of previous years, as entered in the margin, show how steadily this system of collecting labourers is decreasing; what survives of it is merely

	Number of recruiters.	Number of coolies.
1891	47	8,754
1892	31	4,712
1893	24	4,484
1894	19	3,237

a fringe on the edge of the great system of free emigration. Of the 3,237 emigrants registered during the year, 3,073, or 94·9 per cent., were registered in the 24-Parganas though only three of these were natives of that district. The rest of

the labourers admitted into their dépôts were originally recruited for the dépôts of the free contractors established in Calcutta and the 24-Parganas. This constitutes one of the most noticeable features in the report.

5. Out of the whole number of licensed contractors' emigrants (3,237) registered, only 106 were, according to their own statement, residents of the districts in which their registration was effected. This, as the Superintendent correctly remarks, shows how extremely difficult, if not impossible, it must be for the registering officer to obtain correct particulars regarding an emigrant's caste, previous history, and district of origin; it supports the view steadily taken by this Government that registration is not a remedy for complaints about enticement and wrongful confinement, since it does not secure the identification of the emigrant.

The Chief Commissioner of Assam during the current year drew the attention of the Lieutenant-Governor to the frequency with which labourers are misdescribed in their contracts as regards their caste and native district, and enquired whether it would be possible to issue instructions to the effect that, when labourers appear to the registering officer or to the Superintendent of Emigration to be misdescribed as to their caste, age or native district, they shall not be registered or allowed to execute contracts under the Assam Labour and Emigration Act. His Honour, in reply, referred to such facts as are quoted above to show the difficulty of identification, doubted if any official could acquire such knowledge of the physical characteristics of castes and races as to justify him in pronouncing that an emigrant who asserts he is of one race or caste is really of another, and held that even if this were possible in the case of the Superintendent of Emigration at Dhubri, who makes the registration of emigrants a special business, it would be dangerous to give such powers to registering officers all over Bengal.

6. Including one man who remained over from the previous year, 3,238 registered emigrants were accommodated in the sub-dépôts in the mufassal: either before the start or on the journey, 29 of these were released or discharged, and 57 deserted, so that 3,152 arrived at the dépôts in Calcutta, the total casualties on the journey having amounted to 2·62 per cent., as compared with 1·36 per cent. in the previous year. During their accommodation in the dépôts there was a further reduction of 178 or 5·48 per cent., owing to the discharge of 59 emigrants, the desertion of 110, and the deaths of 9; moreover, 64 were remaining in the dépôt at the end of the year, so the number despatched to the labour districts was 3,004. The diminution of numbers during the period of detention in the dépôts was small during the year under report compared with 1893, the percentage being 5·48 as against 9·9; the percentage of sickness, too, (0·86) compares favourably with that of the previous year (1·01), but the death-roll was heavier, having risen from three to nine. The Medical Inspector of Emigrants remarks that the amount of sickness was small, and that, of the nine deaths, five were among children and infants, whose admission to the dépôts in a weakly and ill-nourished condition can frequently not be avoided.

No coolies were rejected as medically unfit to proceed from the dépôts: of the 3,004 who left for Goalundo, none died on the way, one deserted, and

four were released at Goalundo by the contractors or their representatives. Of the remainder, 1,564 arrived at their destination in Assam, having lost three by deaths and one by desertion on the way, and 1,429 reached Sylhet or Cachar with the loss of two deserters on the way.

7. Certain of the local agents who represent the employers of labour and act for them in matters connected with emigration in the recruiting districts, are specially authorized by the Superintendent of Emigration, under section 62 of Act I of 1882, to recruit coolies, dealing direct with them without the intervention of garden sardars. Of this system the Superintendent writes:—"Doubtless the number of employers (of these special local agents) as well as of special local agents will increase yearly, in view of the fact that the latter reside in the districts of recruitment, and carry on their recruiting operations locally under the garden sardar system, and are not under such legal restraints as the licensed contractors."

YEARS.	Number of special local agents.	Number of coolies.
	1	2
1890	4	596
1891	9	779
1892	7	3,217
1893	5	3,500
1894	13	3,921

The figures quoted in the margin show that in the last four years there has been a considerable increase in the number of coolies recruited by this method, and that the tendency to increase continues. The special danger which attends the system concerns the employers of labour rather than Government; it lies in the fact that the special local agents who are empowered to recruit, usually act also as mere 'local agent' to supervise coolies recruited by garden sardars, and the temptation to pass off the garden sardars' coolies as recruited by themselves in their capacity as 'special local agents' is very great, the profits being large and the risk of discovery small.

In last year's Resolution the Superintendent of Emigration was requested to distinguish special local agents' coolies from sardars' coolies, but he has been unable to give the figures separately for more than half the year, so that it will be necessary in this Resolution to deal with the two classes together after leaving the districts of recruitment. In future separate figures for the whole year must be submitted. Of the 3,921 emigrants registered by the special local agents, as many as 3,251 were registered in Manbhumi.

8. There were 5,274 certificated garden sardars during the year under report, and 156 sardarnis, as compared with 4,762 sardars and 104 sardarnis in the previous year. The majority of these sardars, namely 4,007, conducted

their operations under the supervision of local agents of the employers licensed under section 59 of the Act. One of the most noticeable features in this year's report is the very great decrease in the number of licenses issued to these local agents, the number of such licenses having fallen to 17 compared with 127 in 1893, 120 in 1892, 124 in 1891, and 117 in 1890. The decrease, as the Superintendent points out, lies not so much in the number of firms engaged in the business as in the fact that each firm, instead of taking out separate licenses for each recruiting district, confined its attention to one or two districts only. From the report of the proceedings of the fourteenth annual general meeting of the members of the Indian Tea Association it appears that the Association during the course of the year drew the attention of agents, managers and proprietors of tea gardens to the competition which existed in the recruitment of labour and to the multiplication of establishments engaged in this work; the decrease in the number of licenses issued to agents was no doubt in some measure due to the wise policy of the Association in this respect. A sub-committee has, moreover, been appointed to consider what further action can be taken to reduce this competition, which is harmful alike to the coolies and to their employers, and profitable only to the middlemen. This is undoubtedly a move in the right direction: it is mainly to the existence of excessive competition that the fact must be attributed that while a Bihar or North-Western Provinces coolie can be recruited for the Colonies and brought to Calcutta at a cost of little over Rs. 20, he costs Rs. 80 or even Rs. 100 when landed at Dhubri for work in Assam. The result of this change of policy on the number of coolies recruited has so far been unimportant. There was a decrease, but there appears to be no reason to ascribe it to the falling off

in the number of local agents' licenses. The number of coolies recruited by garden sardars amounted to 10,980, compared with 14,266 in 1893.

9. As noted above, in tracing the history of the emigrants on their journey from the recruiting districts to the labour districts, the emigrants recruited by special local agents and those obtained by garden sardars must be considered together, as the figures were not kept separate for the first part of the year. The total number of these two classes of coolies who left the recruiting districts for the journey *via* Goalundo was 14,052: 14 died and 44 deserted or were left behind before their arrival at Goalundo or at Goalundo itself, so that, including one birth on the journey and one remaining over from the previous year, 13,996 embarked for their destination in the labour districts. Of this number 9,813 went to Assam, 1,863 to Cachar, and 2,320 to Sylhet. The total casualties during the journey that occurred between the time of despatch from the recruiting districts to departure from Goalundo yield a percentage of .412—a favourable result, though somewhat larger than the percentage of the previous year, .358.

On the journey between Goalundo and Assam there were no losses from desertion, but there was a heavy death-roll of 16 compared with one only in the previous year. Between Goalundo, Sylhet, and Cachar, 10 emigrants died, compared with one only in 1893. Thus 9,794 were landed at their destination in Assam, 1,852 in Sylhet, and 2,318 in Cachar, the numbers for the previous year being 8,902, 3,089, and 1,635 respectively.

Besides these who chose the Goalundo route, 1,947 sardari emigrants left the recruiting districts for Dhubri. On the way there or at Dhubri itself three were left behind or released, two died from cholera, and the remainder 1,942 embarked at Dhubri for Assam. On the way to Assam five died of cholera, but there were no other casualties, so that 1,937 reached their final destination, compared with 1,563 in 1893.

10. *Free emigrants.*—No record is kept in the recruiting districts of the free emigrants who depart thence, but the Emigration Agents at Goalundo and Dhubri supply figures, more or less accurate, of the numbers who pass through. Their reports show that 25,639 free emigrants left the recruiting districts for Goalundo and 6,237 for Dhubri, giving a total of 31,876 free emigrants, compared with 31,715 in 1893. Out of the 25,639, 30 deserted, 82 were released, and five died on their way to, or during their stay at, Goalundo, the total casualties thus amounting to 117 or .456 per cent., compared with 38 or .160 per cent. in 1893. Thus 25,524 proceeded onward from Goalundo; of these 12,956 bound for Assam embarked for Dhubri, where 12,941 arrived after losing on the way 2 by desertion and 13 by death. The Cachar emigrants lost only one on the road, and reached their destination 3,240 strong. Those who reached Sylhet numbered 9,325, after losing two by the way.

Of the 6,237 emigrants who went straight from the recruiting districts to Dhubri, the losses on the journey numbered 181 or 2.9 per cent., and comprised 105 left behind, 57 desertions, and 19 deaths. The losses in the previous year were 307 or 3.80 per cent., but these included only 3 deaths. The journey beyond Dhubri lies wholly in the province of Assam, and need not be here discussed.

11. In the following statement are set forth the figures connected with the execution of contracts under the Assam Labour and Emigration Act, 1882:—

PLACE.	THREE YEARS.			FOUR YEARS.			FIVE YEARS.			GRAND TOTAL.
	Contractors' coolies.	Special Local Agents and Garden Sardars' coolies.	Total.	Contractors' coolies.	Special Local Agents and Garden Sardars' coolies.	Total.	Contractors' coolies.	Special Local Agents and Garden Sardars' coolies.	Total.	
1	2	3	4	5	6	7	8	9	10	11
Assam	...	541	541	1,224	6,143	7,367	.....	14	14	7,922
Cachar	...	99	99	326	444	770	.....	.....	.....	1,563
Sylhet	...	717	717	21	413	434	.....	.....	.....	1,868
Total 1894	...	816	1,052	2,768	1,571	7,000	8,571	.....	14	11,333
Total 1893	...	573	2,616	3,189	1,456	1,013	2,460	1,270	4,670	5,940

By one of the provisions of Act VII of 1893, which amended Act I of 1882, the execution of contracts of more than four years' duration was prohibited. The fourteen five-year contracts shown in the table were executed in Monghyr by a mistake. Instructions should at once have been issued to the tea districts to which the coolies had been despatched to have the contracts modified. The Lieutenant-Governor desires that if this has not already been done, the Superintendent of Emigration will at once take steps in the matter. During the year 11,353 contracts were executed, 24·4 per cent. being for three years and 75·5 for four years. In 1893 the number was 11,598 and the percentage 26·51 for three, 21·2 for four years, and 51·2 for five years.

Taking the figures for Assam, Cachar and Sylhet separately, 92·9 per cent. of the Assam contracts were for four years, those for Cachar were almost equally divided, 50·7 being for three and 49·3 for four years, while for Sylhet the majority, viz., 76·8 per cent., of the contracts, were for three years only, and the remainder, 23·2 per cent., for four years. The greater accessibility of Sylhet and the facilities for obtaining labour explains the large number of three-year contracts in that place.

12. *Summary.*—The following tables give a synopsis of the movements of the different classes of emigrants towards Assam during the year:—

1	2	SPECIAL LOCAL AGENTS AND GARDEN SARDARS' EMIGRANTS.			FREE EMIGRANTS.		
		For Goalundo.	For Dhubri.	Total.	Goalundo.	Dhubri.	Total.
					6	7	8
Number registered during the year.	3,237	.....	.....	14,901	25,639	6,237	31,876
Add number registered in other provinces.	No	.....	.....	1,098	.....	.....	.....
Number actually travelled during the year.	3,238	14,052	1,947	15,999	.....	.....	.....

		Assam. Cachar. Sylhet. 1,564 477 952	Assam. Cachar. Sylhet. 9,794 1,852 2,318		Dhubri. Cachar. Sylhet. 1,541 3,240 9,325		

It will be seen that there was a considerable falling off in the supply of coolies obtained through licensed recruiters and a slight increase in those recruited under the garden sardar system and under the free system. Taking all classes of emigrants together, the result of the year's operations is an insignificant increase in the number who reached their destinations in the labour districts compared with 1893, namely, from 49,801 to 50,217.

The most noticeable features of the year's report are, first the marked signs of the approaching extinction of the system of recruiting by licensed contractors, secondly the tendency to rely more on the Special Local Agents for the supply of labour, and thirdly the diminution in the number of licenses taken out by local agents.

13. *Casualties.*—Not only was the total number of emigrants who reached the labour districts almost the same in the year under review as in the previous year, but the total number of casualties also varied but little, being 1,724 in 1894 and 1,764 in 1893. The deaths from cholera unfortunately rose from 17 in 1893 to 118 in the year under report, and the deaths from other causes from 25 to 44; the death-rate per mille was 3·11 against 2·85 in 1893. A large proportion of the deaths (103 out of 162) were amongst free coolies. His Honour trusts that the more stringent rules that will shortly issue under Act I (B.C.) of 1889, for regulating the sanitation of free coolies during their journey will bring about a reduction in the mortality in future.

14. The Lieutenant-Governor is pleased to record his satisfaction with the efficient manner in which Dr. R. Macleod, Superintendent of Emigration, and his *locum tenens*, Surgeon Major Dobson, performed their duties during the year, but regrets that no mention is made of any visits of inspection having been paid. In August 1892 the Superintendent was directed to pay such visits and to enquire

locally into any complaints that came to his ears regarding emigration. Such complaints have not been wanting, especially in the direction of Purulia, and the Lieutenant-Governor considers it essential that Dr. Macleod should at least twice a year visit the depôts at Goalundo, Raniganj, Asansol and Purulia, besides making special journeys for the purpose of enquiring into any mal-practices reported. The Commissioner of the Dacca Division writes in very commendatory terms of the work of Dr. Kishori Lal Banerjee, Embarkation Agent and Medical Inspector at Goalundo. Some charges had been made against this officer on the ground of undue interference with the coolies, but these on investigation turned out to be unfounded, and brought him praise, not rebuke. The Commissioner remarked :—

“ That only one case occurred under the Act is, I think, satisfactory proof of the harmonious working of the Act and rules, so far as Goalundo is concerned, and is highly creditable to the Embarkation Agent, Babu Kishori Lal Banerjee, whose conduct of the business leaves nothing to be desired.”

In these remarks His Honour is glad to be able to express his concurrence.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

*Secretary to the Govt. of Bengal.*

## SURVEY AND SETTLEMENT OF THE WESTERN DUARS IN THE DISTRICT OF JALPAIGURI.

REVENUE DEPARTMENT—LAND REVENUE No. 3200.

*Calcutta, the 8th July 1895.*

## RESOLUTION.

## READ—

A letter No. 390T.S., dated 26th June 1895, from the Director of Land Records, submitting the Settlement Officer's final Report of the Survey and Settlement of the Western Duars in the district of Jalpaiguri, together with a Note, dated 24th November 1894, and a letter No. 455, dated 14th May 1895, from the Commissioner of Rajshahi.

1. The Settlement of the Western Duars was begun in 1889, and the assessment was completed in March 1894. The work of copying the records and handing them over in a finished state to the Deputy Commissioner lasted on to the middle of October 1894. The completion report on the settlement was written by that date, and a preliminary copy furnished to the Commissioner, but it was not made over to the Press by the Settlement Officer for final printing until the middle of March 1895.
2. The Report submitted by Mr. D. H. E. Sunder, the Settlement Officer, contains much which is unnecessary and unsuitable in a settlement report, the standard of which is laid down in Rule 11A of Chapter XIII of the Settlement Manual, 1888. It aims too much at providing information which is ordinarily looked for in a District Gazetteer, and it also errs by criticising in an unsuitable and sometimes ignorant manner the working of other Departments respecting which Mr. Sunder did not possess sufficient knowledge. The remarks on Forest Management in pages 15 and 112 are a salient instance of this error. The whole of Chapters IV (Administrative History), VI (the People), VII (Social Life and Religions of the People), VIII (Emigration and Immigration), IX (Education), and X (Sanitary Improvements), though such information is frequently given in Settlement Reports written in the early part of the century, are superfluous in a Settlement Report of this period, and the information contained in Chapter XII (Agricultural Operations), XIII (Agricultural Staples), and XIV (Agricultural Appliances) is of comparatively little value. On the other hand, as regards the pure settlement part, the Report is deficient. The information given as to how and why different rates were sanctioned and applied in the different parganas under settlement is meagre; and the particulars required under sub-heads 1 and 3 of head "III—Comparison of former and present condition of the tract under report" of the Settlement Manual are not consolidated and brought together, but are scattered over many paragraphs. It was very essential for the Settlement Officer to have shown why the present total area differs from the old total; how the cultivated area and the areas of the three principal classes of soil (homestead, rupit, and faringati), compare with the old areas; and how much of the increase in assessment is due to increase of area and how much to increase of rates. These defects have been supplied by the Commissioner, Mr. P. Nolan, to the best of his power in paragraphs 6 to 11 of his Note of 24th November 1894, and in the statement attached to his letter No. 455, dated 14th May 1895; but the figures given in paragraph 13 of this Resolution are more accurate than any others.
3. The tract of country known as the Western Duars of Jalpaiguri was ceded to the British Government by the Bhutan Government in November 1865. It measures 1,209.70 square miles, or 774,208.16 acres, exclusive of tea lands and forest lands, which were not dealt with at this settlement. Out of this, 421.20 square miles, or 269,569.88 acres, were surveyed on a small scale, generally of 2 inches to a mile, and the remaining area cadastrally surveyed is 788.50 square miles, or

504,638·28 acres. The following table gives the number, names, and areas of tahsils and parganas, and number of taluks and jotes in the Western Duars:—

No.	Name of tahsil.	Number of parganas within tahsil.	Name of pargana.	Number of taluks within pargana.	Number of jotes within taluk.	Area cadastrally surveyed.	Total area measured in the estate, excluding tea and forest lands.
1	2	3	4	5	6	7	8
1	Mainaguri	3	Chengmari	18	1,247	58,241·36	81,543·76

			Total	183	11,112	504,638·28	774,208·16
		12					

Pargana Ambari Falakata, though geographically situated in Jalpaiguri, west of the Tista, is included in the Duars.

4. *Origin of tenures.*—Mr. Nolan in paragraph 6 of his Note gives an interesting account (which deserves to be read in *extenso*) of the rents levied by the Bhutan Government and the system of tenures which existed when the country passed from it to the British Government. Under Bhutan land was left rent-free for five years after the forest had been cut, and was then assessed at area rates according to the *hál*, or plough, a local measure of about five acres. In the Sidli Duar (in Assam) (there is no record showing the area rates in the other Duars) the charge was Re. 1-14 per *hál*, or 6 annas an acre for *rupit* land, all other classes of soil being granted to residents free of charge, while strangers were charged Rs. 2-8 a *hál*, or 8 annas an acre, for land of every kind. There were also a special cess on mustard seed, a local rate of 1 rupee a *hál* and 2 rupees a house for *puyas*, a fee for irrigation channels, a "dao-tax" levied from those who temporarily squat in the jungle, a tax on looms, and licenses to trade and ply boats. The demand was realised by tahsildars direct from the jotedars. No information appears to exist as to the total amount of revenue collected by the Bhutanese before the conquest.

5. The first British settlement was made by Mr. W. O. A. Beckett, Deputy Commissioner, in 1871, after a detailed Revenue history. measurement and classification of all cultivated land and of such waste as the jotedars desired to include in their holdings. Area rates were fixed as follows:—

DESCRIPTION OF LAND.	Rent per acre in North Mainaguri.	Rent per acre in the rest of the Duars.
	1	2
Homestead and rupit	Rs. A. P. 1 8 0	Rs. A. P. 1 0 0
Faringati	0 12 0	0 8 0
Waste	0 1 6	0 1 6

The rates for North Mainaguri were the same as those imposed in the Eastern Duars of Assam. Altogether 1+2,127 acres waste and 80,398 acres of cultivation were settled with the jotedars at a revenue of Rs. 86,380, against Rs. 39,526,

the revenue previously paid to Government. This settlement was made for a period of seven years, with effect from April 1871, but it was permitted to stand for two years more. It did not include South Mainaguri, which had been farmed to the Raja of Bykuntpur, and which was, on the expiry of the farming lease, brought under settlement; and the following rates were adopted:—

	Rs. A. P.
Homestead land	2 0 0
Rupit	1 8 0
Faringati	1 2 0
Waste	0 3 0

This settlement, which took effect from 1st April 1876, resulted in raising the revenue of South Mainaguri from Rs. 42,706 to Rs. 65,133.

6. The second settlement of the 11 parganas of the Western Duars (excluding South Mainaguri) was made for 10 years, with effect from 1st April 1880. The rates adopted in South Mainaguri were extended to parganas North Mainaguri, Ambari Falakata, Chengmari, and Moraghat, and the remaining parganas were assessed proportionately lower as being more backward. The rates were as follows:—

DESCRIPTION OF SOIL.	Mainaguri, Ambari Falakata, Chengmari, and Mora- ghat.	Lakhipur, and West Madari.	The remaining parganas.
	1	2	3
Homestead and bamboo	Rs. A. P. 2 0 0	Rs. A. P. 1 12 0	Rs. A. P. 1 8 0
Rupit	... 1 8 0	... 1 4 0	... 1 2 0
Faringati	... 1 2 0	... 0 12 0	... 0 9 0
Waste	... 0 3 0	... 0 3 0	... 0 3 0

The total area surveyed was 1,119,322 acres, of which 264,680, excluding tea lands, were assessed; tea lands made up 19,607 acres, and the remaining 835,035 acres, including reserved forest, were unassessed. This settlement resulted in increasing the revenue of these 11 parganas from Rs. 88,618 to Rs. 1,51,862. This assessment was found to press too heavily on the jotedars, and there was much default in collections. The local officers ascribed the partial break down of the settlement mainly to three causes, viz., insufficient care in the classification of soils, failure to make allowance for injury by wild beasts, and too sudden an increase of demand in the case of some of the jotes. Rupees 5,465 were lost by relinquishments and desertions, and ultimately a further reduction of Rs. 17,806 had to be made by Government.

7. This settlement expired on 31st March 1890; and in 1888 the Government of India had ordered a resurvey and resettlement under the provisions of the Bhutan Duars Act,

XVI of 1869. Mr. E. Walsh, c.s., was appointed Settlement Officer, and joined his post on 13th February 1889. He was compelled by ill health to retire from the settlement on 9th November 1889, and Babu Chunder Kanta Ganguli, Assistant Settlement Officer, remained in charge till 20th January 1890. Mr. D. H. E. Sunder, Deputy Collector, was then appointed Settlement Officer, and conducted the operations till their close. The work was carried on under the supervision of the Commissioner and the Director of Land Records.

8. The demarcation of jotes over the greater part of the area under survey was made by Munshi Panch Cowri Biswas, Assistant Settlement Officer, between November 1888 and March 1890. The survey and preliminary record-writing were carried out by a Party of the Survey of India under the immediate charge of Mr. H. T. Hanby, Extra Assistant Superintendent of Survey, and under the superintendence

of Captain G. B. Hodgson. The survey work and the initial record-writing were finished by the Survey Department by the end of June 1892. The settlement field-maps were drawn to the scale of 16 inches to the mile.

9. Settlement work began in November 1890, in parganas North and South Mainaguri and Chengmari, and an offer of representative jotedars to pay an enhancement of three annas in the rupee for the good taluks and one anna in the rupee for a few specified as bad, was considered to be a suitable basis for fixation of rates.

The amins of the Survey Department had classified the rupit and faringati lands in three classes according to their supposed values, and in October 1890, rates had been sanctioned based upon that classification. But when Mr. Sunder came to examine into these classes, he found it impossible to justify them, and the jotedars refused to accept them as representing any really existing difference in the value of the soil. Sir Charles Elliott, after visiting the tract in April 1891, agreed in these objections and authorized Mr. Sunder to impose the following rates :—

			Rate per acre.
			Rs. A. P.
Basti	...	...	3 0 0
Rupit	...	2 0 0	In exceptionally favoured tracts near a market or road, &c.
		1 12 0	In ordinary first class blocks.
Faringati	...	1 6 0	Ditto second ditto.
		1 6 0	In ordinary first class blocks.
Waste	...	1 2 0	Ditto second ditto.
		0 3 0	

These differential rates were to be imposed on blocks of land, not on individual fields, whole tracts being classed by the Settlement Officer as first or second class according to his knowledge of their situation and advantages.

10. In the remaining nine parganas all rupit and faringati lands have been placed in a single class only, *i.e.*, without subdivision into 1st class, 2nd class, &c., under the major classes. The settlement of these parganas, which are in a comparatively backward state, was made on the basis of the rents paid by the chukanidars, the revenue in every case being two-thirds of the rent. Where the jotedar cultivated himself, rates were fixed so as to correspond with the rental paid for similar lands by chukanidars, deducting the jotedar's allowance. This system was worked out in detail for the different parganas, and rates for jotedars' lands were separately calculated for each. In parganas Lakhipur, East Madari, Chakwaheti, Buxa, Bhatibari, Bhalka, and Ambari Falakata, the rates calculated in this manner were found to be generally the same as those sanctioned at the last settlement. In Moraghat the rate for rupit was raised from Re. 1-8 to Re. 1-12, that for faringati from Re. 1-2 to Re. 1-4, and in West Madari the rupit rate was raised from Re. 1-4 to Re. 1-8. In Moraghat the full rates sanctioned were reduced in the jotes which are subject to ravage by wild animals.

11. The 11,112 jotes shown in the table in Number and distribution of paragraph 3 of this Resolution are distributed as follows :—

		Number.	Area in acres.
Jotes assessed to revenue	...	9,971	384,895.91
Jotes being markets.	Private markets	17	99.14
	Government markets	44	2,020.71
Area left unassess- ed.	Waste land jotes or rather blocks held khas by Government and reserved for fodder and fuel purposes.	817	49,109.08
	Waste land jotes or blocks held khas by Government, but available for settlement.	262	338,047.26
	Revenue-free jote (granted by Government to late Rai Upendra Nath Duardar).	1	36.6
		<hr/> 11,112	<hr/> 774,208.16

12. At the present settlement the revenue, which has been assessed on the 9,971 jotes, will be Rs. 3,74,901, against Assessment. Rs. 2,33,999, the former revenue, showing an increase of Rs. 1,40,902, the details of which are given in the following statement:—

DESCRIPTION OF LAND COME UNDER SETTLEMENT.	Number of jotes assessed to revenue.	CLASS OF SOIL ASSESSED.						REVENUE PAYABLE ACCORDING TO—		INCREASE.
		Basti.	Rupit.	Faringati.	Doba.	Waste.	Total.	Last settlement.	Present settlement.	
1	2	3	4	5	6	7	8	9	10	11
Area of old jotes come under revision of settlement.	6,703	Acres. 8,847	Acres. 113,967	Acres. 77,022	Acres. 1,249	Acres. 94,878	Acres. 295,963	Rs. 2,29,104	Rs. 3,17,890	Rs. 88,786
Area of new jotes assessed to revenue.	2,743	244	6,125	7,595	129	46,603	60,697	.....	46,198	46,198
Area of Jalpesh temple lands resumed and assessed to revenue.	44	64	747	460	3	344	1,619	.....	2,465	2,465
Area of Colonel Hedayet Ali's estate settled at half rates.	389	371	7,982	4,490	38	9,682	22,563	4,895	7,897	3,002
Area of lands held revenue-free by the late Rai Upendro Nath Duardar, now settled with his heirs at one-fourth rates.	92	94	1,007	383	21	2,550	4,054	.....	451	451
Total ...	9,971	9,620	129,828	89,950	1,440	154,057	384,896	2,33,999	3,74,901	1,40,902

The increase of Rs. 88,786 in the revenue of old jotes borne on the Deputy Commissioner's tauzi before 1892-93 is due, the Settlement Officer writes, to (1) extension of cultivation, and (2) to enhancement of rates. Of the 2,743 new jotes, including lands leased under the Arable Waste Land Rules, 1,104 were assessed at 12 annas an acre, 156 at 9 annas an acre, and the remaining 1,483, which were found well under cultivation, at the full rates.

13. The precise degree in which the increase in the present assessment is due to increase of area and to rise in rates respectively, ought to have been brought out with especial care and fullness by the Settlement Officer, and it is in this respect that his Report is chiefly deficient. The following statement is in this respect that his Report is chiefly deficient. The following statement has been prepared from the pargana details given on pages 137-161:—

NAME OF PARGANA.	FORMER SETTLEMENT.						Former assessment.	PRESENT SETTLEMENT.						Present assessment.
	Homestead.	Rupit.	Faringati.	Total cultivated.	Waste.	Total area.		Homestead.	Rupit.	Faringati.	Total cultivated.	Waste.	Total area.

West Madari ...	58	1,183	5,112	4,354	3,243	7,597	78	2,011	1,481	3,553	4,553	13,040	9,370	10,701
Bhalka ...	631	5,363	2,116	8,101	2,966	11,006	7,830	703	6,468	3,316	8,487	2,252	3,844	3,74,901
Ambari Falakata ...	249	4,764	2,280	7,293	1,932	9,225	10,483	254	4,021	2,843	7,118	2,30,839	1,54,057	3,84,896
	7,458	91,108	88,377	1,86,944	1,20,384	3,07,328	2,33,999	9,621	1,31,268	89,950	2,30,839	1,54,057	3,84,896	

The former assessment amounted to Rs. 2,33,999. If the old rates are applied to the new areas, the following result is obtained:—

	Acres.	Rs.	Rs.
Homestead ...	...	9,621 at 2	19,242
Rupit ...	...	131,268 " 1-8	1,96,902
Faringati ...	...	89,950 " 1-2	1,01,193
Waste ...	...	154,057 " 0-3	28,885
			3,46,222

The increase in area, therefore, accounts for a rise of Rs. 1,12,223, or about 48 per cent. The present settlement is actually Rs. 3,74,901, so there remains a balance of Rs. 25,679 or about 12 per cent., which is attributable to the rise in the rates.

14. The total cropped area in the estate is 206,838·42 acres. The following table shows the areas under the principal crops and their percentage:—

NAME OF CROP.	Area under crop.	Percentage.	
		1	2
Rice	164,316·87		79·43
Mustard	18,715·85		9·05
Jute	6,629·33		3·20
Tobacco	7,083·94		3·43
Total	196,736·99		95·11

15. There are 44 Government markets and 17 private (jotedars') markets in the Western Duars; and the latter have been settled at a total annual rent of Rs. 1,246. Since Markets.

March 1888 tolls have been levied, according to a fixed scale, in markets on khas lands; and Rs. 13,753-12-3 were collected in this way during 1893-94. The fees levied in the Government markets have been constituted an excluded local fund. The receipts from tolls and the rents of private markets are expended on the maintenance and improvement of markets. All markets in the Western Duars are under the control of the Deputy Commissioner.

16. Eight hundred and forty-three blocks of land, measuring 50,137·63 acres, in the several tahsils, have been reserved for Fodder and fuel reserve. fodder and fuel purposes. Of these blocks 26, measuring 1,028·55 acres, have been leased out, and the remaining 49,109·08 acres have been left unsettled. Maps showing the situation of these reserves have been prepared for use of the tahsildars, to check encroachments. The Settlement Officer recommends the planting of trees for firewood on a few of the larger blocks in South Mainaguri, although vast jungles exist in the neighbourhood, on the ground that "difficulties are put" by the Forest Department "in the way of people in obtaining timber of any kind." The suggestion and the reason are alike unsound and do not require notice. The unleased area reserved for fodder and fuel purposes is probably in excess of requirements and should not be locked up so as to prevent desirable extension of cultivation.

17. Rules for the grant of leases of arable waste lands in the Western Duars were, as last revised, published in the Arable waste lands. *Calcutta Gazette* of 16th May 1888. All lands

available in the Mainaguri tahsil for settlement under those rules have been taken up, but in the Falakata, Alipur, and Bhalka tahsils 292,692·68 acres are still available. The Settlement Officer recommends that in future the waste lands available in the Western Duars be assessed to revenue at the pargana faringati rate for such period as shall coincide with the termination of the present settlement, instead of being leased under the abovementioned rules. The Commissioner points out that the rules provide privileged rates for the first five years of occupation, and then contemplate the assessment only of lands actually reclaimed. He therefore thinks it doubtful whether, merely to escape the trouble of a second measurement on the expiration of five years, cultivators would be willing to forego these advantages. The Lieutenant-Governor agrees with the Commissioner.

18. The following table shows the number of tenants of different classes in the Western Duars, the land held by them, and the revenue and rent paid by them :—

CLASS OF TENANT.	Number of tenants.	Number of holdings.	Total area held by each class of tenant.	Revenue or rent payable according to present settlement.	Average area per holding.	Average revenue or rent per acre.
1	2	3	4	5	6	7
Jotedars ...	23,339	9,971	201,693·57	Rs. 3,74,901 0 0	Acres. 38·6	Rs. A. P. 0 15 7
Adhias under jotedars.	15,618	15,618	54,913·92	.....	3·5	.. ..
Total ...	38,957	25,589	256,607·49	.....	.....	.....
Chukanidars under the jotedars.	14,016	11,176	93,582·09	1,69,472 12 5	11·4	1 5 1
Adhias under the chukanidars.	6,552	6,552	16,452·43	.....	2·5	.....
Dar-chukanidars ...	3,739	3,739	18,253·90	.....	4·8	.. ..
Total ...	24,307	21,467	128,288·42	.....	.....	.....
GRAND TOTAL ...	63,264	47,056	384,895·91	.....	....	.....

The number of resident jotedars is 21,724, and that of non-resident jotedars, who include many persons living near their jotes, though not on them, is 1,615, or less than 8 per cent. The jotedar's interest in his land sells at a substantial price, varying from three years' purchase on the rental in Alipur tahsil to 13 years' purchase in Mainaguri. With regard to *chukanidars*, it has been laid down that they have a permanent tenure, and are entitled to retain their holdings through the settlement, subject to the condition that the rents paid by them can be enhanced if they do not already pay 50 per cent. above the jotedari rates ; if so enhanced, no further enhancement should be allowed during the currency of the settlement. The *dar-chukanidars* are few. In order to discourage subinfeudation they have not been in any way acknowledged or guarded at this settlement, except as stated in paragraph 5 of the Director's covering letter.

19. According to the census of 1891, the population of the Western Duars was 296,964 souls, the principal castes being Population. Rajbansi or Koch, Muhammadan, Dobasiyas, who were formerly Rajbansis, Mech, Garo, Bhutia, and Toto. The Rajbansis preponderate, forming about 41 per cent. of the whole population of the Western Duars.

20. As required by Rule V of the Schedule of Rules appended to Act XVI of 1869, the records of jotes in all the five tahsils were duly published between March 1893 and February 1894, and under Article XI of that Schedule, the Commissioner has confirmed the settlement of all the tahsils by notifications published by him in the *Calcutta Gazette* between November 1893 and April 1895. The settlement of jotes of the Mainaguri, Falakata, Alipur, and Bhalka tahsils has been made for 15 years, while the settlement of jotes of pargana Ambari Falakata has been fixed for 10 years.

21. The revenue is paid by two kists, namely, the 10-annas kist on 15th February, and the 6-annas kist on 31st October. Revenue kists. The revenue was collected on the new basis in Mainaguri tahsil, with effect from 1st April 1892 and in the remaining tahsils with effect from 1st April 1893.

Miscellaneous revenue. 22. Besides land revenue, revenue is derived from certain other fluctuating sources, of which the principal are:—

	Revenue obtained in 1893-94.
	Rs.
Capitation tax	9,854
Grazing fees	10,919
Fisheries	1,954
Sale of trees	16,829

Capitation tax is paid annually by Meches, Nepalese, and Garos for land cultivated by them at the rate of Rs. 3 or Rs. 4 a year per each adult male. Fees for grazing cattle on Government khas land are charged at the following rates:—

For each buffalo	... 8 annas a year.
" cow	... 4 "
" goat or sheep	... 2 "

The Lieutenant-Governor would like to have a report from the Commissioner, explaining why, as stated in paragraph 696 of the Report, the rates fixed for timber cut from khas lands have been fixed by the Deputy Commissioner at 25 per cent. less than the Forest Department rates.

23. Of 41,754.74 acres of land, including waste, lying in parganas West Madari, Moraghat, and Lakhipur of the Falakata

Lands settled with the heirs of tahsil, leased to the heirs of the late Colonel late Colonel Hedayet Ali. Hedayet Ali in 1883, 19,191.31 acres of waste land

have been resumed for failure to fulfil the conditions as to reclamation laid down in the lease, and the remaining 22,563.43 acres in 359 blocks or jotes have been settled with them at half rates. The present revenue is Rs. 7,897.7.3, against a former sum of Rs. 4,894.12.

24. With regard to the Jotedars' Union Fund, of which an account is given in paragraphs 489 to 493 of Mr. Sunder's Jotedars' Union Fund. report, it appears from Government order No. 465T.—R., dated 5th November 1890, that Sir Steuart Bayley consented to the administration of this fund by Government officers as an exceptional and temporary measure, and subject to the approval of the Government when the Duars' Settlement report was submitted. Mr. Nolan reports that the proceeds of the Fund have been judiciously expended, but that the existence of the Fund is purely voluntary and is not likely to be long continued.

25. The total cost incurred on 504,638.28 acres cadastral survey and settled, and 269,569.88 acres surveyed on the scale of 2 inches to the mile, is as follows:—

	Rs.	Average cost per square mile.		Cost per acre.
		Rs.	A. P.	
Survey ...	3,75,105	310	0 0	0 7 9
Settlement, Rs. 1,68,807	1,68,807			
Deduct receipts (on account of mutation and survey fees, court fees, &c.), Rs. 36,587	36,587	1,32,220	167 12 8	0 4 2
Total	5,07,325			0 11 11

The high rate of the cost of survey was due to the unhealthiness of the climate of the Western Duars, to the necessity for importation of foreign amins, and to the dearness of labour. The cost of settlement was moderate.

26. Mr. Sunder disposed of 8,038 boundary disputes, mutation, and other cases; and of the 873 appeals preferred to the Commissioner against his decisions, 863 were upheld, and only 2 cases were modified and 8 reversed.

27. Rules have been sanctioned in Government order No. 1877, dated 4th April 1895, for the maintenance of the records of Maintenance of records. the present settlement. The three tahsildars of Mainaguri, Falakata, and Alipur, who continue to be in charge of the work of survey and settlement of waste lands for ordinary cultivation, are to be appointed Registrars of Mutations in connection with the maintenance of the settlement records; and Maulvi Wajhuddin Ahmed, Officiating Deputy Collector in charge of the Tea Survey Department, has been appointed Settlement Officer, and given the general charge of supervision over the work of maintaining the records. Inspection, and the penalties contained in the patta, are relied on in order to secure the maintenance of the record. It is in contemplation that the Maintenance of Records Act III (B.C.) of 1895 lately passed in the Bengal Legislative Council should be extended to the Western Duars, when the penalties therein contained will apply, and some modification of the rules lately sanctioned will be necessary. The settlement records are deposited at the three tahsils named above, in which pucka record-rooms have been built for the purpose.

28. The Lieutenant-Governor concurs in the commendation which the Commissioner has bestowed upon Mr. Sunder, that he has conducted this settlement with exceptional industry and ability. His Report has been found open to criticism, but his work as Settlement Officer was much superior to his Report. He laboured with great devotion in the unhealthy climate of the Terai, and carried the consent of the people with him, to an almost unprecedented degree, in effecting a large increase in the Government revenue. The thanks of Government are also due to the former and present Commissioners, Messrs. Lewis and Nolan and the former and present Directors of Land Records, Messrs. Finucane and Macpherson, for their efficient supervision of the work.

ORDER.—Ordered that copies of this Resolution be forwarded for the information of the Director of Land Records and the Commissioner of Rajshahi. —

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

*Secretary to the Government of Bengal.*

## WEATHER AND CROP REPORT.

*For the week ending the 8th July, 1895.*

**Burdwan.**—Rainfall at Sadar 1·84. Weather cloudy. *Aus* doing fairly, but more rain wanted for cultivation of *aman*. Common rice sells from 10 to 21 seers per rupee.

**Midnapore.**—Rainfall at Sadar 3·02. Weather seasonable. Prospects of indigo, sugarcane and *til* (sesamum) good. Transplantation of paddy going on. More rain wanted. Common rice sells from 16 to 21 seers a rupee.

**24-Parganas.**—Rainfall at Sadar 99. Weather seasonable. Prospects of crops good. Transplantation of *aman* commenced. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs.
Sadar	... 11 to 13
Barasat	... 14
Basirhat	... 19
Diamond Harbour	... 14 } per rupee.

**Murshidabad.**—Rainfall 3·89. Weather hot. State of indigo, sugarcane and mulberry seems favourable. The late rain has done much good to *bhadoi* paddy and jute plants. Fodder available. Common rice sells at 15 seers per rupee.

**Khulna.**—Rainfall at Sadar 1·09, Bagerhat 5·38, Satkhira 2·51. Weather cloudy and rainy. Cultivation of land for *aman* in progress. Prospects of standing crops good. More rain wanted in Satkhira. Price of common rice 17 to 22 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 1·96. Weather hot and cloudy. More rain wanted. Price of common rice 14 seers a rupee. Outbreak of cattle-disease reported from Thakurgon. No complaint for fodder or drinking water.

**Rangpur.**—Average rainfall 1·97. Weather hot and cloudy. Want of rain has damaged the *aus* crop and retarded the sowing of *aman*. Fodder available. Rice selling from 11 to 15 seers per rupee. (Heavy rain now falling and prospects improving.)

**Pabna.**—Rainfall 2·20. Weather cloudy and rainy. Good rain has fallen lately. More is wanted. Crops doing well. Common rice selling at 16 seers per rupee at Pabna and 15 seers at Sirajganj. Fodder and water ample.

**Dacca.**—Rainfall 2·12. Weather cool with rain at intervals. Prospects of *aman* and jute good. *Aus* and *til* are being harvested. Price of common rice 19 seers per rupee. No cattle-disease. Fodder plentiful.

**Chittagong.**—Rainfall 4·61. *Aus* doing well. *Aman* being transplanted. Prospects fair. Cattle-disease continues. Water and fodder abundant. Prices steady.

**Patna.**—Rainfall 1·47. *Bhadoi* crops and paddy are being sown. *Marua* is being transplanted. Prospects good. Common rice selling at 17 or 18 seers per rupee.

**Gaya.**—Rainfall at Sadar 2·89. Sufficient rain in the district generally. *Marua* millet is still being transplanted and paddy and maize are being sown. Prices about normal. Fodder and water ample.

**Champaran.**—Rainfall at Sadar 6·23. Prospects of crops good. Common rice sells at 15½ seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Rainfall though not yet sufficient has greatly benefited *bhadoi* sowings. More rain wanted. Fodder and water sufficient. Prices almost stationary.

**Bhagalpur.**—Weather hot and cloudy. Standing crops doing well. Only paddy seedlings suffered for a time. There has been rain throughout the district. Common rice sells at 17 seers 10 chitaks per rupee. Cattle-disease reported from Banka. Fodder and water sufficient.

**Purnea.**—Rainfall 5·35. Prospects of *bhadoi* and jute continue good. Rain has done much good to *aghani* paddy. More rain is wanted in Araria for transplantation of *aghani* seedlings. Fodder and water sufficient. Common rice sells from 14 to 22 seers a rupee.

**Cuttack.**—Rainfall 2·28. Weather seasonable. Crops on low lands are reported to have been somewhat damaged by floods. Prospects of *beali* otherwise good. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 23 seers 10 chitaks per rupee.

**Hazaribagh.**—Weather seasonable. Sowing of paddy and *bhadoi* crops approaching completion. Transplanting of paddy seedlings commenced. All crops doing well. Fodder and water sufficient.

SUPPLEMENT TO THE CALCUTTA GAZETTE, JULY 10, 1895. 1139

**General Summary.**—There was rain in all the reporting districts during the week, but more is wanted in parts. The condition of the standing crops is reported good. The transplanting of the winter rice seedlings has commenced in several districts, and in the Patna Division the sowing of the *bhadoi* crops is in progress. The jute crop is beginning to be cut in the north of the Rajshahi Division, but unless heavy rain falls soon there will not be water enough for steeping. In Cuttack the floods are said to have done some damage on low lands. Cattle-disease is reported from Dinajpur, Chittagong and Bhagalpur. The price of common rice is almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,

*The 9th July, 1895.*

C. E. BUCKLAND,

*Secretary to the Govt. of Bengal.*

STATISTICAL DEPARTMENT,  
The 8th July, 1895.

C. E. BUCKLAND,  
Secy. to the Govt. of Bengal.

**Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of June 1895.**

		Inches.	Date.	Hour.
The mean pressure of the month	...	29.571		
The average pressure of June from 24 years' registers	...	29.549		
The highest pressure in the month	...	29.813	5th	22
The lowest pressure in the month	...	29.273	28th	16
The range of pressure	...	0.540		
The total number of hours of bright sunshine during the month	...	171.7		
The maximum possible number of hours of sunshine	...	403.4		
The mean temperature of the month	...	84.1		
The average temperature of June from 24 years' registers	...	85.0		
The highest temperature in the month	...	95.3	14th	
The lowest temperature in the month	...	72.8	1st	
The range of temperature during the month	...	22.5		
The mean daily range of temperature	...	12.4		
The greatest range of temperature in one day	...	21.9	1st	
		Per cent.		
The mean humidity of the month	...	84		
The average humidity of June from 24 years' registers	...	81		
The mean vapour tension of the month	...	0.974		
The average vapour tension of June from 9 years' registers	...	0.998		
The mean cloud proportion of the month	...	6.38		
The average cloud proportion of June from 18 years' registers	...	7.01		
		Inches.		
The total rainfall of the month	...	11.82		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	...	10.34?		
The average fall of June from 48 years' registers	...	12.08		
The greatest fall in 24 hours	...	1.53	4th	
		Days.		
The number of rainy days in the month	...	22		
The average number of rainy days in June from 24 years' registers	...	19		
The mean maximum equilibrium temperature of solar radiation during the month	...	146.9		
The mean difference of sun and air temperatures	...	56.8		
The greatest sun temperature	...	157.8	8th	
The greatest excess of sun over air temperature	...	66.4	10th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	...	75.6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	...	2.2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	...	3.9	13th	
		Miles.		
The mean movement of the wind per day	...	124.1		
The greatest movement of the wind in one day	...	259.0	28th	
The greatest movement of the wind in one hour	...	19.0	28th, 3 to 4 P.M.	
The number of hours with winds from each of the 8 points—				
N. 20, N.E. 47, E. 200, S.E. 164, S. 146, S.W. 82, W. 10, N.W. 6, Calm 45.				

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .008 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.5 higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

METEOROLOGICAL OFFICE, INDIA;  
Calcutta, the 8th July 1895.

For Meteorological Reporter to the Govt. of India.

## Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 6th of July 1895.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 6TH OF JULY 1895.

THE cyclonic storm which had been the principal feature of the weather in Bengal and the north of the Bay during the week ending on the 29th June had moved towards the north-west, but was influencing conditions in the west of the province.

On the 30th June, the first day of the week under review, pressure was still low in the west of Bihar, and gradients were steep from east to west, especially in the northern districts. During the preceding twenty-four hours there had been a very rapid increase of pressure in Chota Nagpur and a rise of more than a tenth of an inch in Orissa and South-West Bengal, while a moderate fall had prevailed in Bihar. Rainfall was still very general over the whole province except in Orissa and the extreme north of Bihar, but falls were not more than moderate except in East Bengal and at Darjeeling and Kurseong. As the heavy rainfall had been confined to Orissa and Chota Nagpur, temperature was still about  $5^{\circ}$  below the normal in these districts, while in the central districts and Bihar there was a small defect. In Assam and North Bengal, on the other hand, temperature was above the normal. On the 1st of July the rapid rise of pressure in Bihar, and moderate changes elsewhere resulted in an almost normal distribution. With the clearing skies temperature rose very quickly, the change beginning in Orissa and extending northwards over the province, so that by Tuesday, the 2nd, there was excess in means for the day at nearly all stations.

After the recovery of pressure and a return of comparatively settled weather, the pressure distribution underwent but little change during the remaining days of the week. The uniformity, however, was a more distinct feature than usual, and a very shallow depression appeared over the centre of the province. Round this low pressure area winds took irregular cyclonic directions, and instead of blowing from the east in Bihar, as they generally do at this season of the year, the prevailing direction was from the west.

In Lower Bengal conditions became more normal after the changes referred to above. For the past two or three weeks the monsoon current has been diverted towards the west, instead of moving northwards over East Bengal, but on the 1st of July southerly winds prevailed, and from then till the end of the week the south or south-easterly winds in East Bengal showed that the moist winds from the east of the Bay were moving in their customary channel. The effect of this on the rainfall distribution is already apparent, as the average fall for this week in East Bengal is almost normal, whereas in the previous weeks there was a large deficiency. But the difference in North Bengal is not so marked, though there also the rainfall has been more heavy. In the previous week the average fall was about a sixth part, while this week it is more than half the normal.

The low pressure area, which became fairly well marked on the 2nd, was more distinct on the 3rd, and the centre of the wind circulation appeared to be in the east of Bihar or in North Bengal. The distribution, however, was so uniform that the somewhat irregular changes of the 4th gave rise to a number of local areas of low pressures, and these to thunderstorms which caused general but irregular, and in places very heavy rainfall.

As lowest pressure on this day was over Bihar, the depression was moving slowly towards the north. On the 5th changes continued small, but a fall in the central districts and a rise elsewhere caused the shallow depression to become more distinct with a more regular circulation of winds. Heavy rain again fell in places, chiefly in Chota Nagpur and the extreme north of Assam and North Bengal. On the 6th pressure rose everywhere, moderately in the southern districts, and slowly further north, and the depression was being forced up against the hills, where it became diffused on the following day.

*Pressure.*—After the rapid recovery in the western districts during the two first days of the week, changes were unimportant, and readings nearly normal. Means for the week differ but little from their normal values. In Orissa the difference is only a few thousandths of an inch. In the other districts there is defect, varying from .01 inch in South-West Bengal to .04 inch in Assam.

*Temperature.*—While the general rainfall continued in the early part of the week, temperature was below the normal everywhere, especially in Orissa and Chota Nagpur. The recovery was quick after the cloudy weather passed away, and for several days mean temperature was high by between  $2^{\circ}$  and  $3^{\circ}$ . When the disturbed weather became more decided towards the end of the week, comparatively low temperature again prevailed. The means for the larger subdivisions are above the normal in all districts except Chota Nagpur, excess of more than  $1^{\circ}$  occurring only in Assam and East and North Bengal.

*Rainfall.*—Though there has been a good deal of rain during the week, the slight break in the middle has prevented amounts from exceeding the normal except in Chota Nagpur. The distribution on the whole has been more uniform, as East Bengal has received nearly the normal amount and North Bengal more than two inches. The daily falls during the latter part of the week, being due to local thunderstorms, were very irregular in amount, some places receiving very little rain, while at scattered stations there was as much as 3 inches. Defect in North Bengal is 1.96 inches, in Bihar and Orissa 1.2 inches, and in Lower Bengal a third of an inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 6th of July 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.	Average number in week.	Normal average number in week.	Variation.	Since 1st of month.	Normal average.	Variation.	Since 16th May 1895.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	...	...	...	...	...	...	...	...	...	...	...	...	...	...	17.18	

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; t, thunder p, passing temporary showers.

SUPPLEMENT TO THE CALCUTTA GAZETTE, JULY 10, 1895.

\*1157

OFFICE OF SANITARY COMMISSIONER FOR BRNGAI.

*Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892.*

The Council met at the Council Chamber on Saturday, the 6th July, 1895.

### Present:

- The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, presiding.
- The HON'BLE H. J. S. COTTON, C.S.I.
- The HON'BLE D. R. LYALL, C.S.I.
- The HON'BLE J. A. BOURDILLON.
- The HON'BLE C. E. BUCKLAND, C.I.E.
- The HON'BLE H. H. RISLEY, C.I.E.
- The HON'BLE R. C. DUTT, C.I.E.
- The HON'BLE RAI DURGA GATI BANERJEE BAHADUR, C.I.E.
- The HON'BLE SURENDRANATH BANERJEE.
- The HON'BLE J. G. WOMACK.
- The HON'BLE MAHARAJA JAGADINDRA NATH ROY OF NATOR.
- The HON'BLE MAULVI MUHAMMAD YUSUF KHAN BAHADUR.
- The HON'BLE C. E. SMYTH.

### STATEMENT OF THE COURSE OF LEGISLATION.

The Hon'ble THE PRESIDENT said:—"Before beginning the work of the Council, I wish briefly to state that the work of the Session which is now commencing is summed up in the List of Business which lies before Hon'ble Members. We have to introduce and to pass three small Bills, all of which will be brought forward to-day for the first time, and we have to carry through the Sanitary Drainage Bill, which is now in the hands of the Select Committee. I am in hopes that the Select Committee will be able to present their Report upon this Bill on Saturday next, and in that case I propose that we shall commence the discussion of it on this day fortnight, and then proceed to discuss it regularly as long as is necessary, till the Bill is passed. In that way I think it is probable that in the course of two, or at the outside of three, sittings, beginning from this day fortnight, the 20th instant, we shall be able to get through our legislative programme, and I shall then be able to release Hon'ble Members from further attendance in Council. Practically speaking this day fortnight will be the first day on which there will be anything but formal business before the Council, and I hope that by that time the Council will be completely re-organised, and that we shall then have present all the members who have already been elected, and who are now being re-elected, and I hope then to have the opportunity of welcoming them to the Council."

### RAIN GAMBLING.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Has the attention of Government been called to the articles which have appeared in the newspapers, particularly in the *Bharat Mittra*, drawing attention to the nuisance of rain gambling at Barabazar? What action, if any, does the Government intend to take in the matter? Is the Government aware that the gambling is carried on openly in a place which is thronged with people from morning till evening and is not far off from the police-station, and that it is regarded as a serious nuisance by the respectable section of the community at Barabazar? Is the Government aware that rain gambling has been suppressed in the town of Bombay and in all the Native States?

The Hon'ble MR. COTTON replied—

"The Lieutenant-Governor has had the subject referred to under his careful consideration; he is advised that this form of gambling cannot be interfered with except by legislation, and he has decided that it is not desirable to attempt to legislate with the object of stopping it. His reasons are, firstly, that it is practically impossible to put down betting in private houses: if the particular form it has taken in the case under reference were stopped, it would break out in some other form, and if driven into secrecy, it might be even more harmful than if practised openly. Secondly, he does not think it possible to devise a law which would stop the form of betting known as rain gambling without also bringing such practices as betting on races, or on other events of chance, within the same prohibition; he does not think the public conscience would support this; and he is opposed to any legislation, the tendency of which would be to punish acts committed by one class, while similar acts committed by another class are not interfered with."

### ALLEGED DACOITY AT FARIDPUR.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

(a) Has the attention of Government been called to a charge of dacoity brought by one Tarak Chandra Bose in the Faridpur district against Aijuddi and others reported in the newspapers in April last? Is it true that the Deputy Magistrate who in the first instance enquired into the case remarked that there was scarcely a shadow of doubt that some of the accused entered the boat of the complainant and took its contents, and that in submitting the case for the orders of the Magistrate, recommended that the accused should be summoned—

two under section 411, Indian Penal Code, and one under section 380, Indian Penal Code? Is it the case that the Magistrate, who never examined a single witness, but relied solely on the papers in the case, not only did not summon the accused, as recommended by the investigating officer, but directed that the complainant be prosecuted under section 211, Indian Penal Code, for bringing a false charge against the accused; that thereupon the complainant moved the High Court, who reversed the order of the District Magistrate, directing him to make a further enquiry and send up the accused to the Sessions, if there was a *prima facie* case; the High Court expressing their surprise that the Magistrate should direct the prosecution of the petitioner under section 211, Indian Penal Code, simply because there was not sufficient evidence in support of his complaint; that eventually the accused in the case were committed to the Sessions by the Deputy Magistrate, but that the Magistrate directed the Public Prosecutor to withdraw the case and the case was accordingly withdrawn, notwithstanding that the complainant himself undertook by a special application to conduct the prosecution at his own expense and on his responsibility?

Having regard to the law which leaves no remedy open to the complainant, will the Government direct the Public Prosecutor under section 417, Criminal Procedure Code, to present an appeal to the High Court against the order passed by the Sessions Judge, or pass any other orders which the justice of the case may demand?

(b) Is it true as stated in the petition of Tarak Chunder Bose in the case referred to in the preceding question, that the Inspector-General of Police found fault with the police in the Faridpur district for their want of success in dealing with dacoity cases, and that several cases of dacoity reported by the police to be false have resulted in the conviction of the persons accused, which convictions were upheld by the High Court?

The Hon'ble MR. COTTON replied.—

"The attention of Government was called to the case in question, and a report was called for from the Magistrate through the Commissioner, which has lately been received. It appears that the facts are on the whole as stated in the Hon'ble Member's question. The complaint was rejected by the police as false; but on the plaintiff filing a petition, a preliminary enquiry was ordered, which was conducted by a Deputy Magistrate, who reported that though the charge of dacoity was false, the plaintiff had been robbed. The Magistrate read this report and held that the evidence recorded did not bear out the conclusion, and that the whole story was incredible, and he ordered the plaintiff to be prosecuted under section 211 for a false complaint. The High Court on appeal reversed this order, and directed that the Deputy Magistrate who held the enquiry should go on with it, and determine judicially whether process should issue against the persons accused, or else consider whether it is a fit case in which to direct a prosecution for false complaint. On receipt of these orders, as the first Deputy Magistrate had only second class powers, the case was made over for trial to another and full-powered Deputy Magistrate, who eventually held the charge to be proved, and committed the accused to the Sessions. The Magistrate on again reading the evidence was convinced that the charge could not be sustained, and consulted the Sessions Judge, who, after perusing the records, told the Magistrate that he saw nothing in it to justify conviction, and that it would be a waste of time to try the case. On this the Magistrate instructed the Government Pleader to ask leave to withdraw from the prosecution under section 494, Criminal Procedure Code, and the Sessions Judge passed the following order:—

"I have perused the voluminous depositions taken before both Deputy Magistrates, and consider that no conviction for dacoity is likely to be had on such evidence as that. Certainly that this Aijuddi now accused cannot be convicted. I accordingly allow the withdrawal. Aijuddi is acquitted, &c."

"Under these circumstances it would be out of place for the Government to file an appeal against the acquittal.

"It may be convenient that I should add here that the further assertion which has been made in some newspapers, and which was repeated in a question

lately put in Parliament, that the accused were eventually convicted and the conviction upheld by the High Court, is without foundation.

"With regard to the last part of the Hon'ble Member's question, the petition of Tarak Chunder Bose, to which he refers, has not been seen by Government, but I have made enquiries from the office of the Inspector-General of Police, and have ascertained that the District Superintendent of Police of Faridpur was warned to show greater personal activity in the investigation of dacoity cases, but that it is not the fact that any cases of dacoity during 1894 and 1895 reported by the Faridpur police to be false have resulted in the conviction of the accused in the Sessions Court."

#### ALLEGED MURDER AT CHITTAGONG.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Whether the attention of Government has been called to the facts of a case recently published in the *Amrita Bazar Patrika* of the 14th June last, in which one Kanti Chandra Ghose was charged with murder by the District Superintendent of Police at Chittagong? Is it true, as stated in the *Patrika*, that Kanti Chandra Ghose was arrested on a charge of murdering his servant upon an anonymous application in which his name was not even mentioned, but that one Kanti Chandra Roy was charged by the writer of the anonymous petition with the said murder, and as there was no Kanti Chandra Roy in Chittagong, Kanti Chandra Ghose was arrested, that he was kept in *hajat* for nearly a month, notwithstanding the fact that respectable witnesses, such as a local Munsif and others, deposed that the accused Kanti Chandra Ghose had one servant, and that he was living, and that subsequently the man who was supposed to be murdered was found living in the Backergunge district? Does the Government approve of the proceedings? If not, will the Government pass such orders as the justice of the case may demand?

The Hon'ble MR. COTTON replied :—

"The attention of Government was drawn to the articles in the newspaper referred to, and a report on the facts of the case has been called for from the Commissioner of Chittagong. The report has been received to-day; as soon as it has been considered by the Government, an answer will be given to the Hon'ble Member's question."

#### THE BHUTAN DUARS REPEALING BILL.

The Hon'ble MR. BUCKLAND moved for leave to introduce a Bill to provide for the repeal of Act XVI of 1869 (the Bhutan Duars Act). He said :—

This is an Act of special interest only to the Bhutan Duars, and it is not likely that the Council can have much acquaintance with it. I should therefore, perhaps, say a few words with regard to the circumstances under which this Act became law, before asking the Council to repeal it. It will not be necessary to go over the history of the campaign against Bhutan, which took place in 1864-65 in consequence of the treatment that Sir Ashley Eden's mission met with at the hands of the Bhutias. It is sufficient to mention that during the year 1865 the British arms were crowned with victory, and that a treaty of peace was made on the 11th of November of that year with the Bhutan Government, and that, following the threats which had been conveyed to the Bhutan Government of the consequences of their non-performance of the conditions offered to them, it was considered necessary by the Government of the day, by a proclamation, dated the 4th July 1866, to annex to British territory the eighteen *duars*, which are now known by the collective name of the Western Duars: *duars* meaning the gates or passes from British territory into what was then the territory of the Government of Bhutan.

"I have consulted the records of those days, and find it there stated that the Bhutias had left no records, and that they appear to have had nothing which might be called a system of Revenue Administration. When the country was taken over by the British Government, and the district of Jalpaiguri was formed, the Government of the day introduced certain laws and regulations

into the territory thus acquired. Amongst them it appears that the Code of Civil Procedure was extended to that territory, and thereupon the cognizance of all suits of a civil nature became vested in the ordinary civil courts having jurisdiction within the annexed tract of country. Within a very short time a case occurred in which the local civil officer did justice between landlord and tenant. But the case came on appeal to the High Court, and the High Court in their decision intimated that they were satisfied that justice had been done by the local officer, but that in conformity with law they were bound to overrule him. When this matter came before the Government of India, it was thought desirable to legislate with a view to have substantial justice done in the newly acquired territory, rather than strict law administered, and administered unwillingly, as I have stated, by the High Court of the day. A Bill, therefore, which became Act XVI of 1869, was introduced in the Council of the Governor-General in May 1869, by Mr. Frank Cockerell of the Bengal Civil Service; and it might be well that I should read a few lines of the speech the Hon'ble Member made in introducing the Bill, which will, I think, show the Council in a nutshell the objects and reasons of that measure. The Hon'ble Member said:—

'Experience had shown that, in a newly acquired territory, where British Administration had been preceded generally by bad Government, and often, as in the case of Bhutan, by a complete absence of any regularly constituted Government, claims relating to interests in land, or in any way connected therewith, were not satisfactorily dealt with by the ordinary Civil Courts, governed and restricted as those Courts were by the rules of Civil Procedure in their adjudication of all suits and matters coming before them.'

'For claims of this kind, whether with regard to the equitable interests of the persons concerned, or the interest of the State which, until the land revenue assessment of the newly-acquired territory was completed, might be said to be interwoven with those of claimants of any right or title in the land, needed to be determined by considerations of expediency and good policy, such as the Civil Courts in the exercise of their ordinary jurisdiction were precluded from entertaining. Hence, in the case of such previous acquisitions of territory as the Panjab and Oudh, the operation of the Code of Civil Procedure was barred as regards claims to any interest in land pending the completion of the land revenue settlement of those provinces, and all claims of the nature referred to were adjudicated in the Court of the Settlement Officer.'

'Why this course was not adopted as regards the territory ceded by Bhutan at the time of its annexation, did not appear, but a case had recently occurred which showed conclusively that this measure ought to have been taken when the Code of Civil Procedure was introduced into the annexed province, and should certainly be no longer postponed.'

"Then the Hon'ble Member in charge of the Bill which became Act XVI of 1869 referred to the High Court judgment to which I have briefly alluded. The Bill was then referred to a Select Committee, and the rules which were sent up by the Bengal Government were considered. The rules which were attached to the Act (and which have since performed that function) were meant to provide for cases regarding immoveable property in that territory.

"When the Bill was passed in July, 1869, in the Viceroy's Council, the Hon'ble Member in charge of it dwelt chiefly on the point that the Bill was a temporary measure only intended to provide for a transitional state of things, and the question then was how the Bill should be terminated. The question at issue at that time was whether the Act should be terminated by a published order of the Governor General in Council, or whether it should be left to future legislation to repeal it, and it was decided at that time to take the latter course. It is, therefore, necessary to introduce a Bill to repeal the Act which, as was settled at the time, cannot be repealed or altered merely by an order of the Government.

"Since the passing of Act XVI of 1869 the Jalpaiguri district, which includes the Western, *i.e.*, the Bhutans Duars, has become one of importance in consequence of a considerable increase in the population. The census of 1872 showed a population of 100,111, but the census of 1891 showed just a few less than 300,000 inhabitants. Moreover, the district has grown enormously in importance by reason of the vast amount of British capital which has been introduced into it, a number of tea-gardens have sprung up, and there has been a great extension of European industry and enterprise in that territory. It has therefore appeared to the Government for some time past that the Act, which was introduced avowedly for a temporary purpose in dealing with the newly

acquired territory of the eighteen Bhutan Duars, is not adapted to the present state of affairs. It must not be supposed that there is no law in force in the Western Duars portion of the Jalpaiguri district. In 1874 an Act was passed, called the Scheduled Districts Act, by which the Local Government is empowered, with the sanction of the Governor General in Council, to extend to the territories mentioned in that Act, or to any part of them, any Acts which are in force in British India. I have been through the Bengal Code, and I find that at this moment there are in force in the Duars more than thirty different Acts, and among them several very important Acts, such as the Penal Code, the Code of Criminal Procedure, the Code of Civil Procedure to a limited extent, the Police Act, the Transfer of Property Act, and the Contract Act, and it is quite possible, under the Scheduled Districts Act, to which I have referred, to extend to the Duars, with the sanction of the Governor General, any Act which the Government may please. But it is not possible to extend to it the whole of the Code of Civil Procedure as long as Act XVI of 1869 remains on the Statute Book.

"These are the reasons why it is thought necessary to introduce this little Bill. Before anything can be done to empower the ordinary Civil Courts of the country to take up cases connected with immoveable property, it is necessary to repeal Act XVI of 1869. The question has assumed some importance within the last few years, not only on account of the development of English industry, but also because the tea planters have been memorialising the Government for some time with a view to the conversion of this district into what they call a Regulation district. It is obviously impossible to grant that application *in toto*; the district will remain under the Scheduled Districts Act, and it will be a question as to which Acts should be applied in regard to cases concerning immoveable property when Act XVI of 1869 is repealed. This matter will, perhaps, be discussed in Select Committee, but I should inform the Council that the decision lies entirely with the Local Government, who can, with the sanction of the Government of India, introduce such laws as they may think fit when Act XVI of 1869 has been repealed and the ground has been thereby cleared.

"It may be asked why this repeal was not carried out before. Looking at the Statement of Objects and Reasons, I am reminded that for some years past very important settlement operations have been carried out in this tract of country, and it was thought desirable, as long as the settlement was in progress, to defer the repeal of this Act. A Deputy Magistrate and Collector, Mr. Donald Sunder, has as Settlement Officer recently completed this settlement, and has done it very well, and his final report is now before the Government. The Lieutenant-Governor took the opportunity, when the settlement proceedings were drawing to a conclusion, to lay the matter before the Government of India, and their sanction has been obtained to proceed with legislation to repeal Act XVI of 1869. With these observations I move for leave to introduce this Bill."

The Motion was put and agreed to.

The Hon'ble MR. BUCKLAND also applied to the President to suspend the Rules of Business to enable him to introduce the Bill, and to move that it be read in Council.

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble MR. BUCKLAND introduced the Bill and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. BUCKLAND also moved that the Bill be referred to a Select Committee, consisting of the Hon'ble Messrs. Lyall, Beighton and Smyth, and the Mover.

The Motion was put and agreed to.

## THE CALCUTTA ELECTRIC LIGHTING BILL.

The Hon'ble Mr. COTTON moved for leave to introduce a Bill to facilitate and regulate the supply of electricity for lighting and other purposes in Calcutta. He said :—

"As it is proposed to advance this Bill more than one stage to-day, it will be more convenient, with Your Honour's permission, that I should make such remarks as I propose to address to the Council when I move that the Bill be read in Council.

The Motion was put and agreed to.

The Hon'ble Mr. COTTON said :—"The observations which I shall address to the Council with reference to the Bill which has been circulated, will relate, first, to the necessity for legislation on the subject of the supply of electricity; and in the second place to an explanation of the particulars in which the Bill which will be introduced to-day differs from the English Statute Law on the subject. Hon'ble Members are no doubt aware that it is open to any of Her Majesty's subjects to generate and supply electricity for his own purposes—either to use it himself, or to supply it to other places and persons—provided that no injury to the property, convenience, or comfort of any other persons, or to the public, be thereby committed, and provided also that it be not necessary for that purpose to break up the public streets or interfere with any public rights. As far as the supply of electricity is limited to this, no Act of the legislature is necessary. So we have seen that in the town of Calcutta various private installations have been established. There is the installation for the electric lighting of Harrison Road, which is managed by the municipality; electric light is supplied by private installation to the Hooghly Bridge, to the Docks at Kidderpore, to the Bengal United Service Club in Chowringhee, to the Eden Gardens under the control of the Public Works Department, and we have seen temporary installations in the *maidan* for illuminating the skating rink, and in Government House, both on the occasion of the recent investiture and on previous occasions. These are to all intents and purposes private installations which have been carried out without trespassing on public rights, and no legislation has been required to validate them, and if the demand for electricity in the town of Calcutta were limited to isolated cases of this kind, no legislation from the Government would be required.

"The reason for legislation is this: The Government are of opinion, and the authorities whom we have consulted on the subject, viz., the Chamber of Commerce, the Trades' Association, the Calcutta Corporation, and the Commissioners for the Port of Calcutta; these authorities as well as the Government are of opinion that the time has come when the demand for electricity will increase, and that it cannot be adequately supplied, except by the establishment of one or more generating stations which would be in a position to meet the demand. As soon as a scientific agency has acquired commercial value and becomes a means of profit, there arises a class of potential consumers who want to be supplied, and a class of traders who desire to supply such consumers. Hence the public pressure which has been put on the Government to facilitate the introduction of electric lighting; but as consumers cannot be accommodated without producers interfering with public and local rights, and in particular without their breaking up the streets to the great inconvenience of the public, it becomes necessary for Government, through its Legislative Council, to regulate the supply. This is done by providing that those who undertake to supply electricity, and cannot do so without overriding public and local rights, shall be enabled to do so by legislation passed for the purpose, subject in the interests of the public to legislative restrictions.

"This briefly is the reason of the necessity for legislation in Calcutta, and it is identical with the reason for legislation in Great Britain and in other countries where electricity is now supplied by companies. The history of the English law on the subject is simple. In 1879, an important committee of the House of Commons was convened, under the presidency of Sir Lyon Playfair, to consider whether legislation was necessary to regulate the supply of electricity. It was the opinion of that Committee that the time had not come

for legislation, and although it was foreseen that the time would come quickly, the proposal to legislate was then allowed to drop. The ink with which that report was written was hardly dry before very important discoveries in electricity were made, and in particular the discovery of incandescent light, which enabled electric lighting to be distributed more easily; and as soon as that discovery was made, pressure was again put upon Parliament to legislate for the regulation of the supply of electricity, and then the law of 1882 was passed. That law was substantially still in force, and is the statutory provision upon which the Bill before the Council is based. By that law authority is conferred for the Regulation of the supply of electricity in three ways: first, by a special Act; secondly, by what is known as a provisional order; and thirdly, by license. The meaning of a special Act is of course clear. A special Act is passed in order to enable a particular company to supply electricity subject to such restrictions as that Act may contain. This is a procedure which the Board of Trade have discouraged, and as a matter of fact very few special Acts of this character have been passed. The second procedure, which is described as the grant of a provisional order, is somewhat similar to that of a special Act. Power is delegated to the Board of Trade to prescribe the whole of the procedure under which the undertaking company is authorized to supply electricity, and the details regarding the restrictions to be imposed upon them. A provisional order is an elaborate set of rules which guide and control the company. It has no effect whatever until it is confirmed by a special Act of Parliament. A special private Act is introduced confirming the order of the Board of Trade, and then the order of the Board of Trade has the force of law. The third method is that of a license, which contains details similar to those of a provisional order, but differs from it in some material respects. The Board of Trade, in whose hands the entire administration of this department rests, have always discouraged licenses and have encouraged promoters to apply for provisional orders, and very few licenses have therefore been granted under the Act. Nearly all the companies in England have been enabled to undertake their work by means of provisional orders. I will explain briefly the salient distinctions between a license and a provisional order. A provisional order is without limit of time. A company is granted its rights indefinitely, but there is a clause in the Act of 1882 which empowers the local authority over the area to which the order extends to purchase the undertaking on the expiration of twenty-one years. This period having been objected to by the public, an Act was passed six years afterwards, in 1888, extending the period from twenty-one years to forty-two years, and all provisional orders issued in England now are subject to the right of the local authority, that is to say, the Corporation or County Council, or London County Council, to purchase the undertaking at the expiration of forty-two years. A license is granted for a fixed period of seven years subject to renewal. The advantage of a license over a provisional order consists in the fact that it is not liable to be bought up by the local authority, and also in the fact that a license can be obtained quickly and promptly without the delay of going to Parliament to confirm it, or the risk which every reference to Parliament involves. No further objection is raised. The Board of Trade have the power in their own hands.

"The question came before this Government as to the procedure which should be adopted in India, and it was decided that the form of a provisional order is unsuited to the condition of things prevailing here. There is no Board of Trade under the Government to whom the responsibility of drafting the provisional order can be referred. In Calcutta the Government itself has to exercise the authority which in England is exercised by the Board of Trade. So it was determined that the form of a license would be more appropriate to the condition of things here.

"Then the question of the term of the license came under consideration, and also whether a concession granted under a license should be purchaseable by the local authority or not. In respect of the latter question it was decided that the local authority should have no right to purchase at any time, thereby acting on the same lines as have been adopted in England in regard to licenses. In Calcutta the Municipal Corporation will have no power to purchase any concession granted under this Act.

"The question of the duration of a license involved a further difficulty. It was originally proposed that the duration of a license should be seven years,

the same period as the English Act prescribed. I should have said that the Act of 1882, as it was originally introduced into Parliament, prescribed the period of three years; it was extended to five years by the Select Committee of the House of Commons, and the House of Lords raised it to seven years. The legislation of 1888 did not affect the duration of licenses. This point was, however, taken up both by the Chamber of Commerce and the Trades' Association; and both those authorities have pointed out that seven years was too short a period. And looking to the fact that the license contemplated by this Government is in many respects similar to a provisional order, except that the Government takes the place of the Board of Trade throughout, and also to the obvious consideration that capital will not lend itself to an undertaking unless the permanence of that undertaking is guaranteed, or at all events unless it is guaranteed for a very considerable period, the Government have modified the term from seven years to twenty-one years, as the Council would find in the Bill before them. A license is proposed to last for a period of twenty-one years subject to renewal. It is thought that a period of twenty-one years is sufficiently long to attract capital in India, and as long as it is prudent to grant as the term of any license, especially when it is remembered that the action taken under this Act is necessarily of a somewhat experimental character.

"Turning to the provisions of the Act, I desire to invite the attention of the Council to a few points. You will observe that the short title of the Act is the 'Calcutta Electric Lighting Act.' But in point of fact this Act follows the phraseology, as far as possible, of the English Law. Its object is not to supply electric lighting, but, as you will see from the preamble, it is a Bill to facilitate and regulate the supply of electricity for lighting and other purposes. It is not intended to limit the provisions of the Act to electric lighting in any way. There are other purposes to which I hope electricity will be devoted, and to which companies formed under the provisions of this Act will, I trust, devote their energies. I merely throw out as a suggestion the substitution of electric tramways for the tramways which we see in Calcutta drawn by horses. That would be an immense improvement when the tropical heat of Calcutta is considered. It would be a great benefit both to the public and the wretched horses employed, if electricity could be substituted for the present means of haulage. Throughout the Act you will find that it contemplates the supply of electricity, and not electric lighting only. That in fact is one of the main principles of the Bill, and it follows in this respect the English Act.

"Section 3 of the Bill empowers the Local Government, which, as I have already said, takes the place of the Board of Trade, to grant licenses, and following the precedent of the English Law, it insists on the consent of the local authority being first obtained. Now in England when a license is granted, the consent of the local authority is absolutely a condition precedent. Unless that consent is obtained, a license cannot be given. In the case of a provisional order the Board of Trade are vested with powers to interfere, and, if they see sufficient reason, to overrule any objection which may be made by a local authority. It has been deemed fit to introduce a similar provision in this Bill. The Council will see that there is a *proviso* that if the Local Government, after due enquiry, are satisfied that the local authority has no sufficient reason for withholding its consent, the Local Government may overrule the local authority and grant a license.

"In the amending law, the English Act of 1888, there is a very important clause amending the first Act, which enacts that the grant of authority to an undertaker to supply electricity in any area shall not in any way prevent the granting of a license or provisional order to any other person or authority within the same area; that is to say, this clause legislates against monopolies; it declares that no company shall be granted a monopoly. That clause of the section is not introduced in the present Bill, and it will be for the consideration of the Select Committee whether a similar provision should be introduced by law. But I may point out that although there is no monopoly created by law in England, the Board of Trade have declared again and again—it is one of the rules which guide its procedure—that to all intents and purposes the grant of a provisional order under a public Act is equivalent to a monopoly. They have not as a rule allowed two companies to run within the same local area.

"This Bill, following the English Act, contemplates the grant of licenses for particular areas. As you all know, in London the metropolis is as it were mapped out. Wherever there is a demand for electric lighting the local area is defined, and the provisional order relates to that particular area and no other. In the same way it is contemplated that Calcutta may be mapped out; or it may be possible that one single area may suffice for the whole of Calcutta. These are matters which will have to be considered by the Government before a license is granted. In England the generating stations are sometimes of very vast size, and the largest of all the Electric Companies has, I understand, its generating station in Deptford, seven miles at least from the locality supplied with electricity. This implies that the capital of the company is very large. That is not likely to be the case in this country, but the fact shows that electricity can be supplied for lighting and other purposes from a very considerable distance, and it may be unnecessary to divide Calcutta into different areas, if a company is formed with sufficient resources to afford the supply of electricity which may be required.

"Section 4 of the Bill relates to the making of rules, and section 5 to the conditions to be inserted in the license. The rules are intended to regulate the procedure to be followed in applying for a license. In section 4, by some oversight of the drafter, clause (a) has found a place by mistake. It provides for the making of rules for securing the public from personal injury. That is a clause which finds its place in the conditions of the license, and ought to be inserted in section 5 alone. That provision is based on the English law, and has reference to the conditions to be mentioned in the license. I need hardly say that the conditions to be mentioned in the license are an important factor with which the public is concerned. The Act itself is a mere skeleton; the flesh and blood will be found in the license to be ultimately granted. The form of a license is identical with the form of a provisional order. There are many such orders granted, and intending undertakers will experience no difficulty in finding what a license is likely to contain. The Board of Trade have prescribed what they call a model provisional order which, subject to such modifications as the conditions of time and place may render necessary, will doubtless be the model upon which licenses will be granted under this section. It is suggested by the Trades' Association that the law should contain a provision for the limitation of the price to be charged for the supply of the electricity. That is a point which will be fully dealt with in the license. The schedule to the model provisional order states the maximum price to be charged. I have seen some provisional orders in which the prices are somewhat different from those contained in the model order, but, whatever the maximum price may be, that is a detail which need not be contained in the Act, but will find a place in the provisional order or license. In the same way the Engineer to the Calcutta Corporation has suggested that provision should be made for the preparation of maps; now, maps are no doubt very necessary, but the law does not provide for them, it is a detail which is left to the framers of the license.

"The sections of the Act which follow, sections 6 to 11, are very important; they relate to the right the undertakers or company who supply electricity have to break up streets and adopt all other measures which are necessary for laying down their works. These provisions are taken with slight modifications from the Indian Gas Works Act of 1857, modified slightly with reference to the English Gas Works Acts of 1845 and 1871. The English Electric Lighting Act merely declares that the procedure under the Gas Works Act for these purposes shall be held to apply.

"Section 13 touches on a very burning question, namely, the right of the undertakers to erect aboveground works, *i.e.*, whether the electric line should go above the road or below it. This is a matter which has been under consideration in England on many occasions. The English Act requires the express consent of the local authority before overhead wires can be erected. It was thought, however, that such sanction would not afford a sufficient guarantee in this country, and in place of the consent of the 'local authority,' the Bill contains the words 'express consent of the Local Government.' There is no doubt that overhead wires are a source of danger. The wire by which an electric current is maintained for the supply of electricity is of different material, and much thicker and heavier than the electric wire used by telephone companies.

It constitutes by itself a source of danger to the public on account of its weight, and in the interests of the companies themselves it has been felt in England that overhead wires are a source of danger, and that mischievous people are apt to cut them, whether it is done to spite a neighbour, or from pure mischief and thus injure the supply. On the other hand, there is some difficulty in the town of Calcutta in regard to underground wires. It is said that the soil, for some reason or other, renders it extremely difficult to lay down underground wires, and to maintain them in proper condition and order, and that is one of the reasons, as I understand, why the Harrison Road installation has temporarily broken down. At all events there is much to be said on both sides, and it is thought advisable to reserve to the Government the power of sanctioning the erection of overhead wires.

"Section 16 of the Bill is of some importance. I invite attention to this section as giving effect to the principle which I explained to you is one of the main principles of the Act, namely, that the Act is not limited to the regulation of the supply of electricity for electric lighting, but to facilitate and regulate the supply of electricity to whatever use it may be put. It lays down that the undertakers are not to prescribe any special form of lamp or burner to be used by any consumer, or in any way to control or interfere with the manner in which electricity supplied by them under this Act is used; that is to say, the consumer, as he is called under the Bill, may utilise the electricity supplied to him in any way he thinks proper. He can use it as a motive power all the day if he can; he can use it as an illuminating agent all night, if he thinks fit to do so. A second proviso has been added in accordance with the suggestion of the Trades' Association, namely, that no lamps or electric fittings shall be added or reduced without due notice being given to the undertakers to enable them to inspect the wires and make such alterations as may be necessary. This clause is not contained in the English Act, and personally I do not think it is a desirable clause. Whether it should be retained or not is a matter which will receive the consideration of the Select Committee; but as it stands I am not sure that it is consistent with the principle laid down that consumers shall do as they please with the supply of electricity given to them. That supply can always be regulated by a meter, with which every house which is supplied with electricity must be furnished.

"Section 24 of the Bill contains a provision to which I invite attention. The concluding part of clause 2 of that section relates to the protection of telegraph lines. The English Law enacts that any difference between a telegraph authority and the undertakers or their agents in regard to telegraph lines shall be determined by arbitration. In place of Arbitrators, the Local Government has been inserted in this Bill. This was a matter which was discussed between the Government of Bengal and the Government of India, and the Government of India declared, in terms which will doubtless commend themselves to Members of this Council, that it would weaken the safeguards of the Imperial telegraph system if questions affecting the safety of that system were left to be determined by arbitration.

"These are the main points contained in the Bill itself to which I deem it necessary to invite the attention of the Council. The Council will understand that where I have not specially referred to them, the provisions of the Bill follow the lines of the English Act modified as may be necessary to suit the conditions of this country. There is one point, however, not taken up in the Bill, but to which the amending law of 1888 refers. Section 4 of the amending Act of 1888 is aimed at a class of persons who may be described as non-undertakers, that is to say, persons who generate electricity, but who do not apply for a license under the law, and who work on their own account. The passing of this Bill, as I have already explained, will not, in the smallest degree, interfere with the operations of private individuals on their own account, or on account of other people, provided that the rights and convenience of other people are not affected. But there are persons who, relying upon the indifference or ignorance of the public, will not hesitate to lay down lines and works in direct communication with a local authority or individuals concerned without having obtained any license, and who are prepared to run the risk which their trespass on public rights may involve. It is to control such operations that section 4 of the amending Act lays down that the Board of Trade or Postmaster General may

by notice require any persons so using or supplying any electric lines or works to conform to any regulations in the interest of public safety, which may be prescribed, and that in default thereof the removal of such lines or works may be ordered, and heavy penalties imposed. It will be for the consideration of the Select Committee whether a similar clause should not be introduced into this Bill. I am disposed to think that possibly it will be desirable to do so. In England there have been conspicuous cases, as, for instance, the famous Company known as the Sir Coutts Lindsay Company, who started their works as a sort of free lance. They never applied for a provisional order or license, or anything of the sort, but distributed electricity freely, and adjusted all disputes by compromise with the people who were injuriously affected by their works; they promptly compromised not only with local authorities, but also with all individuals who objected to their overhead wires, or to any other proceedings which they adopted. At last the Sir Coutts Lindsay Company, foreseeing difficulties, went into liquidation, and re-opened under the name of the very largest Company which exists, namely, the London Electric Supply Company. But the origin of that Company was irregular, and it gave rise to the clause in the amending Act of 1888 to which I have referred. Other companies followed their example and carried on trade in several places, in Brighton and elsewhere, but they did not succeed; and it is a matter for consideration whether we should not bring similar undertakings, if they should be attempted in India, under regulation and control.

"These are the observations I have deemed it necessary to make in introducing this Bill. I am afraid I have been somewhat tedious, and have addressed you longer than, perhaps, some of you had expected; but I feel that this is a very important measure, and that the meaning of it is, perhaps, not very clearly apprehended, it may be by Hon'ble Members, and certainly not by the public generally: and it is perhaps, therefore, not inconvenient that I should have explained in this Council at some length the objects of the Bill and the character of its provisions. It is very necessary that this Bill should be carefully examined in Select Committee, and I have no doubt this will be done. We cannot but feel that this is the first attempt which has been made in India to meet such a very technical and difficult matter as the regulation of the supply of electricity, and that our present Bill may become the model for legislation in other Presidencies. If such is the case, I can only trust that it will be found a safe model for other legislatures to follow.

"With these remarks, I have the honour to apply to you, Sir, to suspend the Rules of Business to enable me to introduce the Bill, and to move that it be read in Council.

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble MR. COTTON introduced the Bill and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. COTTON also moved that the Bill be referred to a Select Committee consisting of the Hon'ble the ADVOCATE-GENERAL, the Hon'ble Messrs. SMYTH and WOMACK, the Hon'ble Babu SURENDRANATH BANERJEE, and the Mover.

The Motion was put and agreed to.

#### THE BENGAL SANITARY DRAINAGE BILL.

The Hon'ble MR. LYALL moved that the Hon'ble Messrs. BOURDILLON and BEIGHTON, and the Hon'ble MAULVI MUHAMMAD YUSUF KHAN BAHDUR, be added to the Select Committee on the Bengal Sanitary Drainage Bill.

The Motion was put and agreed to.

## THE CALCUTTA PORT ACT, 1890, AMENDMENT BILL.

The Hon'ble MR. RISLEY moved for leave to introduce a Bill to further amend the Calcutta Port Act, 1890.

The Motion was put and agreed to.

The Hon'ble Mr. RISLEY also applied to the PRESIDENT to suspend the Rules of Business to enable him to introduce the Bill and to move that it be read in Council. He said :—

" On the last occasion when the Calcutta Port Act came under amendment, at the meeting of this Council on the 13th of April last, I explained that the amendment which I have now to introduce formed part of the original proposal to amend the Port Act. It was, however, introduced at a comparatively late stage, after the proposal as a whole had been referred to the Government of India for the consideration of the Secretary of State, and this particular amendment was held to be of a sufficiently important character to render it necessary to make a further reference to the Government of India and the Secretary of State. That is the reason why this amendment was not introduced with the group of proposals which the Council then had before them.

" I will now explain as briefly as possible the reasons which render this particular amendment of the Port Act necessary. The Port Commissioners possess a large amount of land adjoining their foreshore. This land is vested in them; they have let out portions in plots to various persons, and on such portions and plots shops, huts, and so forth have been built. Up to the time when the Calcutta Port Act of 1890 was passed, and probably for some time afterwards—as far as I can make out from the papers—these huts and shops, together with the portions of land on which they stand, were assessed for the purpose of municipal taxation under what are called the bustee provisions of the Calcutta Municipal Act. That is to say, the Port Commissioners were treated in the same way as the owners of bustee lands in other parts of Calcutta. They were called upon to supply the information necessary to enable the valuation to be made. The entire amount of the assessment was, in the first instance, collected from them, subject to a deduction of one-eighth to cover the cost of collection, and they were enabled afterwards to collect from the owners of the huts and shops, and so forth the entire amount of municipal assessment on these buildings, and half the amount of municipal assessment on the land on which they stood.

" With the passing of the Calcutta Port Act of 1890, all this came to an end. Section 59 of that Act provides a special procedure for valuing the Port Commissioners' property for the purposes of municipal assessment. Their entire property, the docks, machinery, land, and so forth, is valued with reference to the expenditure which has been incurred upon it, and five per cent. on the aggregate expenditure is taken to be the annual value of the property, and on that annual valuation the municipal rates are assessed at the rates authorized by the Calcutta Municipal Act. The practical result of this, with reference to these huts, is that from the passing of the Port Act they could neither be valued for the purposes of municipal taxation, nor could any tax be assessed upon them.

" There are two possible modes of procedure by which these huts can be dealt with for purposes of municipal taxation. One is the procedure laid down in the Municipal Act for dealing with bustee property; the other the procedure authorised in the case of ordinary properties. The bustee procedure could not be applied, because it contemplates assessment and collection through the owners of the land. The owners of the land in this case are the Port Commissioners, and they having already been assessed on their lands it was held by learned Counsel to whom this question was referred that they could not be assessed again. The other possible procedure—and this experiment was actually tried by the Corporation after they tried the bustee procedure and failed—was to deal with these huts and shops under sections 101 and 102 of the Calcutta Municipal Act as ordinary buildings. Here they were met by another difficulty which proved equally insurmountable. Section 122 of the Municipal Act provides

two methods of assessment for ordinary buildings. One of these methods is by taking the annual value to be the gross annual rent at which the house may be let or may be reasonably expected to let. But it is stated that the houses in question are not let, and are not built for letting purposes; consequently the procedure on the basis of the annual rental is not applicable. There is also a procedure, the second mode of valuation, which takes a percentage of the present cost of construction as the annual value, and enables the municipal tax to be assessed on that valuation. But it was held by Counsel that this procedure also, which was the only resource left to the Corporation of Calcutta, was inapplicable. The matter being important, and the opinion somewhat technical, I will read to the Council the relevant portion. MR. WOODROFFE says:—

"It is, however, suggested that inasmuch as the Commissioners of Calcutta are empowered under section 101 of Act II (B.C.) of 1888 to impose rates upon all houses and lands within the town of Calcutta, and under section 122 for the purposes of assessment under that Act to fix the annual value of any house not built for letting purposes and not ordinarily let at 5 per cent. on the sum obtained by adding the estimated present cost of building such house, less a reasonable amount to be deducted on account of depreciation to the estimated value of the land with the houses as part of the same premises, they can, for the purposes of the assessment of these houses or huts built by the owners thereof on land of the Port Commissioners, which has already been assessed, fix their annual value by reference to the cost of their materials without inclusion of the value of the land wherein they are built, and which having been already assessed cannot be reassessed. This, in my opinion, the Commissioners of Calcutta cannot do."

"Section 122 does not authorise any such mode of valuation". The learned Counsel does not state in detail the reasons which led him to arrive at that conclusion, but on looking at the section it seems probable that the difficulty comes in from the peculiar wording of the latter portion, which renders it impossible to separate the cost of building a house from the cost of the land. If you could deal with these factors separately, there would be no difficulty in doing what the Corporation proposed. But as Counsel has held that it is impossible to do that, the necessity arises for changing the law.

"The result of this failure to proceed under any law at present in force is that the Corporation stand to lose, and have actually lost, I understand, in the past two years or so, a matter of Rs. 20,000 or Rs. 25,000 a year. The Bill proposes to get rid of this complication by inserting two sections, not in the Calcutta Municipal Act, but in the Calcutta Port Act, empowering the Municipal Commissioners to deal with buildings which stand on the lands of the Port Commissioners, quite irrespective of the value of the land. Five per cent. on the cost of building will be taken as the annual valuation, and the Municipal tax will be assessed on that valuation. For the recovery of the Municipal tax these sections provide that they are to have such remedies, powers, rights and authorities as they possess under the Municipal Act. I understand that these sections were drafted by the legal advisers of the Corporation, and its terms seem sufficient for the purpose. The question of this legislation was referred, before these sections were imported into the despatch sent to the Government of India, to the Port Commissioners who said they had no objection, provided another section was added, which provides for their recovering half the consolidated rate paid upon the land. Under the Port Act, as I have already explained, the Corporation claim a consolidated rate on the amount expended in the first instance by the Port Commissioners on their land, and the effect of this section will be merely to put the Port Commissioners in the same position as all other owners in Calcutta who recover half the Municipal taxation from their tenants.

"That disposes of the two sections, proposed to be inserted by section 3 of the Bill, which constitute the main object of legislation at the present time. It is proposed, however, to take advantage of the opportunity of amending the Act to make a formal, but what appears to be a decidedly necessary amendment in sections 35, 105, and 126 of the Port Act, in which where the word "Tramway" is used, the word "Railway" should be substituted. When the Act of 1890 was passed it appears to have escaped the notice of the framers of the Act, and also the notice of those who had to deal with the amendment of the Act in April last, that ever since the 4th of June 1880 the Port Commissioners' tramway has, in fact, been a railway. On that date by a notification under section 4 of the Indian Railway Act of 1879, which corresponds with section 16

of the Railway Act now in force, that Act was extended to the railway belonging to the Commissioners for making Improvements in the Port of Calcutta. This was done at the request of the Port Commissioners themselves, who applied to the Government in the middle of 1879, and requested that their tramway might be brought under the operation of the Railway Act then in force (Act IV of 1879). They proposed, it is true, that it should be done by a notification under section 54 of the Act, but the Government of India seem to have been of opinion that that section was not applicable. It is section 54 of their Act, which provides that steam tramways might be held to be railways. The Government of India held that the Port Commissioners' Railway was not and never could be described as a tramway, and they made the notification under the section empowering the Port Commissioners to use locomotive power on their 'railway,' and ever since that time, the so called tramway has been a railway. So the proposed change in the Act consists simply of the substitution of the word 'Railway' for 'Tramway,' the object being to bring the Port Act into accord with the Railway Act and to remove any doubts which may exist as to the legal status of the Port Commissioners as regards the carriage of goods and business transaction with other railways."

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble MR. RISLEY introduced the Bill and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. RISLEY also moved that the Bill be referred to a Select Committee consisting of the Hon'ble the ADVOCATE-GENERAL, the Hon'ble MESSRS. SMYTH and WOMACK, the Hon'ble RAI DURGA GATI BANERJEE BAHADUR, the Hon'ble BABU SURENDRANATH BANERJEE and the Mover.

The Motion was put and agreed to.

The Council adjourned to Saturday, the 13th instant.

Legislative Department.

## RESOLUTION ON THE REPORT OF THE LEGAL AFFAIRS OF THE GOVERNMENT OF BENGAL FOR THE YEAR 1894-95.

No. 3858J.

## RESOLUTION.

JUDICIAL

*Calcutta, the 15th July 1895.*

## READ—

The Report on the Legal Affairs of the Government of Bengal for the year 1894-95.

## Read also—

The Reports of the two previous years and the orders of Government thereon.

IN view of a representation made by the Legal Remembrancer in his report for last year, the date fixed for the receipt of this report by Government was changed from the 1st May to the 15th May. This report was therefore due on the 15th May, but it was not received in this office till the 24th June. The Legal Remembrancer again adverts to the difficulty of submitting it in time, and the disadvantage at which he is placed by a hurriedly-prepared and insufficiently-considered report. The Lieutenant-Governor recognizes the force of these representations, and the question will be further considered by Government.

2. The appeal, which was referred to in the report for last year as pending before the Privy Council, has remained undecided. During the year under report one fresh appeal, in which the Syedpur Trust Estate is the respondent, has been filed before the Privy Council.

3. The subjoined table compares the results of Government litigation in all the Civil Courts of Bengal during 1894-95 with those of the two preceding years:—

	ORIGINAL CASES.			APPEALS—				APPEALS—				TOTAL.			
				Before Lower Courts.				Before High Court.							
	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.
1	2	3	4	5	6	7	8	9	10	11	12	13			
Decided in favour of Government.	336	209	110	44	47	45	11	27	18	391	283	173			
Decided against Government... Compromised, remanded, or withdrawn.	116	63	36	12	7	12	6	11	2	134	81	50			
Percentage in favour of Government.	108	46	13	8	18	8	4	6	4	120	70	25			
	74·4	76·8	75·3	78·5	87·03	78·9	64·7	71·05	90·	74·5	77·7	77·5			

Excluding cases under the Land Acquisition Act, the figures are as under:—

	ORIGINAL CASES.			APPEALS—				APPEALS—				TOTAL.			
				Before Lower Courts.				Before High Court.							
	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.	1892-93.	1893-94.	1894-95.
1	2	3	4	5	6	7	8	9	10	11	12	13			
Decided in favour of Government.	145	104	86	44	47	45	11	27	17	200	178	148			
Decided against Government... Compromised, remanded, or withdrawn.	52	40	36	12	7	12	6	9	1	72	56	49			
Percentage in favour of Government.	8	21	12	8	18	7	4	5	4	20	44	23			
	73·6	72·2	70·4	78·5	87·03	78·9	64·7	75	94·4	73·5	76·06	75·1			

The remarkable decrease in Government litigation during the year is ascribed to the unusually small number of land acquisition cases. This no

doubt is the principal cause, but the figures show that excluding such cases there has been a satisfactory decrease in the number of original cases during the past three years.

4. Only two cases were decided adversely to Government in the High Court. In the lower appellate courts twelve cases were decided against Government, but only five of these were conducted after reference to the Legal Remembrancer. That officer remarks that "this complete disregard of the clear and distinct rules for the conduct of civil suits and appeals fully accounts for the unfavourable results." Sir Charles Elliott takes this opportunity of directing attention to the standing orders on this subject, and warns Collectors that if, in transgression of the rules, they take upon themselves the responsibility of filing Government appeals without consulting the Legal Remembrancer, they render themselves liable to be held personally responsible for any loss which may be incurred by the Government. Out of 36 cases decided against Government in courts of first instance, four were not reported to the office of the Legal Remembrancer. But it is not satisfactory, to find that 32 cases, which were so reported, should have been lost. Mr. Beighton assigns two causes for this result. He writes: "Instead of ascertaining and committing to writing precisely what the witnesses to be examined on behalf of Government are prepared to say, too much reliance is placed on the reports of local officers, who, without examining the witnesses themselves, content themselves with a vague assurance that certain facts will be established in evidence," and he adds that it is a matter of common occurrence for the papers to reach his office so late that he has often to decide important questions, on which his opinion and advice are sought, on imperfect materials and without the proper time for deliberation that the nature of the case demands. The Lieutenant-Governor has read these remarks with regret, as disclosing what he must look upon as serious neglect on the part of Collectors whose duty it is to safeguard the interests of Government by every precaution in their power.

5. The following statement shows the results of Court of Wards' litigation during the last three years in all Courts:—

	1892-93.	1893-94.	1894-95.
1	2	3	4
Decided in favour of Court of Wards	...	654	1,322
Decided against ditto	...	73	133
Compromised, remanded or withdrawn	...	66	55
Percentage in favour of Court of Wards	...	89.9	90.8
			87.8

There has again been a considerable increase in litigation, chiefly in the courts of first instance, for which no reason is given. Of 25 cases decided in the High Court, 11, or almost half, were decreed against Government. Nine of these cases were instituted by the Tikari estate in Gaya for the recovery of certain charges which were held to be *abwabs*, and hence illegal. In the lower Appellate Courts, 35 cases were decided against the Court of Wards, mostly suits for the recovery of rent and dák and other cesses, for establishment of occupancy rights, and for setting aside sales held under the certificate procedure. Of 169 cases decided adversely in courts of first instance, the Court of Wards was plaintiff in 59 cases and defendant in 110. The most important of the cases decided against Wards' estates during the year was a suit brought by Rani Parbati Kumari against the minor proprietor of the Jambuni estate in Midnapore for possession of the whole of the estate, claiming it under the Dayabhaga law. The Court of Wards, on behalf of the minor, urged that the family has all along been under the Mitakshara law, but the Subordinate Judge decreed the suit in favour of the plaintiff. An appeal against this decision is about to be preferred to the High Court.

6. The following figures show the extent to which decretal amounts due to Government have been realised in 1894-95 and the two previous years :—

	1892-93.	1893-94.	1894-95.
1	2	3	4
1. Amount under realisation ...	Rs. 42,017	Rs. 47,190	Rs. 34,726
2. " realised during the year ...	12,616	8,943	6,034
3. Percentage of recovery ...	29.5	18.9	17.3

The net balance outstanding at the close of the year was Rs. 27,164. Since 1891-92, when the percentage of recovery was 45.25, there has been a very marked falling off in the realisations effected. The Legal Remembrancer has recently submitted a proposal to Government for appointing a special officer for the purpose of realising the arrears, and he has dwelt at some length in this report upon the necessity of adopting fresh measures. These proposals, which can not conveniently be dealt with in an annual report, have received the separate consideration of Government. The districts

Rs.  
Sonthal Parganas 14,845  
Faridpur ... 4,741  
Hooghly ... 2,373  
Saran ... 2,137

noted in the margin show the heaviest outstanding balances. No progress appears to have been made since last year in the Sonthal Parganas, and the Lieutenant-Governor trusts that energetic measures will be taken by the Deputy Commissioner to show better results.

7. The subjoined table shows the amount of Wards' decrees realised during the corresponding periods :—

	1892-93.	1893-94.	1894-95.
1	2	3	4
1. Amount under realisation ...	Rs. 9,83,675	Rs. 10,80,794	Rs. 8,83,083
2. Amount realised during the year ...	1,59,690	2,00,671	1,51,139
3. Percentage of recovery ...	16.25	18.56	17.11

In the Burdwan Raj Estate, out of a balance of Rs. 2,32,222, only Rs. 68,670 were realised; while in the Tikari Raj Estate, out of a balance of Rs. 3,18,870, only Rs. 48,758 were realised during the year. A list of 11 other estates has been given in which the realisations have been exceptionally unsatisfactory. Sir Charles Elliott fails to see in these figures any evidence of an endeavour to improve on the unsatisfactory results of previous years, which have been so repeatedly adverted to by Government, and is unable to believe that due attention has been devoted to this important branch of the administration of Wards' Estates. The notice of the Board of Revenue will again be invited to the subject.

ORDER—Ordered that a copy of this Resolution be forwarded to the Superintendent and Remembrancer of Legal Affairs and to the Solicitor to Government, for information.

Ordered also that a copy of the Resolution be forwarded to the Revenue Department of this Government and to the Board of Revenue for information.

Ordered also, that a copy of the Report and of the Resolution be submitted to the Government of India, in the Home Department, for information.

Ordered also that a copy of the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,  
*Chief Secretary to the Govt. of Bengal.*

**REPORT ON THE WORKING OF THE WARE-HOUSES IN CALCUTTA  
FOR THE YEAR 1894-95.**

THE following report is published for general information.

H. H. RISLEY,  
*Secy. to the Govt. of Bengal.*

No. 197-J., dated Calcutta, the 8th July 1895.

From—J. G. RITCHIE, Esq., Chairman of the Corporation of Calcutta,  
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit the following report, under section 41 of Act I of 1893 (B.C.), of the warehouses in Calcutta for the year ended 31st March 1895.

2. The Commissioners at their Ordinary Monthly Meeting held on the 7th June 1894, fixed the fees leviable under section 10, Act I of 1893 (B.C.), for 1894-95, at the rate of 10 per cent. on the annual valuation of warehouses, and the fees commenced to be levied at that rate from the 29th of June 1894.

3. The license fees for 10 jute warehouses that had remained unpaid for 1893-94, were realised in the year under report.

4. The following statement shows the number of applications for license received and their result:—

APPLICATIONS.		Total.	Nature of application.	Number sanctioned.	Number refused.	Number pending.
Pending since last year.	Received during the year.					
1	2	3	4	5	6	7
12	108	120	Hay, wood, &c.	111	2	7
1	17	18		10	3	5
Total ...	13	125	.....	121	5	12

5. During the year under review 11 licenses were issued for 1893-94 and 278 for 1894-95, and the following statement shews the aggregate amount of receipts up to the end of the year:—

	Rs.
License fees for 1893-94	... 990
Ditto for 1894-95	... 24,962
Mutation fee	... 135
Amount of fines	... 396
	<hr/>
Total	... 26,483

6. The year under review being the first of the operation of Act I of 1893, all warehouses liable under the Act could not be licensed within the year, and about 350 warehouses yet remained to be licensed when the year came to a close. Most of these warehouses, however, have since been licensed.

7. The following statement shews the receipts and disbursements of the Warehouse Fund during the year 1894-95:—

RECEIPTS.	Amount.	Total.	EXPENDITURE.	Amount.	Total.
1	2	3	4	5	6
To license fees for jute warehouses	Rs. A. P.	Rs. A. P.	By contribution paid to Commissioner of Police for jute license fees for 1893-94	Rs. A. P.	Rs. A. P.
Ditto for 1st quarter, 1893-94	25,927 0 0	25 0 0	... 19,854 3 7		
Miscellaneous receipts	531 0 0		Ditto ditto for 1894-95 (exclusive of Rs. 23,750 paid from General Fund) ...	10,948 0 0	
Balance at the commencement of the year—		26,483 0 0	Balance at the close of the year—		30,802 3 7
Cash in the Bank of Bengal...	19,936 0 5		Cash in the Bank of Bengal...	6,364 8 0	
Less due to General Fund	101 12 10		Ditto with Treasurer ...	55 8 0	
Total ...	....	46,317 3 7	Due from General Fund ...	6,420 0 0	
				95 0 0	
					6,515 0 0
			Total ...	....	46,317 3 7

8. Appended is a complete list of warehouses in Calcutta licensed during the year 1894-95.

PRATAPA CHANDRA GHOSH,

The 13th May 1895.

Registrar of Companies.

## WEATHER AND CROP REPORT.

*For the week ending the 15th July, 1895.*

**Burdwan.**—Rainfall at Burdwan 3·19. Weather hot. Rain urgently wanted. Condition of cattle good. Fodder and water sufficient. Common rice sells from 10 to 20 seers per rupee.

**Midnapore.**—Rainfall at Sadar 84. Weather hot. More rain wanted. Agricultural operations progressing. Prospects of indigo, *til* and sugarcane good. Rice sells from 16 to 24 seers a rupee.

**24-Parganas.**—Rainfall at Sadar 04. Weather seasonable. Prospects of crops fair. Transplantation of *aman* retarded for want of rain. Condition of cattle good. Fodder and water sufficient. Rice sells at—

			Rs. c.
Sadar	...	...	... 11 to 13 0
Barasat	...	...	15 0
Basirhat	...	...	18 13 } per rupee.
Diamond Harbour	...	...	15 0

**Murshidabad.**—State of mulberry and sugarcane favourable. Indigo backward. *Bhadoi* paddy and jute plants are promising. Transplantation of *aman* going on. Rain much wanted. Fodder sufficient. Common rice sells at 15½ seers per rupee.

**Khulna.**—Rainfall at Khulna 29, Bagerhat 1·11, Satkhira 87. Weather hot. Cultivation of land for *aman* in progress. Prospects of crops good. Price of common rice 16 to 22 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 8·84. Weather hot and rainy. Price of common rice 14 to 15 seers a rupee. Outbreak of cattle-disease reported from Thakurgaon. No complaint for fodder or drinking water.

**Rangpur.**—Average rainfall 11·05. Continuous rain throughout the week. Transplantation of *aman* rice in progress. Damage caused by floods in the east of the district. Fodder sufficient. Price of rice 11 to 15 seers per rupee. Prospects hopeful.

**Pabna.**—Rainfall 99. Weather hot and cloudy. Prospects of crops good. More rain wanted. Common rice selling at 17 seers per rupee at Sadar and 14 seers at Sirajganj. Fodder and water sufficient.

**Dacca.**—Rainfall 63. Weather cloudy and showery. Prospects of *aman* and jute good, but more rain wanted. *Aus* and *til* are being harvested. Common rice sells at 19 seers per rupee. No cattle-disease. Fodder plentiful.

**Chittagong.**—Rainfall 1·43. Weather hot. Cultivation of *aman* retarded for want of rain. Prices steady. Water and fodder sufficient. Cattle-disease continues.

**Patna.**—Rainfall 1·95 at Sadar; deficient at Barh and Bihar. *Bhadoi* crops and paddy are being sown. Transplantation of *marua* nearly completed. More rain needed for transplantation of paddy. Fodder and water for cattle sufficient. Common rice selling from 17 to 18 seers per rupee.

**Gaya.**—Rainfall at Sadar 2·45, Nawada 63, Jahanabad 1·04, Aurangabad 1·50. Want of rain felt in Nawada. *Marua* millet still being transplanted. Paddy and maize being sown. Price of common rice 15 seers per rupee at Sadar and 16 seers at sub-division. Fodder and water-supply ample.

**Champaran.**—Rainfall at Motihari 11·99. Sowing of *aghani* crop going on. Common rice sells at 14½ seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Rainfall 5·26. Transplantation of paddy in progress, but more rain still wanted. Fodder and water sufficient. Common rice selling from 16 to 18 seers per rupee.

**Bhagalpur.**—Rainfall 4·05. Weather hot and rainy. Abundant rain last week. Prospects of crops favourable. Cattle-pox reported from one village in Madhipura; disease abated in Banka. Price of common rice 17 seers 10 chitaks per rupee. Fodder and water sufficient.

**Purnea.**—Rainfall 5·84. Heavy rain throughout the district. Transplantation of *aghani* going on briskly. Prospects of *bhadoi* and jute good. No cattle-disease. Fodder and water sufficient. Common rice selling from 15 to 22 seers a rupee.

**Cuttack.**—Rainfall 3·68. Weather seasonable, but more rain is beginning to be required in parts. Weeding of *beali* going on. Paddy seedlings destroyed in places by floods. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 24 seers per rupee.

**Hazaribagh.**—Rainfall at Sadar 1·08. Sufficient rain all over the district. Weather seasonable: sunshine and clouds alternating. Sowing of *bhadoi* crops still in progress. Transplanting of paddy and *marua* commenced in places. Prospects good. Fodder and water ample. Common rice selling from 13 to 16 seers per rupee.

**General Summary.**—The week was characterized generally by fine weather and an absence of rain; but in North Bengal and in Champaran the rainfall was abundant, and in other districts of Bihar and in Bhagalpur and Purnea there were fairly heavy showers. In Rangpur the very heavy downpour is reported to have caused floods in places. *Aus* rice and jute are generally reported good, but the cultivation of winter rice is retarded in many districts for want of rain. In the Patna Division the sowing of the *bhadoi* crops and paddy is in progress, and the *marua* is being transplanted. Cattle-disease is still reported from Dinajpur, Chittagong and Bhagalpur. The price of common rice continues almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
*The 16th July, 1895.*

C. E. BUCKLAND,  
*Secretary to the Govt. of Bengal.*

All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the new Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	
The barometer readings are corrected approximately to those of the standard Newman's No. 88, formerly at the Surveyor-General's Office.	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	
The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	
The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	
The mouth of the rain-gauge is one foot above the ground.	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...	...     ...

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS  
TAKEN IN ASSAM, FOR THE MONTH OF JUNE 1895.**

. THE chief peculiarities in the weather which obtained during June are:—

1. The high pressure which prevailed over the province, and the consequent uniform distribution over the area, including the Bay as well as the land.

2. The easterly winds which were due to the pressure distribution, and the westerly deflection of the moist current from the Bay towards the Orissa coast.

3. As this was much more marked during the present year than is usually the case, weather has been less cloudy in Assam, North Bengal, and also in East Bengal, and temperature has been higher, as compared with the normal, than in the western districts.

4. The influence of the pressure distribution is, however, much more marked in the rainfall distribution, as the average fall in East and North Bengal is less than half the normal, while in Orissa it is more than double, and very little short of 20 inches. The difference in the other districts is small, but there is excess in Chota Nagpur and part of South-West Bengal and defect in Bihar.

5. The first storm of the monsoon season became fairly well defined on the 17th, and soon afterwards crossed the Orissa coast. The second depression of any importance was towards the end of the month, and it also developed in the north-west angle, but crossed the coast between Saugor Island and Balasore.

During the intervening days a shallow low pressure area remained in the south-western districts or the north-west angle of the Bay, altering its position irregularly with the small pressure changes which then obtained. At one time it was over South-West Bengal, at another in the angle of the Bay, and again in Orissa. Though it had little influence in causing disturbed weather, the light cyclonic circulation gave rise to heavy rain in the parts affected. It ultimately appeared to develop into the storm at the end of the month.

During the first half of the month there were few changes of importance. Pressure continued high, and fine weather generally obtained. Local changes resulted in thunderstorms which caused occasional heavy rainfall, but throughout this part of the month, the average fall was below the normal over the whole province, more so in the second than the first week, and especially in the north and east. An important difference is shown in the changes which took place during these two weeks. As a rule, at this season of the year any change in weather is first felt in the eastern districts, and from there spreads westwards over the province. This arrangement obtained in the first week, as far as rainfall and temperature were affected. But during the second, though pressure remained very high at all stations, the slow downward change which then set in, somewhat more rapidly in Assam and North Bengal, was followed by westerly winds and a series of thunderstorms which began in the west and extended towards the north-east. A fall of temperature followed the rainfall, beginning in the south-west and advancing towards the north-east, and by the 11th there was defect in mean temperature over the whole province except in North Bengal and part of Assam, where there was still excess of two or three degrees.

As pressure continued to give way over Bengal and Assam, readings became relatively low in the east, and westerly winds set in, at first in Assam, and afterwards over the whole of the province of Bengal. On the 12th, directions were south-west or west in East Bengal and Assam, and on the 13th the only easterly winds were reported from the west of Bihar. When this westerly current became general, temperature rose steadily, and fine calm weather prevailed for two or three days, but a second series of thunderstorms moved across the province from the south-west on the 14th and 15th, being on the latter date confined chiefly to Bihar and North Bengal.

The steady fall of pressure which had continued with little interruption during the second week almost entirely removed the large excess which had previously obtained, and at the same time a depression began to form in the east of the Bay. Strong westerly winds were blowing across the south of the Bay towards the low pressure area, which moved slowly towards the north-west and became well defined not far from the Orissa coast about the 17th. The wind system over Bengal again became easterly as the depression moved northwards, and this easterly circulation was an important feature of the weather during the latter half of the month, as to its steady existence the irregular distribution of the rainfall appears to be due.

The depression became better defined on the 17th, and the cyclonic circulation more regular. On the 18th its centre was not far from the Orissa coast, and though the downward changes of pressure were only slow in the west of the Bay, the depression had concentrated in consequence of a rise which had prevailed both to the north-west and south-east of it. This rise was rapid in the south of Burmah and brisk in the west of Bihar. On the morning of the 19th the centre of the depression was still to the east of Orissa, but about noon it crossed the coast between False Point and Puri, moving in a westerly direction. The fall of pressure had remained slow in the north-west angle of the Bay. On the other hand, the rise was again rapid in Burmah, and gradients were much steeper over the Bay. Strong winds developed and followed the depression into the north-west angle, while the steeper gradients over the province were attended by strong easterly winds at all stations. General rain fell on the 19th, the heaviest being in Orissa near the centre of the disturbance.

After the centre crossed the coast the depression soon filled up, and the squally weather moderated very quickly—a change which was probably due to the recovery of pressure which had followed the disappearance of another depression on the west coast of India. This rise extended eastward over the whole of India.

The monsoon weather which the depression produced over Bengal continued for some days, and was sustained in the south-west of the province by another but very shallow depression

which appeared over the north of the Bay and South-West Bengal on the 21st. On that day there was a rapid rise of pressure in Orissa and Chota Nagpur, and a brisk fall over Assam and North Bengal. Probably it was owing to the irregularity of these changes that this low pressure area formed, but it was attended by a cyclonic circulation of light winds and by heavy rainfall in South-West Bengal and the east of Chota Nagpur. Meanwhile in North Bengal rainfall had to a large extent ceased, and though still general in East Bengal, it was light. In North Bihar also, owing to the northerly winds due to the pressure distribution, rainfall was becoming scattered. On the 22nd, the low pressure area was in the north of South-West Bengal. On the 23rd a rapid but local fall of pressure over Orissa transferred it to that area and the adjacent part of the sea. On the 24th it was not far from Chaibassa, but it had become very diffused. On the 25th there was a slow rise of pressure in Orissa and Chota Nagpur, and a slow fall elsewhere—changes which, though unimportant in themselves, appear to have led to the beginning of the cyclonic storm which controlled the weather during the last few days of the month. The immediate result of the changes was a diffused depression again over the north-west angle of the Bay. Winds were again cyclonic there and easterly inland, but the depression was so slight that defect was only .05 inch in Bengal, Arakan and Orissa, while further south readings were nearly normal. During these days unusually fine weather prevailed over a great part of the province. The skies were lightly clouded, rainfall scattered, and temperature about  $2^{\circ}$  above the normal.

On the 26th a fairly rapid fall of pressure prevailed in the east of the Bay and led to defect of between .1 inch and .15 inch over the part of the Bay between Orissa and Arakan. The depression became more distinct, with its centre in the north-west angle, and cyclonic winds prevailed over a considerable area, of moderate strength in the south of the Bay, but very light on its northern side. During the next two days it slowly changed its position, but steadily developed, and weather became squally over the greater part of the Bay. Wind remained south-westerly at Diamond Island, and increased daily in strength, the highest velocity being 20 miles an hour on the 27th and 28th. As the area of lowest pressure moved slowly to the north-westward, very heavy rain fell in Orissa. On the morning of the 27th, Puri reported nearly 8 inches and Cuttack 3 inches. On the 28th pressure fell rapidly at Saugor Island and Balasore, and the centre of the depression passed the coast line between these two stations some time during the day. The lowest readings of the barometer were under 29.2 inches, and the greatest defect was about a third of an inch. On the 29th the centre was near Chaibassa, moving rather rapidly towards the north-west. On the 30th it had entered the North-West Provinces, and pressure was rising very rapidly in Chota Nagpur and South-West Bengal and changing slightly in Bihar.

While the depression was deepening in the north of the Bay, gradients became gradually steeper over Bengal. On the 26th the difference between the lowest and highest readings at Saugor Island and Jalpaiguri, respectively, was only .08 inch. On the 27th it had increased to .14 inch, on the 28th to .27 inch, and on the 29th the difference between Chaibassa and Dhubri was about .35 inch. This steady steepening of the gradient from north-east to south-west led to strong winds over the whole province. Rainfall was light in all districts except Orissa, Chota Nagpur, and the adjacent part of South-West Bengal.

After the centre of the disturbance crossed the coast, strong southerly winds blew on the coast of Orissa and at Saugor Island. The squally weather, however, which followed the area of lowest pressure continued in the north-west angle for but a short timee, as the pressure distribution recovered more rapidly than usual.

Pressure in the early part of the month remained high over the whole province, and as excess diminished towards the south of the Bay, where it was very slight, the distribution was unusually uniform. From the 9th to the 17th readings steadily diminished, and the difference from the normal was then small in Bengal, but was over .15 inch in the east of the Bay, where the first depression was developing. After that the downward changes were slow even near the centre of the disturbance, and the recovery was complete on the 21st. From the 22nd to the 27th changes were never large, but they were more irregular than usual, and generally with a downward tendency. As the second depression developed, readings became very low in South-West Bengal and Orissa, and on the morning of the 28th, shortly before the centre crossed the coast, there was defect of .3 inch at Saugor Island and Balasore. On the 29th it was still falling in Chota Nagpur, but on the 30th the recovery was very quick, the rise being a quarter of an inch in Chaibassa. Mean pressure for the whole month is above the normal at all stations, by about .01 inch in Orissa, and by slowly increasing amounts towards the north, where it is .05 inch.

Temperature has been below the normal in the south-western districts and generally high in the east and north. In the early part of the month there was a fall in North Bengal and Assam, when thunderstorms occurred in these parts, but during the latter half there was an almost steady excess of one or two degrees. In the south-western districts defect was as much as  $5^{\circ}$  when the depressions were crossing these parts, and generally throughout the month there has been a small defect. The means for the month are below the normal in Orissa, Chota Nagpur, and South-West Bengal by about  $1^{\circ}$ , and above in the other districts, by  $0^{\circ}.7$  in East Bengal and Bihar, by  $1^{\circ}$  in North Bengal, and  $1^{\circ}.7$  in Assam.

**Rainfall.**—As stated above, the rainfall distribution has been very different from that usual during June. In Orissa the falls reported from the various stations vary from 15 inches to 26 inches, and the average is 18.58 inches. These amounts are all greatly in excess, the differences from the normal varying from 8.6 inches at Jagatsingpur to 17.84 inches at Kendrapara. East and North Bengal, on the other hand, have received less than half the usual fall. The average fall in North Bengal is 7.53 inches as compared with a normal fall of 17.57 inches, and in East Bengal 8.49 inches as compared with 18.16 inches—in each case about 10 inches in defect. Chota Nagpur is the only other district, except Orissa,

which has received more than the normal amount, but the excess is less than 1 inch, while in South-West Bengal defect is nearly 2 inches, and in Bihar more than 2 inches.

Buxa has received 26·4 inches less than the usual amount, Jalpaiguri, Kuch Bihar, Matabahanga, and Cox's Bazar about 20 inches less, and the following places more than 15 inches less:—Fenny, Netrakona, Kurigaon, Mickliganj, and Dinhattta. In the other districts defect generally varies from one to five inches.

The following table gives the actual falls in the various divisions, expressed as percentages of the corresponding normals for the first six months of the year. In the last column the total fall for the same period is so expressed, and it will be seen that there is a large defect in all districts except Orissa and Chota Nagpur:—

METEOROLOGICAL DIVISIONS.	January.	February.	March.	April.	May.	June.	Actual rainfall of first six months of 1895 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	44	9	29	111	86	82	78
North Bengal ...	27	5	49	129	91	43	63
East Bengal ...	11	1	38	140	133	47	75
Bihar ...	71	88	34	129	70	72	73
Orissa ...	49	101	29	194	46	212	149
Chota Nagpur ...	66	52	71	418	70	109	104

The following table gives data for the comparison of the actual and normal rainfall of June for all districts of the province. The figures are derived from the average and actual rainfall of rain-recording stations in each district, due allowance being made for the area which each represents:—

Percentage Table for June 1895.

DIVISION.	DISTRICT.	Normal district rainfall for June.	Actual district rainfall for June 1895.	Percentage of actual to normal rainfall.	Percentage excess (+), deficit (-).

\* Mean for 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the humidity of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean at the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question station in the district sending in return divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 13th of July 1895.

last ten years. The variations are *negative* when the mean of the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting could amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal numbers received in the district t.o.s. from total rainfall at the sub-divisional during the past ten years. The means of the district are the numerical average of the rainfall returns received in the district t.o.s.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 13TH OF JULY 1895.**

It has been pointed out in previous reports that an important feature of the weather during the latter half of June and the early part of July was the low pressure which obtained in the south-western districts and the north-west angle of the Bay, and that this appeared to be the chief cause of the unequal distribution of rainfall during these weeks. The monsoon current was deflected westwards across the mouth of the Bay towards the Orissa coast, and unusually heavy rain fell at all the Orissa stations, while in North and East Bengal the falls were unusually deficient.

During the present week there has been an almost complete reversal of the conditions referred to above. Pressure, instead of being lowest in Orissa and the adjacent parts, has been lowest in the north-east of the province, and the rainfall in Assam and North Bengal has been almost phenomenal as to the amount that fell in the early part of the week. Bihar and Chota Nagpur have received more than the normal fall, but in Lower Bengal and Orissa, especially the latter, rainfall has been light and scattered and in places absent.

On the 7th, the first day of the week under review, pressure was lowest over North Bengal and the east of Bihar, and though pressure was above the normal at all stations, a faint depression was visible more through the air circulation which it gave rise to. There was an easterly current down the Assam Valley and as far west as Jalpaiguri, while in Lower Bengal directions were southerly, and in Chota Nagpur and Bihar, south-west or west. Heavy rain was falling at all the stations affected by the easterly winds, especially Sibsagar, Dhubri, and Jalpaiguri. On the 8th there was a slow fall of pressure over the hills and the adjacent part of the plains, and a slow rise further south. In consequence the depression was more distinct, but was further north as south-westerly winds were blowing at Dhubri. The heavy rain continued at Jalpaiguri and Dhubri, and the unsettled weather was felt as far west as Motihari. On the 9th, pressure fell almost everywhere, somewhat more quickly at the extreme northern stations, but a slight recovery was shown in part of North Bengal and Bihar, at such stations as Rangpur, Dinajpur, and Purnea. There was a small defect at Jalpaiguri, and a larger one at Darjeeling, and as winds were now south-west at both these places, the slight depression must have passed across the Himalayas. Heavy rain was still falling in North Bengal and North Bihar, being probably due to local thunderstorms which invariably follow the passage of a depression from the plains to the hill tracts. On the 10th pressure rose briskly in North Bengal and North Bihar, and the distribution, though rather high, was not very different from the normal one of the day. The unsettled weather, however, continued, and Dhubri and Jalpaiguri reported 11 and 7 inches of rain, respectively, while 3 inches fell at Darjeeling and Motihari. During the last three days of the week winds were becoming more normal in direction, south-easterly in North Bengal and easterly in Bihar. The rainfall became much less, though moderate showers were still falling in North Bengal.

During these days comparatively fine weather prevailed in Lower Bengal and Orissa. Showers were fairly general in the early part of the week, except in the 24-Parganas, Howrah, and Hooghly districts, where very little rain fell throughout. The scanty rainfall in these south-western districts was probably due to the ridge of high pressure which maintained its position over Orissa and part of South-West Bengal from day to day. It has been seen that the small changes of pressure in the north of the province gave rise to a very shallow depression which was accompanied by excessive rainfall. This rainfall ceased with the filling up of the depression, due to a rise of pressure of about .06 inch. Similarly, the inequality of about .05 inch in Orissa and South-West Bengal has led to a break in the rains of considerable duration.

**Pressure.**—Readings have been higher than the corresponding normal amounts at nearly all stations throughout the week, and changes have been small or moderate. Excess has been greatest in the south-west of the province, and as it has varied but little from day to-day, the means for these parts are much higher than is usual during a period when larger fluctuations are occurring. In South-West Bengal and Orissa mean excess varies from .1 inch to .12 inch, and in the other districts it is generally about .08 inch, at Sibsagar it is .05 inch, at Jalpaiguri .07 inch, and at Darjeeling the mean pressure is very nearly normal.

**Temperature** has been above the normal except in the north of the province and in Assam, that is, in the area of unsettled weather and heavy rainfall. Mean excess is  $1^{\circ}$  or more in Chota Nagpur, Orissa, and East Bengal; in South-West Bengal the mean temperature is normal, and in the other districts there has been defect of about half a degree in Bihar,  $1^{\circ}6$  in North Bengal, and  $3^{\circ}5$  in Assam.

**Rainfall.**—Excessive rain fell in Assam and North Bengal during the first four days of the week, and rather heavy falls occurred in Bihar and part of Chota Nagpur. On the other hand, in Orissa and the adjacent part of South-West Bengal falls were very scanty, and all the southern districts have received less than the normal amount. The falls at rain-measuring stations in the Kuch Bihar district were generally over 30 inches, in Jalpaiguri over 20 inches, and the fall at Dhubri was nearly 27 inches. The average fall for the whole of North Bengal is nearly 12 inches, more than four times the normal, and in Bihar it is nearly 4 inches with an excess of 1.4 inches. There is a small excess in Chota Nagpur and defect in Lower Bengal and Orissa, varying from one inch in South-West Bengal to more than two inches in Orissa.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 13th of July 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.

### DISTRICT ROAD FUND.

No. 3984R.C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Road Cess.

*Dated Calcutta, the 19th July 1895.*

### RESOLUTION.

#### READ—

Letter from the Accountant-General, Bengal, No. 315L.F., dated 12th July 1895, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 31st March 1895.

**RESOLUTION.**—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the 4th quarter of the year 1894-95 be published in the *Calcutta Gazette* and circulated to the officers concerned.

**ORDER.**—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded for information to the—

Commissioners of the Rajshahi, Chittagong, Bhagalpur and Chota Nagpur Divisions.

Superintending Engineers of the Northern and Western Circles.

Inspector of Works, Eastern Circle.

Financial Department of this Government.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE,  
*Secretary to the Govt. of Bengal.*

A. F. COX,

Accountant-General, Bengal.

No. 4085A.

## GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

## Accounts.

Dated Calcutta, the 23rd July 1895.

## RESOLUTION.

## READ—

The debate on the Bengal Provincial Service Budget for 1895-96, held in the Lieutenant-Governor's Council, on Saturday, the 30th March 1895, especially the remarks of the Hon'ble J. G. Womack on the subject of the purchase of stores in this country and the Lieutenant-Governor's reply.

## Read also—

- (1) The remarks of the Hon'ble Mr. Playfair, the Hon'ble Lieutenant-General Sir H. Brackenbury, and His Honour the Lieutenant-Governor on the same subject in the discussions of the Financial Statement of the Government of India for 1895-96, held in the Council of the Governor-General of India, which met on the 28th March 1895.
- (2) Letter from the Government of Bengal, Public Works Department, No. 4384A., dated 31st August 1894, submitting to the Government of India, Public Works Department, the statement of expenditure on stores in the General and Irrigation Branches of the Public Works Department in Bengal for the year 1893-94.
- (3) Letter from the Government of India, Finance and Commerce Department, No. 1426S.R., dated 25th March 1895, pointing out that, as it is understood several of the principal engineering firms in India now possess the apparatus necessary for the proper testing both of the raw material and of the finished product, the fullest use should be made, subject to the prescribed precautions, of the liberty to procure supplies in India.

**REMARKS.**—In his speech at the meeting of the Bengal Council on the 30th March 1895, read above, the Lieutenant-Governor proposed to take steps to have a return prepared annually and laid before the Council on the next recurring occasion to show what the nature of the stores is which are purchased in England and those purchased in India.

2. In fulfilment of the above promise, the following information is compiled and published, showing the operations of the Public Works Department of this Province in 1893-94 in respect of purchases of stores in England and locally.

3. The total cost of stores entirely obtained from England was Rs. 2,62,492, the principal items of which are the following:—

A	Paddle steamer to be used on the Sone Canals, Rs. 49,584. The hull was sent out from England in parts and was put together and the plates riveted and fixed at the Dehri Workshops, where the necessary wood-work, &c., were also supplied and fitted. The engines were imported in pieces, and, with the rest of the machinery, were fitted and fixed at these shops.
	Bruce's dredgers, for use on the Sone Canals, Rs. 19,528. The machinery and boiler for these dredgers were obtained from England, the former in pieces which were put together and fixed at the Dehri Workshops. The hull and other parts were made and the complete finishing up done at these shops.
	Vertical boiler, Rs. 3,891. One of Tangye's make, 7'-8" high and 3'-2" diameter with two cross tubes. It was sent out in one piece and erected through the agency of the Sibpur Workshops for the electric lighting at the Eden Gardens.
	Two steel boilers, Rs. 5,709. These were obtained in England from John Fowler & Co. for the Government steam launch <i>Aurora</i> . They came out whole and were fitted into the steamer at the Cuttack Workshops.
	Rolled iron joists, Rs. 17,168. These were required for use in the new Stationery Warehouse, the Campbell Hospital, and other buildings.
	T-iron, Rs. 20,353. These were obtained both for use in the roofs of above buildings as well as for general purposes at the several Government workshops.
	Corrugated iron sheets, Rs. 45,601. This material is largely used for sheds, latrines, walling, &c., and is consequently indented for regularly to meet the many demands for it.
	Plate steel, Rs. 3,889
	Angle iron, " 14,071
	Round iron, " 2,694
B	Plate " 18,966
	Flat " 4,359
	Mild steel sheet " 2,573
	Copper tape, " 3,850. This was brought on to the stock of the 1st Calcutta Division and distributed when lightning conductors were needed.
	Cement, Rs. 20,080 } These materials were obtained for use in the various new works Paints " 9,605 } and repairs executed to Government buildings.
	None of the articles named in group A, nor of the materials detailed under group B, could have been entirely manufactured in India, nor are they, as far

as Government knows, even sent out roughly made up to be finished at workshops in this country.

4. The total cost of stores of European manufacture purchased in India on the score of urgency was Rs. 35,540. The principal items which make up this total are the following:—

Corrugated iron sheets, Rs. 2,094. These sheets were urgently required for bridges on the Tirihana-Bagdogra Road, the early completion of which was necessary to maintain through communication.

Rolled iron joists, Rs. 17,359. These joists were required for repairs to several Calcutta buildings, special repairs to the Eden Sanitarium at Darjeeling, quadrennial repairs to buildings in the Balasore Division, and for urgent miscellaneous works executed at the Sibpur Workshops. These requirements were such as could not be foreseen and the indenting for these articles from England would have caused delay.

Plate iron, Rs. 2,859	{	These materials had to be purchased locally for the Sibpur Workshops in connection with urgent orders, which could not have been foreseen and which could not without delay have been kept in abeyance to allow of the articles being indented for from England.
Angle " " 4,310		
Flat " " 1,928		

Taking the India Office prices, and adding freight and packing charges, the cost of these articles, if purchased in England, would have been only Rs. 31,986, so that Government paid 11 per cent. more through buying them in India than it would have paid in England.

5. The total cost of stores manufactured in India, partly from imported material and partly from indigenous material, and substituted for stores formerly imported, was Rs. 85,315, the principal items being as follows:—

Iron mud barges, Rs. 35,464. These were for use on the Sone Canals and were made up chiefly from iron plates imported from England. The fitting, putting together and finishing off were done at the Dehri Workshops.

Cast-iron railings, Rs. 2,698	{	These were made up at the Sibpur Workshops for use in various Government buildings.
Cast-iron columns " 2,485		

Galvanized iron tanks, Rs. 1,440. These were required for storage purposes in connection with the supply of water, and were made up locally from imported galvanized iron sheets.

Galvanized iron pipes, Rs. 4,482. The pipes were procured from England in market lengths, but cut fitted and fixed at the several works where a water supply was being laid on.

Wrought-iron ladders of sizes, Rs. 1,135	{	These were required in connection with buildings, the former for giving access to roofs, and the latter for jails, treasuries, &c., and were made up at the Sibpur Government Workshops.
Ditto gratings of sizes " 3,506		

Wrought-iron screw shutters, Rs 1,627	{	These were needed for irrigation works in the province, and were made up at the Government Workshops at Dehri, Cuttack and Sibpur from imported material worked into its finished shape in this country.
Ditto framed shutters " 1,162		
Bolts, nuts and washers " 2,636		
Ditto for dredgers " 5,250		
Cast-iron pinion for dredgers " 3,000		

Iron work for lock gates " 9,843

Brass butt hinges, Rs. 2,326. Required for doors and windows in various buildings and made at the Sibpur Workshops.

Barakar pig iron, Rs. 3,205. Used for cast iron work done in the Government Workshops.

Rope, manilla, Rs. 1,752. Purchased for use by the Irrigation Department.

6. Corresponding information as to the transactions of 1894-95 will be published as soon as the figures are received.

7. The Lieutenant-Governor is anxious to carry out to the fullest extent possible the policy prescribed by the Government of India in their Resolution No. 1426S.R. of 25th March 1895, quoted above, and has addressed the principal firms in Calcutta to ascertain whether they are able to supply any of the articles mentioned in paragraph 3 of this Resolution, subject to the conditions (a) that they are not imported into India in a finished state, (b) that machinery exists for the application of sufficient tests as to quality and workmanship, and (c) that the price does not exceed the cost at which such articles can be procured through the Secretary of State for India.

ORDER.—Ordered, that a copy of this Resolution be published in the Supplement to the next issue of the *Calcutta Gazette*.

Ordered also that a copy of this Resolution be forwarded to the Bengal Chamber of Commerce, the Calcutta Trades' Association, and the Bengal National Chamber of Commerce.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE.

*Secretary to the Govt. of Bengal.*

WORKING OF THE ANTHROPOMETRIC SYSTEM FOR THE  
IDENTIFICATION OF OLD OFFENDERS IN THE  
LOWER PROVINCES.

No. 10552A., dated Calcutta, the 26th June 1895.

From—E. R. HENRY, Esq., I.C.S., Inspector-General of Police, L.P.,  
To—The Chief Secretary to the Government of Bengal.

In continuation of previous reports, I submit information of the progress made in the districts of the Lower Provinces in working the anthropometric system for the identification of old offenders.

1. Letter No. 1732, dated the 25th February 1893, from the Inspector-General of Police, Lower Provinces, to the Chief Secretary to the Government of Bengal.

2. Letter No. 6353, dated the 1st May 1894, from the Inspector-General of Police, Lower Provinces, to the Chief Secretary to the Government of Bengal.

Arrangements made in all districts for the early registration of unidentified accused, for their being measured, and a reference made to Central office before disposal of their cases.

In the reports specified in the margin of this paragraph, full explanation is given of the rules under which the system of measuring, selection of persons to be measured, classification of results, and system of search is carried out.

II.—I may now point out that in all districts attention is concentrated on unidentified accused criminals. As soon as a person is arrested on a charge of having committed an offence against property, if the local police are unable to ascertain or verify his antecedents, he is dealt with under the rules laid down for "unidentified" suspects. At each sub-division, the unit in these provinces of criminal

administration, there is a Court Sub-Inspector whose special duty it is to look after and prosecute police cases. This officer is required, as soon as an unidentified person is sent up in police custody, to enter his name and other particulars in a register, to forward by the first post this nominal roll to the Inspector-General's office, and to arrange for measuring him without delay. The object of this rule is to enable the Central office to maintain check, so that no unidentified accused shall, through omission, escape measurement.

The Court Sub-Inspector having taken the measurements and left thumb impression on a card in prescribed form, forwards it to the Central office and awaits a reply before the case against the accused is disposed of in Court. On receipt of the card, the Central office institute search, and if the identity of the suspect is made out, send a reply by return post informing the requisitioning Court officer of the suspect's real name and residence, and giving details of all previous convictions on record against him. On receipt, this reply is placed before the trying Magistrate, who, ordinarily, grants a remand to enable the prosecuting police to summon witnesses and prove the previous convictions in the manner required by law (section 511, C. P. C.).

III.—Much attention has been devoted to improving the means of enquiry within reach of the District Police. Under existing rules, when a person is convicted of certain specified offences, his name and details of the case are recorded in a book known as the Conviction

Register, the entries in which are scrutinised once a week by a Magistrate and authenticated by his signature. At the same time, a copy of the entries is forwarded to the police station which sent the accused for trial, where they are transcribed into Register XIII, which contains information concerning the past criminality of all persons resident within the police station jurisdiction, and corresponds for the station area with the Conviction Register for the district area.

For the use of the Court Police, indexes on an improved principle to this Register, for a period of from 10 to 20 years, for all districts have been prepared, and copies given to all Court offices. The indexing has been devised on a system, the salient points of which are that the confusion arising from the varying spelling of names is discounted, and the person and his father's name are simultaneously traced by the one process of search. In practice it answers admirably.

Each station officer has thus the means of ascertaining whether a resident of his jurisdiction has, or has not, been previously convicted, and must certify

accordingly when sending an accused for trial, or state that he cannot be identified. Court Sub-Inspectors check the certificates of the investigating police, certifying that they have searched their Conviction Register indexes. The preparation of these indexes has given much labour, but that it has not been given in vain is indicated by the results of previous convictions proved during 1894, the percentage being higher than ever previously obtained.

**IV.—The system now in force appears to provide the fullest check possible**

*Circumstances under which aid of anthropometry utilized.* under existing conditions, and when the accused is a resident of the district, or if resident of another

district, gives his correct name and residence, the Court Police require no assistance in verifying antecedents. It is only when the suspect is a foreigner or gives an incorrect name that the local police are powerless and have to apply to the Central office for information.

One of the successful cases of the year is a good instance of the effectiveness of the anthropometric system. A man was caught in Backergunge breaking open a box in a house which he had burglariously entered. Interrogatory was of no avail as he feigned dumbness. His measurements were taken before he was sent to the Civil Surgeon to be kept under observation. The Civil Surgeon certified the man to be dumb; the Central office, however, identified him as Saroda Charan Bose, an old offender, twice previously convicted, a resident of Khaitpara village in Khulna. Acting on this information the local police were able to produce evidence which satisfied the Judge at the trial that the accused was in reality Saroda Charan Bose of Khaitpara; that he was shamming dumbness, and that he was an old offender; he was sentenced to four years' imprisonment. But for the anthropometric system this criminal would doubtless have been treated with special leniency as an unfortunate suffering from the pitiable disability of loss of speech.

**V.—During the year 1894, of the persons sent for trial charged with**

*Successful cases of identification during 1894 and percentage of successful cases to total number of unidentified in all Bengal districts.* having committed offence against the person and property or property, the local police succeeded in identifying all but 536. Of these 536, the identity of 112, or nearly 21 per cent., was established by means of anthropometry upon information

supplied by the Central office, the previous convictions on record against these persons being duly established in Court. These figures represent results in their least favourable light, for of the 424 unidentified, only 375 were convicted; and as it is only in the case of these latter that establishing identity and proving previous criminality could have been of avail, the proportion of successful cases might be calculated accordingly. In addition, I find that 51 of the persons who remained unidentified at the close of the year were Nepalese, who came over the border and committed crime in Jalpaiguri and Champaran. The anthropometric system not being employed in Nepal, their identification by means of it was not to be hoped for. There were also 19 juveniles or women who, under our rules, are not measured. If, therefore, impossible cases are eliminated, it will be seen that the results obtained were as good as could have been expected in the second year of bringing the system into practical working, and may be thus stated:—Of the total number of unidentified persons convicted in Bengal districts, 23 per cent. were recognised by means of anthropometry and their previous criminality proved in Court. Successful cases came from 32 districts and the Railway Police. There were, besides, 28 identifications for the Calcutta Police, making a total for the Province of 140 successful cases.

In estimating the value of these results, it must be borne in mind that the Bengal system applies to dangerous criminals only, and that in addition to identifying, the Central office furnishes in all instances full information of previous criminality. "In Paris every person arrested for any offence is at once subjected to the process of measuring, and is sometimes photographed before being taken before a Magistrate. It would not be consistent with English ideas to entrust to the police an arbitrary power of measuring or photographing every person arrested, without regard to the necessity for the purposes of justice of discovering his antecedents and character." (Blue Book C 7263. The Report of the Committee appointed by the Secretary of State for the Home Department to enquire into the best means available for identifying

habitual criminals.) In Bengal the duty of measuring is entrusted to police officers at over 100 different centres, and not "as in Paris to a few incessantly-practised experts, working for many hours every day in the same room under skilled supervision." (Fingerprint Directories by F. Galton, F.R.S., London, 1875, page 56.) No comparison between the figured results obtained in France and Bengal can therefore be usefully instituted. I may add that the Committee whose report is quoted, are of opinion that in England it will be necessary to permanently record the measurements of about 4,500 convicts yearly, their selection being made upon considerations similar to those which have determined selection in Bengal. Their Report, presented to the House of Commons in 1894, recommends the adoption in England of a modified anthropometric system, the details of which correspond in all essential particulars with those of the system introduced in Bengal in the beginning of 1892. The one difference is that while advocating the employment of the measurements of length and breadth of head, left middle finger, forearm and foot for purposes of classification, they are of opinion that finger impressions should be substituted for height measurement as the sixth factor in classifying. So far the system of classifying adopted in this province, judged by the results of actual working, has answered well, and it is not under contemplation to make any change in it. As the number of cards increases, further sub-classification may be needed, and the thumb impression will then be made use of for the purpose.

VI.—In round numbers, 18,000 cards had been received for record up to

Criminal record for Province up to the end of 1894. the close of the year; 1,500 cards of deceased criminals were destroyed; in addition, 2,500 cards of prisoners undergoing long sentences have been

kept apart, to be brought into the search almirahs three months before the earliest date of expiry of sentence, the actual number of cards arranged in the search almirahs being thus reduced to 14,000. Bengal is thus building up a record of the criminality of all recidivists, which, in time, will be more complete and contain information in a more accessible form, than the record possessed by the police in England or in any English colony or dependency.

VII. Each year between 120 and 150 English-knowing officers, recruited

Number of police officers competent to measure and take finger impressions.

on the results of competitive examination for the post of Sub-Inspector, before being drafted to districts, are sent for three months to the Police Training School where, in addition to instruction

in other subjects, they are taught anthropometry in all its branches, and on leaving are competent not only to measure, but to fill in search slips and search for cards. There are now a large number of officers scattered over the districts of the province, who are competent measurers; they are periodically subjected to examination by the Deputy Inspectors-General and myself, and by the skilled measurers, who visit each district in turn, once in six months. Acquaintance with the working details of anthropometry and taking finger impressions has thus been widely diffused amongst the police. As already reported, officers have been trained for other provinces. Mr. Paget, District Superintendent, who received special instruction at the Central office, is now on deputation in the North-Western Provinces to assist in the introduction of anthropometry there. Inspector Ram Sadai Mukerjea, sent to instruct the Bombay Police, fulfilled his task so satisfactorily as to earn the special commendation of the Inspector-General, Commissioner of Police and of the other officers instructed. Copies of the pamphlet on "Criminal identification by means of Anthropometry in Bengal" have, at their request, been supplied to several Governments and Administrations, and also recently under orders from the India Office to the Home Office in England.

## WEATHER AND CROP REPORT.

*For the week ending the 22nd July, 1895.*

**Burdwan.**—Rainfall at Burdwan 56. Weather cloudy and hot. Transplantation of *aman* rice hindered through absence of rain, which is urgently wanted. Condition of cattle good. Fodder and water sufficient. Common rice sells from 10 to 20 seers a rupee.

**Midnapore.**—Rainfall at Sadar 57. Weather hot. More rain wanted. Rice sells from 16 to 22 seers a rupee.

**24-Parganas.**—Rainfall at Sadar 1·33. Weather showery with prospect of more rain. Prospects of *aus*, jute and sugarcane are fair in spite of scanty rain. Transplantation of *aman* going on in low lands. Fodder and water sufficient. Rice sells at—

	Srs. c.
Sadar	... 11 to 13 0 }
Barasat	... 15 0 }
Basirhat	... 18 13 }
Diamond Harbour	... 15 0 }

per rupee.

**Murshidabad.**—Rainfall not reported. State of sugarcane, *bhadoi* rice and jute are favourable. Indigo manufacture is proceeding. Fodder and water sufficient. Common rice sells at 16 seers per rupee.

**Khulna.**—Rainfall 1·30 at Khulna, 98 at Bagerhat, 1·12 at Satkhira. Weather hot. Transplantation of *aman* still continues. More rain wanted. Price of common rice 16 to 22 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 4·81. Weather hot and rainy. Standing crops doing well. Common rice sells at 14 seers a rupee. Cattle-disease in Thakurgaon decreasing.

**Rangpur.**—Average rainfall 6·36. Weather cloudy and rainy. Harvesting of *aus* paddy nearly completed. Transplanting of *aman* paddy and cutting of jute progressing. Fodder sufficient. Rice selling from 11 to 15 seers a rupee.

**Pabna.**—Rainfall 2·06. Weather hot and rainy. The flood water has damaged the crops on low lands. Prospects of crops on high lands good. Price of common rice stationary. Fodder sufficient.

**Dacca.**—Rainfall 1·08. Weather cloudy. The sudden rise of the river in the Manikganj subdivision has done some damage to *aus* and *aman* paddy. The extent of damage is being enquired into. Common rice sells at 19 seers per rupee. No cattle-disease. Fodder plentiful.

**Chittagong.**—Rainfall 6·94. Weather cooler. Cultivation of *aman* progressing. Water and fodder sufficient. Common rice selling at 18 seers per rupee.

**Patna.**—Rainfall 4·29 at Sadar, deficient at Barh and Bihar. It is quite sufficient for *bhadoi*, but more rain is much needed for transplantation of paddy. Condition of cattle good, and supply of fodder and water sufficient. Common rice selling from 17 to 18 seers per rupee.

**Gaya.**—Rainfall at Sadar 1·31. Paddy transplantation hindered by insufficient rain, but good rain today (22nd July). *Bhudoi* prospects favourable. Price of rice at Sadar 15 seers per rupee.

**Champaran.**—Rainfall at Motihari 1·22. Transplantation of *bhadoi* crops going on. Fodder for cattle sufficient.

**Darbhanga.**—Rainfall 1·63 at Sadar, 1·39 at Samastipur, 3·29 at Madhubani. Transplanting of paddy and *marua* going on. Common rice sells from 15½ to 17½ seers per rupee. Fodder and water sufficient.

**Bhagalpur.**—Weather hot and rainy. Rainfall 1·96. This was insufficient for transplantation of paddy except on very low lands, but it is raining heavily today (22nd July). Prospects on the whole good. Common rice sells at 17 seers 10 chitaks per rupee. Fodder and water sufficient.

**Purnea.**—Rainfall 5·49. Prospects of *bhadoi* crops and jute continue good. Transplantation of *aghani* going on favourably. No cattle-disease. Fodder and water sufficient. Common rice selling from 15 to 20 seers per rupee at Sadar.

**Cuttack.**—Rainfall 1·88. Weather seasonable. *Beali* being weeded. Transplantation in flooded tracts going on. More rain wanted. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 25 seers per rupee.

**Hazaribagh.**—Rainfall at Sadar 2·96. Sufficient rain has fallen all over the district. Transplanting operations in progress. All crops doing well. Fodder and water sufficient. Common rice selling at 13 to 16 seers per rupee at Sadar and 10 to 14½ seers per rupee at Giridi.

---

**General Summary.**—There was good general rain all over the province, except in the Burdwan and Presidency Divisions, where the falls were scanty. In almost all districts of these two Divisions the cultivation of the winter rice crop is much retarded, and in parts of Bihar and Orissa too more rain is required for transplanting operations. Prospects of all *bhadoi* crops, including *aus* rice and jute, and of sugarcane are generally favourable. In Pabna and Dacca the crops on low lands are reported to have been somewhat damaged by floods. Cattle-disease in Dinajpur is decreasing; in other districts the cattle are in good condition. The price of common rice continues almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
*The 23rd July, 1895.*

C. E. BUCKLAND,  
*Secretary to the Govt. of Bengal.*
